Akyildiz, 2007-04-27 This book constitutes the refereed proceedings of the 6th International IFIP TC6 Networking Conference NETWORKING 2007 held in Atlanta GA USA in May 2007 The 99 revised full papers and 30 poster papers were carefully reviewed and selected from 440 submissions The papers are organized in topical sections on ad hoc and sensor networks connectivity and coverage scheduling and resource allocation mobility and location awareness routing and key management wireless networks mesh networks mobility TCP MAC performance as well as scheduling and resource allocation next generation into      *Activism on the Web* Veronica Barassi, 2015-05-22 Activism on the Web examines the everyday tensions

that political activists face as they come to terms with the increasingly commercialized nature of web technologies and sheds light on an important yet under investigated dimension of the relationship between contemporary forms of social protest and internet technologies Drawing on anthropological and ethnographic research amongst three very different political groups in the UK Italy and Spain the book argues that activists everyday internet uses are largely defined by processes of negotiation with digital capitalism These processes of negotiation are giving rise to a series of collective experiences which are defined by the tension between activists democratic needs on one side and the cultural processes reinforced by digital capitalism on the other In looking at the encounter between activist cultures and digital capitalism the book focuses in particular on the tension created by self centered communication processes and networked individualism by corporate surveillance and data mining and by fast capitalism and the temporality of immediacy Activism on the Web suggests that if we want to understand how new technologies are affecting political participation and democratic processes we should not focus on disruption and novelty but we should instead explore the complex dialectics between digital discourses and digital practices between the technical and the social between the political economy of the web and its lived critique      **Enabling Optical Internet with**

**Advanced Network Technologies** Javier Aracil, Franco Callegati, 2009-06-20 This book provides a broad overview of IP over WDM technologies as seen by a group of experts participating in the e Photon ONeC and BONE Networks of Excellence funded within the VIth and VIIth Research Framework Programmes FP6 and FP7 of the European Union Both Networks of

Excellence are aimed at the integration of research teams active on optical networks at a pan European level with the creation of virtual centers of excellence in optical networks technologies and services The working groups on optical core networks gathered about a 100 researchers from more than 20 universities and research institutions in Europe The multifaceted viewpoints available in this community on the current state and future evolution of large WDM networking infrastructures are reported in this book The book is organized in chapters with chapter editors listed on pp having the responsibility to collect and harmonize contributions by different search groups The whole work was made possible by the coordination efforts of Javier Aracil and Franco Callegati leaders at the time when the book writing was begun of the working groups on optical core networks and on optical burst switching in e Photon ONeC We are thankful to them for their efforts We hope that this manuscript will serve as a valuable reference for students and practitioners in the field of optical networking

**Practical Internet of Things Networking** Rolando Herrero,2023-06-03 This textbook explores the different protocols and technologies that are key to supporting the most important Internet of Things IoT networking scenarios Intended for upper undergraduate classes the author presents these protocols and technologies from a perspective of the standard layered architecture with special focus on protocol interaction and functionality To this end the book provides a unique step by step hands on approach that enables the reader to use common software tools and network emulators to understand prototype and deploy a vast range of use cases The author shows how these topologies which rely on standard physical layer technologies like LoRa NB IoT LTE M IEEE 802 15 4 and BLE provide end to end IPv6 connectivity and comply with the most important requirements of industrial IoT solutions The book helps readers learn how to build IoT networks through exercises lab projects and examples

*Game Theory, the Internet of Things and 5G Networks* Josephina Antoniou,2019-05-13 This book shows how to model selected communication scenarios using game theory The book helps researchers specifically dealing with scenarios motivated by the increasing use of the Internet of Things IoT and 5G Communications by using game theory to approach the study of such challenging scenarios The author explains how game theory acts as a mathematical tool that models decision making in terms of strategies and mechanisms that can result in optimal payoffs for a number of interacting entities offering often antagonistic behaviors The book explores new technologies in terms of design development and management from a theoretical perspective using game theory to analyze strategic situations and demonstrate profitable behaviors of the cooperative entities The book identifies and explores several significant applications uses situations that arise from the vast deployment of the IoT The presentation of the technological scenarios is followed in each of the first four chapters by a step by step theoretical model often followed by equilibrium proof and numerical simulation results that are explained in a tutorial like manner The four chapters tackle challenging IoT and 5G related issues including new security threats that IoT brings e g botnets ad hoc vehicular networks and the need for trust in vehicular communications content repetition by offloading traffic onto mobile users as well as issues due to new wearable devices that enable data collection to
