Melodrama and Modernity Ben Singer,2001-04-05 In this groundbreaking investigation into the nature and meanings of melodrama in American culture between 1880 and 1920 Ben Singer offers a challenging new reevaluation of early American cinema and the era that spawned it Singer looks back to the sensational or blood and thunder melodramas e g The Perils of Pauline The Hazards of Helen etc and uncovers a fundamentally modern cultural expression one reflecting spectacular transformations in the sensory environment of the metropolis in the experience of capitalism in the popular imagination of gender and in the exploitation of the thrill in popular amusement Written with verve and panache and illustrated with 100 striking photos and drawings Singer s study provides an invaluable historical and conceptual map both of melodrama as a genre on stage and screen and of modernity as a pivotal idea in social theory

Emotion and Stress F. Fay Evans-Martin,2009 Emotion is a universal language understood by all cultures It is an integral part of our spoken and written language our art and our music Various emotions enable us to respond quickly and appropriately to our environment And stress in turn is created when environmental factors pose a potential threat to our safety Our fast paced world requires that we cope with stress in a

manner that will harness its energy and minimize its potential to produce disease or distress This book explains how negative emotions are often generated by stressful situations and explores how both emotions and stress can have an impact on our health and well being *Psychological Aspects of Cancer* Brian I. Carr, JENNIFER STEEL, 2012-12-02 *Psychological Aspects of Cancer A Guide to Emotional and Psychological Consequences of Cancer Their Causes and Their Management* opens with two essays on the biological basis of emotion mental driven body processes and disease The consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals psychological counseling should be seen not only as a way to help patients cope but possibly to influence the disease itself A unique overview of a key area of cancer care this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre emptive therapies and decision making in cancer therapy A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping The fourth section is an acknowledgement that patients with cancer live in a social context which often includes a partner and or caregiver The fifth section includes several essays on aspects and modalities of care giving that are designed to help patients coping with their cancer and its aftermath which increasingly extends for years An important title covering key aspects of one of the most troubling disorders of our time *Psychological Aspects of Cancer A Guide to Emotional and Psychological Consequences of Cancer Their Causes and Their Management* will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer

Sports Endocrinology Michelle P. Warren, Naama W. Constantini, 2000-05-01 Since the observation in the 19th century that an extract of the suprarenal bodies injected into the circulation caused a rise in blood pressure the endocrine system has become a major component in our understanding of human physiology The introduction of radioimmunoassay techniques and the ability to measure minimal amounts of hormones a term derived from the Greek to excite have shown that acute exercise causes a release of a large number of hormones and that chronic exercise may further lead to long term alterations in endocrine homeostasis Actually almost every organ and system in the body is affected by physical activity and exercise much of it through the endocrine and neuroendocrine system Investigation of the effect of acute or chronic physical activity on the endocrine system is a complex matter since the stimulus called exercise has many components such as mode intensity duration and others In addition several other factors such as age gender training status body temperature circadian rhythm metabolic state menstrual cycle and various external conditions as well as psychological factors can modify the effect of physical activity on hormonal secretion Moreover the physiological stimulus of exercise often provokes several and parallel cascades of biochemical and endocrine changes It is therefore often extremely difficult to distinguish between primary and secondary events and between cause and effect These limitations will be discussed in Chapter 1
