a comprehensive practice handbook to help build the skills necessary to complete a clinical placement in the field of adult mental health. While practical in orientation, the book is based solidly on empirical evidence. Building on the success of the previous edition, this handbook has been extensively revised in a number of ways. Throughout the book, the text, references, and website addresses have been updated to reflect important developments since the publication of the first edition. Recent research findings on the epidemiology, aetiology, course, outcome, assessment, and treatment of all psychological problems considered in this volume have been incorporated into the text. Account has been taken of changes in the diagnosis and classification of psychological problems reflected in the DSM 5. Chapters on ADHD in adults, emotion focused therapy, radically open dialectical behaviour therapy, and schema therapy have been added. The book is divided into 6 sections. Section 1 covers conceptual frameworks for practice, lifespan development, classification, and epidemiology; CBT, psychodynamic, emotion focused, systemic, and bio-medical models, and general assessment procedures. Section 2 deals with mood problems: depression, bipolar disorder, suicide risk, and anger management. Section 3 focuses on anxiety problems: social phobia, generalized anxiety disorder, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, and depersonalization disorder. Section 4 deals with psychological problems linked to physical health: health anxiety, somatization, chronic pain, adjustment to cancer, and eating disorders. Section 5 focuses on other significant psychological problems that come to the attention of clinical psychologists in adult mental health services: ADHD in adults, alcohol and other drug problems, psychosis, and psychological problems in older adults. Section 6 contains chapters on therapeutic approaches to psychological distress related to complex childhood trauma, dialectical behaviour therapy for borderline personality disorder, radically open dialectical behaviour therapy for over-controlled presentations, and schema therapy. Each of the chapters on clinical problems explains how to assess and treat the condition in an evidence-based way, with reference to case material. Interventions from cognitive behavioural, psychodynamic, interpersonal, systemic, and biomedical approaches are described where there is evidence that they are effective for the problem in question. Skill building exercises and further reading for psychologists and patients are included at the end of each chapter. This book is one of a set of three volumes which cover the lion's share of the curriculum for clinical psychologists in training in the UK and Ireland. The other two volumes are the Handbook of Child and Adolescent Clinical Psychology, Third Edition, by Alan Carr, and the Handbook of Intellectual Disability and Clinical Psychology Practice, Second Edition, edited by Alan Carr, Christine Linehan, Gary O'Reilly, Patricia Noonan Walsh, and John McEvoy.

Brain-Disabling Treatments in Psychiatry Peter R. Breggin, 2007-12-17. From the author of Toxic Psychiatry and Talking Back to Prozac. Peter Breggin is the conscience of American psychiatry. Once more he updates us on the real evidence with respect to the safety and effectiveness of specific psychiatric medications and ECT. This information is needed by all mental health professionals as well as patients and families. Bertram Karon, Ph.D., Professor of Psychology, Michigan State University. Author of The Psychotherapy of Schizophrenia. Nowhere does false medical thinking do more harm than in the

modern psychiatric argument that mental illness is easily diagnosed and then cured by a side effect free drug Nowhere is the correct psychiatric thinking more evident than in the books by Peter Breggin William Glasser MD psychiatrist author of Reality Therapy In Brain Disabling Treatments in Psychiatry renowned psychiatrist Peter R Breggin M D presents startling scientific research on the dangerous behavioral abnormalities and brain dysfunctions produced by the most widely used and newest psychiatric drugs such as Prozac Paxil Zoloft Cymbalta Effexor Xanax Ativan Ritalin Adderall Concerta Strattera Risperdal Zyprexa Geodon Abilify lithium and Depakote Many of Breggin s earlier findings have improved clinical practice led to legal victories against drug companies and resulted in FDA mandated changes in what the manufacturers must admit about their drugs Yet reliance on these drugs has continued to escalate in the last decade and drug company interests have overwhelmed psychiatric practice This greatly expanded second edition supported by the latest evidence based research shows that psychiatric drugs achieve their primary or essential effect by causing brain dysfunction and that they tend to do far more harm than good New scientific analyses in this completely updated edition include Chapters covering every new antidepressant and stimulant drug Twenty new guidelines for how to conduct non drug therapy A chapter describing how to safely withdraw from psychiatric drugs A discussion of medication spellbinding explaining how patients fail to appreciate their drug induced mental dysfunctions Documentation of how the drug companies control research and the flow of information about psychiatric treatments
