Handbook of Neurochemistry Abel Lajtha, 2013-11-09 **Acta Biotechnologica. Volume 6, Number 2**, 2022-03-21 No detailed description available for ACTA BIOTECHNOLOGICA V 6 2 ABTECH E BOOK Receptors in the Nervous System Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands Alterations of Metabolites in the Nervous System Abel Lajtha, 2013-11-11 In neurosciences one may say All roads lead to Rome It seems as though wherever one starts the course of investigation leads to the same major questions about nervous system function and dysfunction In thinking about what to write in this preface it occurred to me that it might be best to deal with that with which I am most familiar and to trace to some extent my own road to Rome As I look over my work of the last 37 years it becomes clear to me that it can be epitomized as a search for patterns What usually began as a single minded devotion to in depth analysis of one or a small number of variables always has led to questions of how the results might relate to the whole living unit whether it is cell tissue or organism For a number of years after my discovery in the vertebrate central nervous system of γ aminobutyric acid GABA and the enzyme which forms it L glutamate decarboxylase GAD and the identification of GABA as a major inhibitory neurotransmitter by others I felt that my laboratory largely biochemical was wandering in the wilderness of the complexities of the vertebrate CNS without definitively coming to terms with problems related to GABAergic transmitter functions and the roles of GABA neurons in information processing **Neurochemical Systems** Abel Lajtha, 2013-03-14

CSA Neurosciences Abstracts, 1985 Monthly with annual subject and author indexes Worldwide coverage of journal articles papers presented and books focused primarily on basic research in vertebrate and invertebrate neurosciences

Arranged under broad topics e g genetics sleep and neurophysiology as well as miscellaneous topics book notices and proceedings Author subject indexes Chemical and Cellular Architecture Abel Lajtha,2013-04-18 After the completion of the first edition of this series this editor thought that a new edition would not be warranted in less than 15 perhaps 20 years but it seems that we live in a time in which rapid changes are the norm and findings in a field such as neurochemistry develop exponentially The task of a future editor attempting to get a comprehensive neurochemical handbook for the year 2000 would be even less enviable but by then information processing may be very different The approach the design and the areas covered by each volume and each chapter are necessarily arbitrary and it is likely that other editors or authors would have approached the coverage or the organization in a different manner It is hoped however that readers will find the series helpful for beginning or for continuing work There may be some overlap among the various chapters but insisting on single coverage of an area would at times have restricted treatment to only one point of view and might have truncated and hurt the logical flow of some of the chapters **Metabolism in the Nervous System** Abel Lajtha,2013-03-09 This volume is

concerned with metabolic reactions occurring in the nervous system Some time ago it was thought that since most of the intermediary metabolism that can be observed in the brain is not specific to this organ there is little justification in studying neural metabolism as such Later it was realized that for an understanding of neural functions the understanding of metabolism in the brain and its alterations is essential All aspects of the metabolism of a substrate in brain or all metabolic reactions of the nervous system could not be included in this volume some will be dealt with in other volumes such as the ones covering metabolic turn over alterations of metabolism or pathology Review of the aspects covered here clearly shows that the study of metabolic reactions in the nervous system is a very active field producing important results As in so many areas of research as we learn more new aspects become known new questions emerge and we see that in solving some problems we open areas with many additional problems to solve But the accomplishments to date are impressive and indicate further important advances in the future Brain metabolism is more active more plastic and more comprehensive than previously estimated It is an essential part of brain function and with its alteration brain function will be altered This shows the importance of more knowledge in this area It is hoped that this volume will be of assistance in such further studies

Subject Guide to Books in Print ,1996 Structural Elements of the Nervous System Abel Lajtha,2013-03-09 Neurochemistry having the objective of elucidating biochemical processes subserving nervous activity emerged as an application of chemistry to the of neurobiological problems as a post World War II phenomenon investigation However only in the last 40 years has the chemical community recognized neurochemistry as a distinct if hybrid discipline During this period great strides have been made However recently neurochemistry along with neurophysiology neuropharmacology neuroanatomy and the behavioral sciences has emerged to form neuroscience a new community of scientists with its own national society journals and meetings Actually this recently formed hybrid neuroscience is in the process of merging with

another well established discipline molecular genetics frequently called molecular biology and itself a hybrid which appears to have sufficient hybrid vigor to form yet a new community of scientists which for want of a more imaginative term has been called molecular genetic neuroscience Clearly advantages resulting from such mergers or hybridizations accrue not only from the merging discipline neurochemistry in this case to the new community molecular genetic neuroscience but also in the reverse direction This Foreword will be concerned primarily with examples of this latter process **Books in Print**

Manzo,1985-07-30 *Alterations of Chemical Equilibrium in the Nervous System* Abel Lajtha,2013-11-21 It has been recognized for more than a thousand years that the function of the brain like the function of the other organs of the body is determined by its physical chemical and biological properties Evidence that even its highest functions could be explained by these properties was gathered only in recent years however these findings which clearly have to be confirmed by a great deal of further experimental evidence indicate that most if not all of the functions of the brain are based on its bio chemical and biophysical mechanisms This at first hearing may sound rather simple but the ability to understand learning emotion perhaps even creativity on biological terms may well be the most important scientific discovery of all time Few pieces of knowledge can influence our future health and well being to the degree that understanding of mental mechanisms will It has been clearly shown in many ways in the previous volumes of this Handbook that from the biochemical or neurochemical point of view the brain is one of the most active organs The brain seems stable and in some respects permanent this is evidence not of inactivity but of carefully controlled homeostasis of dynamic rather than static equilibrium with most components undergoing metabolic alterations Biochemistry of Brain Sudhir Kumar,2013-10-22 Biochemistry of Brain is a collection of articles dealing with the developments in the biochemistry of the brain This book gives a comprehensive and critical discussion of important developments in studies concerning the above subject This text discusses the structure function and metabolism of glycosphingolipids which are related to the study of sphingolipid storage diseases Inborn defects of metabolism are found in Gaucher s and Fabry s disease which are characterized by lipid accumulation in the brain Another paper reviews the chemical and genetics of critically lysosomal hydrolase deficiencies that can cause the storage of sphingolipids This book then explains the role of myelin basic protein in lipids in vivo that the weak bonding of the protein is not a major component of myelin stability Another paper discusses the procedures for isolating subfractions of myelin and myelin related membranes with some attention given on the alterations in the subfractionation of myelin in pathological hypomyelinating and demyelinating conditions Another article discusses the biochemical and enzymatic composition of lysosomes and the biosynthesis intracellular transport storage and the degradation of lysosomal constituents This collection of papers will benefit scientists doing research in microbiology microchemistry molecular genetics and neurochemistry

Medical and Social Aspects of Alcohol Abuse Boris Tabakoff,2012-12-06 Alcohol use affects either directly or

indirectly nearly all facets of Western civilization Eastern cultures are also not exempt from the influence of alcohol and the present decade has been a time of increased alcohol use in all parts of the world The problems of alcohol abuse and alcoholism are of concern to a variety of professionals in the biomedical and psychosocial health sciences and although the alcohol research literature contains much information on the relationships between alcohol ingestion and physiological neurochemical pharmacologic genetic environmental and psychological effects in humans and in subhuman species there is at the present time no advanced textbook that integrates the available information for use by both students and professionals The writing of Medical and Social Aspects of Alcohol Abuse constitutes an attempt to create a scholarly reference and resource for students researchers practicing clinicians and paraprofessionals who wish to understand the complex interplay of factors related to acute and chronic alcohol intoxication the effects of alcohol on body functions and treatment approaches to alcohol abusers and alcoholics

Neurogenesis in the Adult Brain I Tatsunori Seki, Kazunobu Sawamoto, Jack M. Parent, Arturo Alvarez-Buylla, 2011-06-15 The discovery of adult neurogenesis caused a paradigm shift in the neurosciences For more than 100 years it was believed that adult neurons do not regenerate Joseph Altman and Fernando Nottebohm found proof to the contrary and changed the course of history Their research included here provides the foundations of the field Today adult neurogenesis is a rapidly expanding discipline applicable to the study of brain development and diseases learning and memory aging and neuropsychiatric disorders With multiple authors the 27 chapters of this book contain the latest work in two volumes The first presents the basic biology of adult neurogenesis in non-mammalian vertebrates and in the mammalian hippocampus and olfactory bulb and the second discusses clinical implications and delves into adult neurogenesis and brain injury as well as neurodegenerative and neuropsychiatric pathologies With details of the anatomy physiology and molecular biology of the two neurogenic brain regions this book provides indispensable knowledge for many areas of neuroscience and for experimental and clinical applications of adult neurogenesis to brain therapy

Transport Phenomena in the Nervous System Giulio Levi, 2013-03-08 This book presents the papers that were delivered at the Satellite Symposium of the International Society for Neurochemistry in Padua September 1975 Having such Satellite Symposia was a new experiment for the Society and all signs including those from Padua indicate that it was a very successful experiment which will be an old tradition for the Society The large international meeting affords the opportunity for presentations from all areas for meeting of colleagues from various backgrounds and disciplines The Satellite Symposia allow people from the same area of interest to discuss their subject in depth and as such represent meetings of possibly the greatest practical significance for the participants The Padua Symposium was no exception all who participated in it could testify to its success in exchanging of information learning of new approaches and acquiring of new ideas also the strengthening of old friendships forming of new friendships and new collaborations and exposing ideas to criticisms suggestions discussions As a sign of the interest and success of the participants I can mention that all participants have sent

Selective Neurotoxicity Hans Herken,Ferdinand Hucho,2012-12-06 Following the overwhelmingly successful response to the first printing in hardcover the hottest topics in Selective Neurotoxicity are now available in this special softcover edition Researchers are provided with well grounded information on the cellular and subcellular targets of neurotoxins and their mode of action at the level of ion channels receptors and neurotransmitters The use of bacterial toxins as a tool in neuroscientific research is an important aspect in this context The chapters that interest clinicians as well deal with protective barriers in the peripheral and central nervous system and metabolic disorders that cause neurotoxins to be built up in the human body The induction of tumors by neurotropic carcinogens is included
