Methods in Plant Electron Microscopy and Cytochemistry William V. Dashek,2000-06-29 Hands on experimentalists describe the cutting edge microscopical methods needed for the effective study of plant cell biology today These powerful techniques all described in great detail to ensure successful experimental results range from light microscope cytochemistry autoradiography and immunocytochemistry to recent developments in fluorescence confocal and dark field microscopies Important advances in both conventional and scanning electron microscopies are also fully developed together with such state of the art ancillary techniques as high resolution autoradiography immunoelectron microscopy X ray microanalysis and electron systems imaging Easy to use and up to date *Methods in Plant Electron Microscopy and Cytochemistry* offers today s plant scientists a first class collection of readily reproducible light and electron microscopical methods that will prove the new standard for all working in the field *CRC Handbook of Plant Cytochemistry: Other cytochemical staining procedures* ,1987 **CRC Handbook of Plant Cytochemistry** K.C. VAUGHN (ed),1987 *Immunocytochemistry of Plant Cells* Kevin Vaughn,2013-03-27 Immunocytochemistry of plant cells is the first book exclusively dedicated to this topic The first and largest portion of the book is concerned with a group of proven protocols and variations on these protocols that might prove useful many developed or modified in the author s laboratory The second portion of the book covers the studies that have been published previously on each of the plant organelles Numerous state of the art micrographs from researchers around the world are included to demonstrate typical results Electron Microscopy of Plant Cells C Hawes,2012-12-02 *Electron Microscopy of Plant Cells* serves as manual or reference of major modern techniques used to prepare plant material for transmission and scanning electron microscopy There have been other books that generally discuss electron microscope methodology This book focuses on problem areas encountered through the presence of tough cell walls and large central vacuole It details preparative techniques for botanical specimens Each of the nine chapters of this book covers the basic principles useful applications and reliable procedures used on the method of electron microscopy Other topics discussed in each chapter include the general preparation and straining of thin sections quantitative morphological analysis and enzyme cytochemistry This book also explains the immunogold labelling rapid freezing methods and ambient and low temperature scanning electron microscopy among others This book will be invaluable to general scientists biologists botanists and students specializing in plant anatomy International Review of Cytology ,1991-09-25 *International Review of Cytology*

CRC Handbook of Plant Cytochemistry: Cytochemical localization of enzymes ,1987 **Plant Mycobiome** Younes M. Rashad,Zakaria A. M. Baka,Tarek A. A. Moussa,2023-04-03 Plant mycobiome represents a diverse array of plant associated communities of endophytic and epiphytic fungi These communities fundamentally affect plant health development

adaptation and communication with the surrounding ecosystem Furthermore they have key roles in the establishment diversification productivity and sustainability of different natural ecosystems However some of these communities are pathogenic for the plant itself or dangerous for the consumers due to the production of mycotoxins In other words plant mycobiome represents two faces of a coin This book aimed to explore contributions of the plant mycobiome in plant environment interactions from different perspectives Chapters of this book address numerous themes covering the recent advances in roles diversity and dynamics of these fungi as biocontrol agents biofertilizers growth promoters and their secondary metabolites in the area of crop improvement for sustainability and biotechnology as well as the plant pathogenic and toxigenic fungi This book will be useful to postgraduate students botanists mycologists ecologists plant pathologists and physiologists

Plant Pathogenesis and Disease Control Hachiro Oku,2020-10-28 Environmental pollution resulting from widespread pesticide application has become a serious worldwide problem Plant Pathogenesis and Disease Control is an important new reference that addresses this problem by exploring the biochemical and molecular mechanisms of plant pathogenesis and emphasizing the use of pest control agents rather than pesticides for plant disease control Topics examined include pathogenicity the resistance of plants against pathogens the offensive and defensive struggle between hosts and parasites methods for using natural defense mechanisms to develop environmentally sound disease control agents and the use of modern biotechnology for plant disease control The book will be an essential reference for phytopathologists plant biochemists pesticide chemists mycologists plant cell technologists and agricultural researchers

Molecular and Cellular Aspects of Plant Reproduction Rod J. Scott,A. D. Stead,1994-11-24 Molecular aspects of flower morphogenesis for researchers and students from SEB Seminar The book will appeal to students and researchers in floral physiology

Histological and Histochemical Methods, fifth edition John Kiernan,2015-06-08 This fifth edition of Histological and Histochemical Methods continues to provide a clear and consistent introduction to the techniques description and analysis of the chemical and physical principles of fixation tissue processing staining enzyme location immunohistochemistry and other key procedures The overall structure of the book remains unchanged but the content has been heavily revised to update the techniques used in line with recent technological advances Additionally there are new sections on Artefacts and troubleshooting Methods for microorganisms and fungi in sections Methods for various pigments and mineral deposits in tissues Methods for skeletal elements bone cartilage in whole mounts Histological and Histochemical Methods 5e is essential reading for students lecturers researchers and professionals using histological and histochemical techniques From reviews Histological and Histochemical Methods is a tour de force wholly suited to the modern age of histology and Professor Kiernan has triumphed again To cover so much ground clearly and concisely while including the justification of the underlying chemistry makes this book unique There should not be a histology laboratory or an undergraduate library that does not own a copy Biotechnic Histochemistry 2016 91 2 145 This book should be present on the bookshelves of every research or

analysis laboratory where histology and histochemistry are routinely used as an essential reference source of basic and practical information for scientists and technicians European Journal of Histochemistry 2016 vol 60

Bacterial Pathogenesis, 1998-07-01 Established almost 30 years ago Methods in Microbiology is the most prestigious series devoted to techniques and methodology in the field Now totally revamped revitalized with a new format and expanded scope Methods in Microbiology will continue to provide you with tried and tested cutting edge protocols to directly benefit your research Focuses on the methods most useful for the microbiologist interested in the way in which bacteria cause disease Includes section devoted to Approaches to characterising pathogenic mechanisms by Stanley Falkow Covers safety aspects detection identification and speciation Includes techniques for the study of host interactions and reactions in animals and plants Describes biochemical and molecular genetic approaches Essential methods for gene expression and analysis Covers strategies and problems for disease control

Transgenic Plants, 2012-12-02 Volumes 1 and 2 of Transgenic Plants assemble important information on transgenic crops which has appeared scattered in many different publications These two volumes are a significant milestone in plant agricultural biology promote the practical application of recombinant DNA technology and assist in transforming the agricultural industry

Plant Biotechnology and In Vitro Biology in the 21st Century Arie Altman, Meira Ziv, Shamay Izhar, 2012-12-06 Achievements today in plant biotechnology have already surpassed all previous expectations Plant biotechnology integrated with classical breeding is now on the verge of creating the evergreen revolution to solve the world's envisaged triple demand for food agricultural commodities and natural products New biotechnologies are being continuously adapted to agricultural practices opening new vistas for plant utilization Plant biotechnology is changing the plant scene in three major areas 1 growth and development control vegetative generative and propagation 2 protecting plants against the ever increasing threats of abiotic and biotic stress 3 expanding the horizons by producing specialty foods biochemicals and pharmaceuticals The potential for improving plant and animal productivity and their proper use in agriculture relies largely on newly developed DNA biotechnology and molecular markers These techniques enable the selection of successful genotypes better isolation and cloning of favorable traits and the creating of transgenic organisms of importance to agriculture These areas were extensively discussed at the 9th international congress of the International Association of Plant Tissue Culture and Biotechnology Plant Biotechnology and In Vitro Biology in the 21st Century which was held in Jerusalem in June 1998 The present book of proceedings contains the variety of scientific achievements and techniques that were presented Basic and Applied Aspects of Growth Development and Differentiation Genetic Manipulations Transformation and Gene Expression Hybridization Haploidization and Mutagenesis Genetic Stability and Instability Selection and Variability Regulation of Primary and Secondary Metabolism Model Systems Cell Cycle Transport and Signal Transduction Biotechnology for Plant Protection Abiotic and Biotic Stress Biotechnology for Crop Improvement Yield Quality and Production of Valuable Substances Novel Micropropagation Methods New Markets and

Commercial Applications Intellectual Property Rights *Cell Separation in Plants* Daphne J. Osborne, Michael B. Jackson, 2013-06-29 This NATO Advanced Research Workshop held 25-30 September 1988 at the Villa Gualino Turin Italy was the first international meeting of its kind to be devoted solely to cell separation in plants. The partial or complete dissociation of one cell from another is an integral process of differentiation. Partial cell separations are basic physiological components of the overall programme of plant development. Complete cell separations are major events in the ripening of fruits and the shedding of plant parts. Unscheduled cell separations commonly occur when tissues are subjected to pathogenic invasion. Environmental stresses too evoke their own separation responses. Over the past five years much new knowledge has been acquired on the regulation of gene expression in specific stages of cell differentiation. Specific molecular markers have been identified that designate the competence of cells for achieving separation. Certain of the chemical signals/hormones/elicitors that must be emitted or perceived by cells to initiate and sustain separation are now known to us and the resulting cell wall changes have come under close chemical scrutiny. The Turin meeting was a focus for those currently involved in such investigations. It assessed factors controlling cell separation in a wide spectrum of different cell types under a variety of conditions.

Air Pollutants and the Leaf Cuticle Kevin E. Percy, J. Neil Cape, Richard Jagels, Caroline J. Simpson, 2013-06-29 Plant leaves are covered by a thin lipoidal non-living membrane called the cuticle. Forming the interface between plants and the atmospheric environment it presents an effective barrier to pollutant entry. The book provides a comprehensive review of air pollutant effects on the cuticle and covers the following thematic areas: Cuticular physicochemical characteristics; physiological regulatory and protective roles; Effects mechanisms and consequences of air pollutant interaction with leaf cuticles; Non-anthropogenic and environmental influences on the cuticle and potential of the cuticle for biomonitoring and critical levels mapping; New developments in experimental methodology and analytical techniques.

Food Enzymes: Structure and Mechanism Dominic W.S. Wong, 1995-12-31 *Food Enzymes: Structure and Mechanism* is the first volume to bring together current information on the structures and mechanisms of important food enzymes. It provides an in-depth discussion of the dynamic aspects of enzyme structures and their relationship to the chemistry of catalysis. The book emphasizes aspects of the chemistry of enzyme structure and mechanism seldom covered in the food science literature. It includes a thorough discussion of the genetic modification of enzyme structures and functions with reference to specific food enzymes. More than 100 illustrations enhance the clarity of important concepts. Comprehensive references reflect the current state of knowledge on enzyme actions.
