Ecology and Evolution of Darwin's Finches (Princeton Science Library Edition) Peter R. Grant, 2017-03-14 After his famous visit to the Gal pagos Islands Darwin speculated that one might fancy that from an original paucity of birds in this archipelago one species had been taken and modified for different ends This book is the classic account of how much we have since learned about the evolution of these remarkable birds Based upon over a decade s research Grant shows how interspecific competition and natural selection act strongly enough on contemporary populations to produce observable and measurable evolutionary change In this new edition Grant outlines new discoveries made in the thirteen years since the book s

Beautiful Trauma Rebecca Fogg,2023-04-04 A compelling account of surviving a freak accident and a fascinating exploration of the science of trauma and recovery Late one night while Rebecca Fogg was alone in her apartment her hand was partially amputated in an explosion Quick thinking saved her life but the journey to recovery would be a slow one As the doctors rebuilt her hand Rebecca who also survived 9 11 began rebuilding her sense of self by studying the physical and psychological process of recovery Interspersing the personal with the medical Rebecca charts her year of rehabilitation touching on the marvelously adaptable anatomy of the hand how the brain's fight or flight mechanism enables us to react

instantly to danger and why trauma causes some people to develop PTSD and gives others a whole new lease on life Told with emotional and intellectual clarity Beautiful Trauma is a celebration of the resilience of the human spirit and the wonder of the human hand

Invisible Hands, Russian Experience, and Social Science Stefan Hedlund, 2011-06-20 This book investigates cases in which national and international activities have gone massively wrong entailing seriously negative consequences and in which the sophisticated analytical models of social science have ceased to be helpful Illustrations range from the global financial crisis to the failure to achieve speedy systemic change in the former Soviet Union and the failure to achieve development in the Third World The analysis uses as a backdrop long term Russian history and short term Russian encounters with unrestrained capitalism to develop a framework that is based in the so called new institutionalism Understanding the causes of systemic failure is shown to require an approach that spans across the increasingly specialized subdisciplines of modern social science Demonstrating that increasing theoretical sophistication has been bought at the price of a loss of perspective and the need for sensitivity to the role of cultural and historical specificity the book pleads the case for a new departure in seeking to model the motives for human action

Recent Advances in Multimedia Signal Processing and Communications Mislav Grgic, Kresimir Delac, Mohammed Ghanbary, 2009-09-30 The rapid increase in computing power and

communication speed coupled with computer storage facilities availability has led to a new age of multimedia applications. Multimedia is practically everywhere and all around us; we can feel its presence in almost all applications ranging from online video databases, IPTV, interactive multimedia, and more recently in multimedia-based social interaction. These new growing applications require high quality data storage, easy access to multimedia content, and reliable delivery. Moving ever closer to commercial ployment also aroused a higher awareness of security and intellectual property management issues. All the aforementioned requirements resulted in higher demands on various areas of research: signal processing, image/video processing and analysis, communication protocols, content search, watermarking, etc. This book covers the most prominent research issues in multimedia and is divided into four main sections: i) content-based retrieval, ii) storage and remote access, iii) watermarking and copyright protection, and iv) multimedia applications. Chapter 1 of the first section presents an analysis on how color is used and why it is crucial in nowadays multimedia applications. In chapter 2, the authors give an overview of the advances in video abstraction for fast content browsing, transmission, retrieval, and skimming in large video databases, and chapter 3 extends the discussion on video summarization even further. Content retrieval problem is tackled in chapter 4 by describing a novel method for producing meaningful segments suitable for MPEG-7 description based on binary partition trees (BPTs).
