Artificial Intelligence for Advanced Problem Solving Techniques Vlahavas, Ioannis, Vrakas, Dimitris, 2008-01-31. One of the most important functions of artificial intelligence automated problem solving consists mainly of the development of software systems designed to find solutions to problems. These systems utilize a search space and algorithms in order to reach a solution. Artificial Intelligence for Advanced Problem Solving Techniques offers scholars and practitioners cutting edge research on algorithms and techniques such as search domain independent heuristics, scheduling, constraint satisfaction, optimization, configuration, and planning, and highlights the relationship between the search categories and the various ways a specific application can be modeled and solved using advanced problem solving techniques. Knowledge-Driven

Computing Carlos Cotta, Simeon Reich, Antoni Ligeza, 2008-05-30. The main aim of this volume has been to gather together a selection of recent papers providing new ideas and solutions for a wide spectrum of Knowledge Driven Computing approaches. More precisely, the ultimate goal has been to collect new knowledge representation, processing, and computing paradigms which could be useful to practitioners involved in the area of discussion. To this end, contributions covering both theoretical aspects and practical solutions were preferred. Logics in Artificial Intelligence Sarah Gaggl, Maria Vanina

Galton,1993 *Logic, Language and Reasoning* Hans Jürgen Ohlbach,U. Reyle,2012-12-06 th This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995 Dov is one of the most outstanding and most productive researchers we have ever met He has exerted a profound influence in major fields of logic linguistics and computer science His contributions in the areas of logic language and reasoning are so numerous that a comprehensive survey would already fill half of this book Instead of summarizing his work we decided to let him speak for himself Sitting in a car on the way to Amsterdam airport he gave an interview to Jelle Gerbrandy and Anne Marie Mineur This recorded conversation with him which is included gives a deep insight into his motivations and into his view of the world the Almighty and of course the role of logic In addition this volume contains a partially annotated bibliography of his main papers and books The length of the bibliography and the broadness of the topics covered there speaks for itself *Proceedings of the First International Scientific Conference "Intelligent Information Technologies for Industry" (IITI'16)* Ajith Abraham,Sergey Kovalev,Valery Tarassov,Václav Snášel,2016-05-10 This volume of Advances in Intelligent Systems and Computing contains papers presented in the main track of IITI 2016 the First International Conference on Intelligent Information Technologies for Industry held in May 16 21 in Sochi Russia The conference was jointly co organized by Rostov State Transport University Russia and V B Technical University of Ostrava Czech Republic with the participation of Russian Association for Artificial Intelligence RAAI and Russian Association for Fuzzy Systems and Soft Computing RAFSSC The volume is devoted to practical models and industrial applications related to intelligent information systems The conference has been a meeting point for researchers and practitioners to enable the implementation of advanced information technologies into various industries Nevertheless some theoretical talks concerning the state of the art in intelligent systems and soft computing are included in the proceedings as well Formal Ontology in Information Systems M. Donnelly,G. Guizzardi,2012-07-13 The complex information systems which have evolved in recent decades rely on robust and coherent representations in order to function Such representations and associated reasoning techniques constitute the modern discipline of formal ontology which is now applied to fields such as artificial intelligence computational linguistics bioinformatics GIS conceptual modeling knowledge engineering information retrieval and the semantic web Ontologies are increasingly employed in a number of complex real world application domains For instance in biology and medicine more and more principle based ontologies are being developed for the description of biological and biomedical phenomena To be effective such ontologies must work well together and as they become more widely used achieving coordinated development presents a significant challenge This book presents collected articles from the 7th International Conference on Formal Ontologies FOIS held in Graz Austria in July 2012 FOIS is a forum which brings together representatives of all major communities involved in the development and application of ontologies to explore both theoretical issues and concrete applications in the field The book is organized in eight sections each of which deals with the ontological aspects of bioinformatics physical entities artifacts and human

resources ontology evaluation language and social relations time and events representation and the methodological aspects of ontological engineering Providing a current overview of developments in formal ontology this book will be of interest to all those whose work involves the application of ontologies and to anybody wishing to keep abreast of advances in the field

automata theory to theoretical computer science in general *Enterprise Information Systems* Joaquim Filipe, José Cordeiro, 2011-03-14 This book contains substantially extended and revised versions of the best papers from the 12th International Conference on Enterprise Information Systems ICEIS 2010 held in Funchal Madeira Portugal June 8 12 2010 Two invited papers are presented together with 39 contributions which were carefully reviewed and selected from 62 full papers presented at the conference out of 448 submissions They reflect state of the art research work that is often driven by real world applications thus successfully relating the academic with the industrial community The topics covered are databases and information systems integration artificial intelligence and decision support systems information systems analysis and specification software agents and internet computing and human computer interaction FM 2009: Formal Methods Ana Cavalcanti, Dennis Dams, 2009-10-26 th FM 2009 the 16 International Symposium on Formal Methods marked the 10th anniversary of the First World Congress on Formal Methods that was held in 1999 in Toulouse France We wished to celebrate this by advertising and organizing FM 2009 as the Second World Congress in the FM series aiming to once again bring together the formal methods communities from all over the world The statistics displayed in the table on the next page include the number of countries represented by the Programme Committee members as well as of the authors of submitted and accepted papers Novel this year was a special track on tools and industrial applications Submissions of papers on these topics were especially encouraged but not given any special treatment It was just as hard to get a special track paper accepted as any other paper What we did promote however was a discussion of how originality contribution and soundness should be judged for these papers The following questions were used by our Programme Committee Kripke's Worlds Olivier Gasquet, Andreas Herzig, Bilal Said, François Schwarzentruher, 2013-11-20 Possible worlds models were introduced by Saul Kripke in the early 1960s Basically a possible world's model is nothing but a graph with labelled nodes and labelled edges Such graphs provide semantics for various modal logics alethic temporal epistemic and doxastic dynamic deontic description logics and also turned out useful for other nonclassical logics intuitionistic conditional several paraconsistent and relevant logics All these logics have been studied intensively in philosophical and mathematical logic and in computer science and have been applied increasingly in domains such as program semantics artificial intelligence and more recently in the semantic web Additionally all these logics were also studied proof theoretically The proof systems for modal logics come in various styles Hilbert style natural deduction sequents and resolution However it is fair to say that the most uniform and most successful such systems are tableaux systems Given logic and a formula they allow one to check whether there is a model in that logic This basically amounts to trying to build a model for the formula by building a tree This book follows a more general approach by trying to build a graph the advantage being that a graph is closer to a Kripke model than a tree It provides a step by step introduction to possible worlds semantics and by that to modal and other nonclassical logics via the tableaux method It is accompanied by a piece of software called LoTREC www.irit.fr/Lotrec LoTREC allows to check whether

a given formula is true at a given world of a given model and to check whether a given formula is satisfiable in a given logic. The latter can be done immediately if the tableau system for that logic has already been implemented in LoTREC. If this is not yet the case, LoTREC offers the possibility to implement a tableau system in a relatively easy way via a simple graph-based interactive language.

Description Logic, Theory Combination, and All That Carsten Lutz, Uli Sattler, Cesare Tinelli, Anni-Yasmin Turhan, Frank Wolter, 2019-06-25. This Festschrift has been put together on the occasion of Franz Baader's 60th birthday to celebrate his fundamental and highly influential scientific contributions. The 30 papers in this volume cover several scientific areas that Franz Baader has been working on during the last three decades, including description logics, term rewriting, and the combination of decision procedures. We hope that readers will enjoy the articles gathered in Franz's honour and appreciate the breadth and depth of his favourite areas of computer science.

The Laws of Belief Wolfgang Spohn, 2012-03-29. Wolfgang Spohn presents the first full account of the dynamic laws of belief by means of ranking theory, a relative of probability theory which he has pioneered since the 1980s. He offers novel insights into the nature of laws, the theory of causation, inductive reasoning, and its experiential base, and a priori principles of reason.
