CSL '87 Egon Börger, Hans Kleine Büning, Michael M. Richter, 1988-09-14 This volume contains the papers which were presented to the workshop Computer Science Logic held in Karlsruhe on October 12-16 1987 Traditionally Logic or more specifically Mathematical Logic splits into several subareas Set Theory Proof Theory Recursion Theory and Model Theory In addition there is what sometimes is called Philosophical Logic which deals with topics like nonclassical logics and which for historical reasons has been developed mainly at philosophical departments rather than at mathematics institutions Today Computer Science challenges Logic in a new way The theoretical analysis of problems in Computer Science for intrinsic reasons has pointed back to Logic A broad class of questions became visible which is of a basically logical nature These questions are often related to some of the traditional disciplines of Logic but normally without being covered adequately by any of them The novel and unifying aspect of this new branch of Logic is the algorithmic point of view which is based on experiences people had with computers The aim of the Computer Science Logic workshop and of this volume is to represent the richness of research activities in this field in the German speaking countries and to point to their underlying general logical principles

*Scientific Approaches to the Philosophy of Religion* Y. The Kalam Cosmological Argument, Volume 2 Paul Copan, William Lane Craig, 2017-11-16 The ancient kalam cosmological argument maintains that the series of past events is finite and that therefore the universe began to exist Two recent scientific discoveries have yielded plausible prima facie physical evidence for the beginning of the universe The expansion of the universe points to its beginning to a Big Bang as one retraces the universe's expansion in time And the second law of thermodynamics which implies that the universe's energy is progressively degrading suggests that the universe began with an initial low entropy condition The kalam cosmological argument perhaps the most discussed philosophical argument for God's existence in recent decades maintains that whatever begins to exist must have a cause And since the universe began to exist there must be a transcendent cause of its beginning a conclusion which is confirmatory of theism So this medieval argument for the finitude of the past has received fresh wind in its sails from recent scientific discoveries This collection reviews and assesses the merits of the latest scientific evidences for the universe's beginning It ends with the kalam argument's conclusion that the universe has a cause a personal cause with properties of theological significance

**Meaning: the Dynamic Turn** Jaroslav Peregrin, 2021-07-26 In recent decades many theories of formal semantics of natural language have undergone what can be called a dynamic turn they have moved from treating language as a static system to considering it in action and to taking meanings as crucially involving context change potentials The theories however usually concentrate much more on the hows of the turn than on its whys and as a

result the conceptual foundations of dynamic semantics are much less elaborated than its technical side This book based on a conference held in Prague in September 2001 is a contribution to filling this gap it consists of papers addressing from various sides the foundational questions of the dynamic theories of meaning It includes contributions of writers who are commonly held as authorities concerning the turn who however here concentrate more on the why s than on the how s of dynamic semantics Hence the book should be of interest both for those who want to know what the turn is about and for those who are not satisfied with knowing the technical side of dynamic semantics and want to know its point **Dynamic Sociology**
