BMBF made a careful analysis of all national and international research projects conducted in the field of speech and language technology before deciding to launch an eight year basic research lead project in which research groups were to cooperate in an interdisciplinary and international effort covering the disciplines of computer science computational linguistics translation science signal processing communication science and artificial intelligence At some point the project comprised up to 135 work packages with up to 33 research groups working on these packages The project was controlled by means of a network plan Every two years the project situation was assessed and the project goals were updated An international scientific advisory board provided advice for BMBF A new scientific approach was chosen for this project coping with the complexity of spontaneous speech with all its pertinent phenomena such as ambiguities self corrections hesitations and disfluencies took precedence over the intended lexicon size Another important aspect was that prosodic information was exploited at all processing stages

LMF Lexical Markup Framework Gil Francopoulo, 2013-05-06 The community responsible for developing lexicons for Natural Language Processing NLP and Machine Readable Dictionaries MRDs started their ISO standardization activities in 2003 These activities resulted in the ISO standard Lexical Markup Framework LMF After selecting and defining a common terminology the LMF team had to identify the common notions shared by all lexicons in order to specify a common skeleton called the core model and understand the various requirements coming from different groups of users The goals of LMF are to provide a common model for the creation and use of lexical resources to manage the exchange of data between and among these resources and to enable the merging of a large number of individual electronic resources to form extensive global electronic resources The various types of individual instantiations of LMF can include monolingual bilingual or multilingual lexical resources The same specifications can be used for small and large lexicons both simple and complex as well as for both written and spoken lexical representations The descriptions range from morphology syntax and computational semantics to computer assisted translation The languages covered are not restricted to European languages but apply to all natural languages The LMF specification is now a success and numerous lexicon managers currently use LMF in different languages and contexts This book starts with the historical context of LMF before providing an overview of the LMF model and the Data Category Registry which provides a flexible means for applying constants like grammatical gender in a variety of different settings It then presents concrete applications and experiments on real data which are important for developers who want to learn about the use of LMF

Designing Human Interface in Speech Technology Fang Chen, 2006 Bridging the gap between the needs of the technical engineer and cognitive researchers related to speech technology applications Systematic approach focusing on the utility of speech related product design Designed to respond to the growing need for specific theories tools and methods for design testing and evaluating speech related human system interfaces Targeted at designers

engineers and decision makers working in the area of speech technology research *Speech Technology* Fang Chen, Kristiina Jokinen, 2010-07-01 This book gives an overview of the research and application of speech technologies in different areas One of the special characteristics of the book is that the authors take a broad view of the multiple research areas and take the multidisciplinary approach to the topics One of the goals in this book is to emphasize the application User experience human factors and usability issues are the focus in this book **Computational Linguistics and Intelligent Text Processing** Alexander Gelbukh, 2003-07-31 This book constitutes the refereed proceedings of the Third International Conference on Intelligent Text Processing and Computational Linguistics CICLing 2002 held in Mexico City Mexico in February 2002 The 44 revised papers presented together with four invited papers were carefully reviewed and selected from a total of 67 submissions The papers are organized in topical sections on semantics word sense disambiguation anaphora syntax and parsing part of speech tagging lexicon and corpus text generation morphology speech spelling information extraction and information retrieval summarization text mining and text classification and categorization document processing and demo descriptions *Corpus Linguistics. Volume 1* Anke Lüdeling, Merja Kytö, 2008-12-10 This volume provides an up to date survey of the field of corpus linguistics a field whose methodology has revolutionized much of the empirical work done in most fields of linguistic study over the past decade Corpus linguistics investigates human language by starting out from large collections of texts spoken written or recorded These language corpora which are now regularly available in electronic form are the basis for quantitative and qualitative research on almost any question of linguistic interest Many techniques that are in use in corpus linguistics today are rooted in the tradition of the late 18th and 19th century when linguistics began to make use of mathematical and empirical methods Modern corpus linguistics has used and developed these methods in close connection with computer science and computational linguistics The handbook sketches the history of corpus linguistics shows its potential discusses its problems and describes various methods of collecting annotating and searching corpora as well as processing corpus data It also reports case studies that illustrate the wide range of linguistic research questions addressed in corpus linguistics The over 60 articles included in the handbook are divided into five sections 1 the origins and history of corpus linguistics and surveys of its relationship to central fields of linguistics 2 corpus compilation 3 corpus types 4 preprocessing of corpora 5 the use and exploitation of corpora The final section gives an overview of the results of corpus studies obtained in phonetics phonology morphology syntax semantics sociolinguistics historical linguistics stylometry dialectology and discourse analysis It also reports on recent advances made in human and machine translation contrastive studies computer assisted language learning and automatic summarization The contributors to the volume are internationally known experts in their respective fields The handbook is intended for a wide audience ranging from teachers university students and scholars to anyone interested in the use of computers in linguistic analyses and applications **Voice and Speech Quality Perception** Ute Jekosch, 2005-08-02 Foundations of Voice and Speech

Quality Perception starts out with the fundamental question of How do listeners perceive voice and speech quality and how can these processes be modeled Any quantitative answers require measurements This is natural for physical quantities but harder to imagine for perceptual measurands This book approaches the problem by actually identifying major perceptual dimensions of voice and speech quality perception defining units wherever possible and offering paradigms to position these dimensions into a structural skeleton of perceptual speech and voice quality The emphasis is placed on voice and speech quality assessment of systems in artificial scenarios Many scientific fields are involved This book bridges the gap between two quite diverse fields engineering and humanities and establishes the new research area of Voice and Speech Quality Perception
