Merriam, 2013-11-21 This volume Use

of Microcomputers in Geology is the sixth in the series Computer Applications in the Earth Sciences published by Plenum Press in New York. The series was started in 1969 to publish proceedings of important meetings on geomathematics and computer applications. The first two volumes recorded proceedings of the Colloquia 1969-1970 sponsored by the Kansas Geological Survey at The University of Kansas in Lawrence. The third volume was proceedings of the 8th International Sedimentological Congress 1971 held in Heidelberg, West Germany; the fourth was proceedings of the 8th Geochronology Congress 1979 at Syracuse University in Syracuse, New York; and the fifth was selected papers from the 27th International Geological Congress 1989 held in Washington, D.C. All meetings were cosponsored by the International Association for Mathematical Geology. These special publications are important in the development of quantitative geology. Papers by a wide range of authors on a wide range of topics gives the reader a flavor for recent advances in the subject. In this volume, those advances in the use of microcomputers. Databases for Cardiology G.T. Meester, F. Pinciroli, 2012-12-06. A database is in principle just a large collection of related or separate data systematically stored in a computer. It should be possible for the data to be easily entered into the database structure and afterwards also easily read, corrected, and processed. The later analysis of data from such a database is greatly enhanced by the availability of special query languages and statistical analysis programs, not only for serial items but also for large combinations of data. Query languages such as SQL (Structured Query Language) developed especially for these purposes make databases easily accessible also to researchers who may not be very well versed in computer programming. The cardiologist, medical clinician, and researcher of today is of necessity confronted more and more with computer-based data storage. Interest is of course focused primarily on the clinical use of such databases more than on the technical design itself, except for some very specific personalized applications. For the latter approach, there are at present many software packages commercially available, especially designed for use in the personal computer environment. This book is comprised out of a number of contributions by various authors with differing backgrounds and from many different countries. The editors, being a cardiologist and an information scientist, have strived to achieve an equilibrium between these two fields. The chapters in this book form a cross section of the many approaches to database design and implementation in the area of cardiology.
