Hocquette, S. Gigli, 2023-08-28 The farming and agri food sectors are faced with an increasing demand by consumers for high quality products The current major questions are thus how to define quality and how to increase the quality of animal products to satisfy these new requirements

This is the reason why the Cattle Commission of the European Association of Animal Production EAAP organised a specific session on this topic at its Annual Meeting which was held in Bled Slovenia in September 2004 This session dealt with the manipulation and evaluation of bovine milk and meat composition and quality with various indicators commercial physical biochemical molecular or other These indicators are any method biological trait or physical property which may be useful to predict a quality trait Quality includes sensory traits nutritional properties of products their ability to be processed and also any consideration about traceability genetic geographic or nutritional traceability Thus the full spectrum of quality attributes are discussed Indicators may also be considered as predictors In this respect contributors discussed the detection early in life of the ability of animals to produce meat or milk of high quality Indicators may also be useful for consumers when they buy meat or milk as official or commercial signs of quality All the review papers and the short communications which were presented in this session will be in this EAAP publication entitled Indicators of milk and beef quality Additional papers either presented in 2003 in the EAAP Annual Meeting or from invited authors were added to complete the publication

*Muscular Contraction* Robert Malcolm Simmons,1992-06-26 Composed of a set of chapters contributed by past and present collaborators of the Nobel laureate Sir Andrew Huxley this book covers the areas of muscle research to which Huxley made major contributions The purpose of the book is to discuss the way that muscles work asking questions at a fundamental level about the molecular basis of muscle tone production and muscle contraction The majority of the chapters are concerned with muscle physiology and the relation between structure and function The process of activation of muscles is discussed along with the mechanism of contraction itself Although most of the book deals with vertebrate skeletal muscle several chapters cover cardiac muscle Also featured are two chapters discussing Sir Andrew s achievements in both nerve and muscle physiology

Surviving Hypoxia Peter W. Hochachka,Peter L. Lutz,Thomas J. Sick,Myron Rosenthal,2022-11-30 Surviving Hypoxia Mechanisms of Control and Adaptation is a synthesis of findings and thoughts concerning hypoxia The thermodynamics of hypoxia are discussed in detail including acid base balance and self pollution resulting from the accumulation of anaerobic end products The book focuses on descriptions and discussions of common facets contrasting solutions in a variety of physiological hypoxia defense strategies including those shown by plants invertebrates and vertebrates Special treatment is given to the distinctive problems that hypoxia presents to vulnerable organs such as the kidney liver and brain It also addresses pathological events in addition to protective mechanisms Clinical implications of basic research are examined in the book which provides new insights into underlying pathological processes occurring in hypoxic induced organ failure and indicates new paths for successful clinical intervention Surviving Hypoxia Mechanisms of Control and Adaptation is an excellent reference for all researchers interested in the physiological effects of hypoxia underlying pathological events and protective mechanisms

**The Development of the Sarcoplasmic Reticulum** Anthony Martonosi, 2003-09-02 Sarcoplasmic reticulum is a form of endoplasmic reticulum found in large quantities in mature muscle cells Anthony Martonosi presents general information about the development and function of the sarcoplasmic reticulum within a framework of contemporary research on the molecular biology of biosynthetic and signaling processes Focusing on the development of the sarcoplasmic reticulum Martonosi demonstrates the regulatory functions that control the production of its molecular components and investigates the interaction of these lipid and protein molecules with the myogenic neurogenic and hormonal stimuli present in developing muscle cells Martonosi provides extensive experimental support throughout the book

Mechanism of Muscular Contraction Jack A. Rall, 2014-10-21 This book describes the evolution of ideas relating to the mechanism of muscular contraction since the discovery of sliding filaments in 1954 An amazing variety of experimental techniques have been employed to investigate the mechanism of muscular contraction and relaxation Some background of these various techniques is presented in order to gain a fuller appreciation of their strengths and weaknesses Controversies in the muscle field are discussed along with some missed opportunities and false trails The pathway to ATP and the high energy phosphate bond will be discussed as well as the discovery of myosin contraction coupling and the emergence of cell and molecular biology in the muscle field Numerous figures from original papers are also included for readers to see the data that led to important conclusions This book is

David I. Mostofsky, Yngve Loyning, 2013-07-04 This volume is a first of its kind addressed principally to the professional reader While it is not intended to be exhaustive its aim is to sketch a broad picture of some of the nondrug and nonsurgical treatment strategies with a demonstrated basis in conventional scientific method Likewise though it does not include all those who have contributed to the emergence of this exciting new field it assembles those authors whose seminal work has earned them international reputations This volume's declared purpose is to provide a state of the art guide to methods and techniques in the behavioral treatment of epilepsy and to their basis in theory The editors hope that it will catalyze the evolution of their acceptance as standard elements where appropriate in the clinical activities of independent practitioners clinics and agencies that service those with convulsive disorders     **The Thorax -- Part A** Charis Roussos, 1995-08-30 This book provides a comprehensive authoritative and contemporary discussion of the physiology and pathophysiology of the chest wall as well as an overview of the diagnostic and therapeutic modalities It is an invaluable aid to clinical investigators

**Developmental Neurobiology of Breathing** Gabriel Haddad, 1991-06-28 This monograph provides a comprehensive basis for understanding the complex interactions that take place between synaptic input cellular properties and the oscillatory output of a neural network especially in the maturing or developing nervous system Emphasis is placed on drawing a parallel between     *Excitation-Contraction Coupling and Cardiac Contractile Force* Donald Bers, 2013-04-17 The main aim of this monograph is to provide an overview of calcium regulation in cardiac muscle cells particularly with respect to excitation contraction coupling and the control of cardiac contractile force It is my hope that this book will be useful to students of the cardiovascular system and muscle at all different levels and in different disciplines such as physiology

biochemistry pharmacology and pathophysiology I also hope that it will find use for those studying developmental comparative and disease processes as well as more integrative phenomenon I kept several goals in mind in writing this monograph First it should be easily readable Second I chose to include numerous illustrations and tables to help integrate results from numerous investigators in practical formats and also present key figures from important papers Thus this monograph may serve as a resource of information for people working in the areas described herein Third the presentation is a very personal one and I have necessarily drawn extensively on my personal experience in this field over the past 15 years This I think helps maintain a certain continuity of thought from chapter to chapter Fourth I have made serious attempts to make each chapter up to date despite the breadth of topics covered I have also tried to be equitable in choosing references while not intending to be comprehensive or exhaustive Neither of these aims can be perfectly matched and I apologize to the many investigators whose papers I have not cited but should have

**Muscle Foods** Burdette C. Breidenstein, Donald M. Kinsman, Anthony W. Kotula, 2013-03-09 Traditionally in the food industry there has been a distinction made among meat poultry seafood and game Meat has historically been defined as the edible flesh of animals This basically referred only to the red meats namely beef lamb pork and veal including both fresh and processed products as well as variety or glandular meats It has been recognized more recently that all foods derived from muscle or muscle foods have basically the same or similar characteristics in physical and chemical properties Therefore it is logical to examine and consider all muscle foods under one cover This book therefore is an attempt to address the various attributes of red meat poultry fish and game under the single heading of muscle foods and to note any differences where they might OCCUT It is of interest that of the 10 top V S meat companies in 1990 8 of them were dealing with poultry as well as red meats and that 4 of the 10 were also involved with seafoods This lends impetus to the inclusion of all three in a book such as this Furthermore the rapid increase in consumption of poultry meat to approximately 30 kg 65 pounds per capita and seafoods to 7 kg 16 pounds per capita compared to beef at 34 kg 75 pounds and pork at 30 kg 65 pounds whereas veal and lamb mutton represent only 0

**Electrical Trauma** E. G. Cravalho, J. F. Burke, 1992-10-22 This comprehensive 1992 treatise was the first on electrical trauma in humans

Cardiac Energetics R. Jacob, Hanjoerg Just, C. Holubarsch, 2013-04-17 Assessment of cardiac energetics at the level of ATP synthesis chemomechanical energy transformation and whole organ dynamics as a function of haemodynamic load ventricular configuration and oxygen and substrates supply is basic to understanding cardiac function under physiological and pathophysiological hypertrophy hypoxia ischaemia and heart failure conditions Moreover cardiac energetics should be an important consideration in the choice and application of drugs especially in the case of vasodilators inotropic agents and in cardioprotective measures Only by considering energetics at the subcellular cellular and whole heart level we can arrive at a better understanding of cardiac performance and ultimately better clinical judgement and drug therapy Quantification of myocardial energetics will also help to determine the optimal time for surgical interventions such as valvular replacement or

aneurysm resection The present volume is the outcome of an international symposium on cardiac energetics held in Gargellen Montafon Austria June 1986 The contributions will certainly help bridge the existing gap between basic research involving isolated structures and that involving the whole organ on the one hand and render the results derived from basic research applicable to clinical problems on the other hand *Respiratory-Circulatory Interactions in Health and Disease* Steven M. Scharf, Michael R. Pinsky, Shelly Magder, 2001-04-27 This book describes the basic pathophysiologic and clinical importance of the reciprocal relationships and interactions between the respiratory and cardiovascular systems examining mechanical responses caused by lung volume and thoracic pressure Emphasizes humoral and neurophysical interactions occurring in diseases that lead to cardiorespi

**The Facial Nerve** E. Stennert, O. Michel, 2012-12-06 The intention of the VIIth International Symposium on the Facial Nerve was to create a platform for an extensive exchange of knowledge and scientific information between clinicians and basic research workers This aim could only be realized on the basis of a common interest in the facial nerve which unites the interdisciplinary scientific efforts of otologists neurosurgeons facial plastic surgeons neurologists neurophysiologists and neuroanatomists Therefore a meeting of this kind remains in its aim to exchange ideas over scientific disciplines which do not come unique together normal conditions The symposium has been held every four years since 1966 The VIIth symposium was preceded by symposia in Stockholm 1966 Osaka 1970 Zurich 1976 Los Angeles 1980 Bordeaux 1984 and Rio de Janeiro 1988 and marked an important milestone in the continuously developing knowledge about the facial nerve its physiology disorders diagnostics and treatment In contrast to the previous meetings this symposium extended invitations to both clinicians and basic research workers More than 350 scientists from 25 different nations met in Cologne Germany in June 1992 and their high level presentations contributed to the overwhelming success of this international meeting The symposium took place in the vicinity of the old cathedral of Cologne itself a vivid symbol of never ending efforts to create something perfect and lasting *The Thorax: Applied physiology* Charis Roussos, 1995 This book provides a comprehensive authoritative and contemporary discussion of the physiology and pathophysiology of the chest wall as well as an overview of the diagnostic and therapeutic modalities It is an invaluable aid to clinical investigators
