Götze, 2018-11-20 This book is a printed edition of the Special Issue Mineralogy of Quartz and Silica Minerals that was published in Minerals Advanced Plasma Spray Applications Hamidreza Salimi Jazi, 2012-03-21 Recently plasma spray has been received a large number of attentions for various type of applications due to the nature of the plasma plume and deposition structure The plasma gas generated by the arc consists of free electrons ionized atoms some neutral atoms and undissociated diatomic molecules The temperature of the core of the plasma jet may exceed up to 30 000 K Gas velocity in the plasma spray torch can be varied from subsonic to supersonic using converging diverging nozzles Heat transfer in the

plasma jet is primarily the result of the recombination of the ions and re association of atoms in diatomic gases on the powder surfaces and absorption of radiation Taking advantages of the plasma plume atmosphere plasma spray can be used for surface modification and treatment especially for activation of polymer surfaces In addition plasma spray can be used to deposit nanostructures as well as advanced coating structures for new applications in wear and corrosion resistance Some state of the art studies of advanced applications of plasma spraying such as nanostructure coatings surface modifications biomaterial deposition and anti wear and corrosion coatings are presented in this book High Dielectric Constant Materials Howard Huff, 2005 Issues relating to the high K gate dielectric are among the greatest challenges for the evolving International Technology Roadmap for Semiconductors ITRS More than just an historical overview this book will assess previous and present approaches related to scaling the gate dielectric and their impact along with the creative directions and forthcoming challenges that will define the future of gate dielectric scaling technology Topics include an extensive review of Moore's Law the classical regime for SiO₂ gate dielectrics the transition to silicon oxynitride gate dielectrics the transition to high K gate dielectrics including the drive towards equivalent oxide thickness in the single digit nanometer regime and future directions and issues for ultimate technology generation scaling The vision wisdom and experience of the team of authors will make this book a timely relevant and interesting resource focusing on fundamentals of the 45 nm Technology Generation and beyond

Advanced Sensor and Detection Materials Ashutosh Tiwari, Mustafa M. Demir, 2014-06-09 Presents a comprehensive and interdisciplinary review of the major cutting edge technology research areas especially those on new materials and methods as well as advanced structures and properties for various sensor and detection devices The development of sensors and detectors at macroscopic or nanometric scale is the driving force stimulating research in sensing materials and technology for accurate detection in solid liquid or gas phases contact or non contact configurations or multiple sensing The emphasis on reduced scale detection techniques requires the use of new materials and methods These techniques offer appealing perspectives given by spin crossover organic inorganic and composite materials that could be unique for sensor fabrication The influence of the length composition and conformation structure of materials on their properties and the possibility of adjusting sensing properties by doping or adding the side groups are indicative of the starting point of multifarious sensing The role of intermolecular interactions polymer and ordered phase formation as well as behavior under pressure and magnetic and electric fields are also important facts for processing ultra sensing materials The 15 chapters written by senior researchers in Advanced Sensor and Detection Materials cover all these subjects and key features under three foci 1 principals and perspectives 2 new materials and methods and 3 advanced structures and properties for various sensor devices
