Current Ornithology Richard Johnston, 2013-11-11 The appearance of the first volume of a projected series is the occasion for comment on scope aims and genesis of the work The scope of Current Ornithology is all of the biology of birds Ornithology as a whole organism science is concerned with birds at every level of biological organization from the molecular to the community at least from the Jurassic to the present time and over every scholarly discipline in which bird biology is done to say this is merely to expand a dictionary definition of ornithology The aim of the work to be realized over several volumes is to present reviews or position statements concerning the active fields of ornithological research The reviews will be relatively short and often will be done from the viewpoint of a readily identified group or school Such a work could have come into being at any time within the past fifty years but that Current Ornithology appears now is a result of events that are only seven to eight years old One important event was the initiation in 1975 1976 of the Workshop on a National Plan for Ornithology under the directorship of James R King and Walter J Bock cosponsored by the American Ornithologists Union and the National Science Foundation Part of the Workshop s interests lay in publications resources and certain kinds of information on publications were obtained by means of a questionnaire *The Atlas of Breeding Birds in New York State* Robert F. Andrle, Janet R. Carroll, 1988 This generously illustrated easy to use reference gives instant information on 238

birds that are native to New York State The core of the atlas is a series of accounts of each species each account including a distribution map with possible probable or confirmed breeding Facing each map is an explanatory page of text that covers a number of topics abundance historical and current distribution habitat and nest description and location On the same page is an illustration of the bird often with its nest and young *Status and Trends Report on Wildlife of the San Francisco Estuary*, 1992

The North American Swans: Their Biology and Conservation Paul Johnsgard, 2020-03-23 Among birds swans are relatively long lived species and are also among the most strongly monogamous having prolonged pair and family bonds that strongly influence their reproductive and general social behavior which in combination with their beauty and elegance contribute to the overall high degree of worldwide human interest in them This volume of more than 59 000 words describes the distributions ecology social behavior and breeding biologies of the four species of swans that breed or have historically bred in North America including the native trumpeter and tundra swans the introduced mute swan and the marginally occurring whooper swan Also included are 5 distribution maps 15 drawings 27 photographs by the author and a reference section of nearly 1 000 literature citations

The Teal Matthieu Guillemain, Johan Elmberg, 2014-10-23 Small noisy and colourful the Teal is a familiar duck throughout the wetlands and waterways Europe and Asia Once hunted extensively for the pot its numbers have recovered and it is now one of our commonest species of waterfowl A flagship species for wetland conservation the Teal is also an excellent model species for ecological research and this forms the spine of this new Poyser monograph The Teal looks at distribution and trends in numbers foraging ecology breeding behaviour population dynamics management and conservation of teal looking at both the Eurasian Common Teal and its North American equivalent the Green winged Teal which until relatively recently was considered to be the same species The book provides a scientifically robust account on which wetland managers research scientists and the ornithological community may rely with wider implications for the conservation and management of other waterfowl and for ecological research in general Scientific and Technical Books and Serials in Print, 1989

Guide to Sources for Agricultural and Biological Research J. Richard Blanchard, Lois Farrell, 2023-07-28

The Wildlife Techniques Manual Nova J. Silvy, 2012-03 A standard text in a variety of courses the Techniques Manual as it is commonly called covers every aspect of modern wildlife management and provides practical information for applying the hundreds of methods described in its pages To effectively incorporate the explosion of new information in the wildlife profession this latest edition is logically organized into a two volume set Volume 1 is devoted to research techniques and Volume 2 focuses on management methodologies

The North American Geese Paul Johnsgard, 2016-08-23 The eight currently recognized species of North American geese are part of a familiar group of birds collectively called waterfowl all of which are smaller than swans and generally larger than ducks They include the most popular of our aquatic gamebirds with several million shot each year by sport hunters Our two most abundant waterfowl the Canada goose and snow goose have populations collectively totaling about 15 million individuals Like swans the lifelong

pairbonding of geese their familial care and prolonged social attachment to their offspring are legendary Their seasonal migratory flights sometimes span thousands of miles and the sight of their long wavering flight formations are as much the symbols of seasonal change as are the spring songs of cardinals or the appearance of autumnal leaf colors This book describes each species geographic range and subspecies its identification traits weights and measurements and criteria for its age and sex determination Ecological and behavioral information includes each species breeding and wintering habitats its foods and foraging behavior its local and long distance movements and its relationships with other species Reproductive information includes each species age of maturity pair bond pattern pair forming behaviors usual clutch sizes and incubation periods brooding behavior and postbreeding behavior Mortality sources and rates of egg young and adult losses are also summarized and each species past and current North American populations are estimated In addition to a text of nearly 60 000 words the book includes 8 maps 21 line drawings and 28 photographs by the author as well as more than 700 literature citations

Breeding Bird Atlas of Santa Clara County, California William G. Bousman, 2007 Reports the results of fieldwork in Santa Clara County from 1987 to 1993 undertaken to determine the current status of all species of birds known to be breeding in the county These data have been augmented with additional field observations reported from 1994 to 2005

Introduction With Wings Extended Greg Hoch, 2020-05-01 A century ago many people had given up on the wood duck dooming it to extinction along with the passenger pigeon and Carolina parakeet Today it s one of the most familiar and most harvested ducks in the eastern half of the country and one of America s great conservation success stories In With Wings Extended Minnesota conservationist Greg Hoch introduces readers to a duck they probably recognize but may not know well This book shows how almost anyone can get involved in conservation and do something for wildlife beyond writing checks to conservation organizations Hoch illustrates the complexities of wildlife and habitat management that landowners as well as state and federal wildlife agencies deal with on a daily basis and takes readers through the life stages of what is largely considered the most beautiful duck in the world In this fascinating and practical read Hoch blends the historical literature about the species with modern science and also shows how our views of conservation have changed over the last century

The North American Perching and Dabbling Ducks Paul Johnsgard, 2017-03 This volume the fourth in a series of books that collectively update and expand P A Johnsgard s 1975 The Waterfowl of North America summarizes research findings on this economically and ecologically important group of waterfowl The volume includes the mostly tropical perching duck tribe Cairinini of which two species the muscovy duck and the wood duck are representatives Both species are adapted for foraging on the water surface mostly on plant materials but typically perch in trees and nest in elevated tree cavities or other elevated recesses This volume also includes the dabbling or surface feeding duck tribe Anatini a large assemblage of duck species that mainly forage on the water surface but nest on the ground or only very rarely in elevated locations Of this tribe 12 species that regularly breed in North America are included among them such familiar species as mallards wigeons

pintails and teal Descriptive accounts of the distributions populations ecologies social sexual behaviors and breeding biology of all these species are provided together with distribution maps Five additional Eurasian and West Indian species have been reported several times in North America these have been included with more abbreviated accounts but all 17 species are illustrated by drawings photographs or both The text includes about 84 000 words and contains more than 1 000 references There are also 12 distribution maps 21 drawings 28 photographic plates and 58 anatomical or behavioral sketches

Eadie,2015-04-13 The past decade has seen a huge increase in the interest and attention directed toward sea ducks the Mergini tribe This has been inspired in large part by the conservation concerns associated with numerical declines in several sea duck species and populations as well as a growing appreciation for their interesting ecological attributes Reflec
