Prostaglandins, Leukotrienes and Other Eicosanoids Friedrich Marks, Gerhard Fürstenberger,2008-11-21 Polyunsaturated fatty acids are essential for human cell metabolism As precursors of a very large and extremely versatile family of signaling compounds they play a key role in intracellular communication Eicosanoids constitute one of the most abundant and prominent subfamilies of these fatty acid derivatives which are formed primarily along oxidative pathways Prostaglandins leukotrienes and related eicosanoids have a modulatory function in mammalian cells and are responsible for tissue responses such as inflammation or wound repair Increasing activity in eicosanoid research sheds new light on today s most common diseases including atherosclerosis cancer Alzheimer s allergies and rheumatic diseases The recent advances already have far reaching implications in medicine This detailed account written by leading experts covers the ground breaking developments in recent eicosanoid research The topics span eicosanoid biogenesis new aspects of their pathophysiology for example their influence on the cardiovascular system as well as the clinical application of synthetic eicosanoids and their antagonists Researchers and students working in biochemistry or in pharmaceutical physiological medicinal and neurochemistry will value this informative introduction to one of the most rapidly developing fields in cell biology

Handbook of Eicosanoids Vol 1B A. L. Willis, 1987-09-30 Profiles of the Nutrients 2. Minerals and Trace Elements Richard Rydon, 2017-02-07 Part 2 of Profiles of the Nutrients by Richard Rydon covers the Minerals and Trace Elements required by the human body The topics considered include the six major Minerals and eighteen Trace Elements In all the series comprises three books The first part deals with Carbohydrates Lipids and Proteins And the third part deals with Water Soluble and Fat Soluble Vitamins

Carcinogenesis and Dietary Fat S. Abraham, 2012-12-06 Prostaglandins Leukotrienes and Cancer is a multi volume series which focuses on an emerging area of cancer research In 1968 R H Williams first reported that elevated prostaglandin levels are present in human medullary carcinoma Since that time the concept that arachidonic acid metabolites may be involved in cancer has expanded to include every aspect of the disease from cell transformation through metastasis Prostaglandins and leukotrienes are generic terms used to describe a family of bioactive lipids produced from unsaturated fatty acids principally from arachidonic acid via the cyclooxygenase and lipoxygenase pathways respectively Cyclooxygenase products consist of diverse products such as prostaglandin E2 PGE2 prostacyclin PGI2 and thromboxane A2 TXA2 whereas lipoxygenase products consist of hydroperoxy fatty acids and mono di and tri hydroxy acids including leukotrienes lipoxins and epoxides The precursor fatty acids for the cyclooxygenase and lipoxygenase pathways are present in cellular phospholipids This finding established an important control point in their biosynthesis the release of substrate This occurs in response to numerous stimuli that act at the cell

surface Dr Bengt Samuelsson's extensive study of the metabolism of prostaglandins indicate that they are rapidly inactivated on a single pass through pulmonary circulation. Thus they cannot act as circulating hormones and appear to be made on demand in the vicinity of target tissues leading to the concept that prostaglandins are local hormones or autoids. Altered production qualitative and/or quantitative of prostaglandins and leukotrienes has been implicated in the development of a number of disease states e.g. Revival: CRC Handbook of Eicosanoids, Volume II (1989) A. Much emphasis is given to recent breakthroughs in the mechanism of action of anti-inflammatory corticosteroids and the development of receptor antagonists for prostaglandins and leukotrienes. There is also an introductory chapter that proposes areas that require further investigation and novel approaches using existing technology. This handbook will thus be invaluable for medicinal chemists pharmacologists and all those involved in basic research in the eicosanoid area. revolutionary new understanding of our current obesity epidemic by showing that it can be viewed as a form of cancer to be treated using the clinically proven pathway to change the expression of your genes using food as a drug to rid your body of toxic fat For many of us one of the first signs of toxic fat is the accumulation of excess body fat In fact obesity can be viewed as a form of cancer that is driven by toxic fat However only when this toxic fat begins to spread into the bloodstream does it begin to attack your other organs leading to early development of chronic disease This is why some people can be overweight and be quite healthy while others can be of normal weight and be quite sick What ultimately determines your state of wellness is not your weight but the levels of toxic fat in your blood This book changes forever how we look at the fat on our body and its impact on the future of health care in America
