

## Employee Self-Service (ESS) Time Approval

Supervisors are required to utilize the Employee Self-Service interface in [myOleMiss](#) to approve eligible employees' attendances and absences for payroll. In general, permanent employees who do not record their time against Facilities Management or Telecommunications work orders are required to log into the myOleMiss portal to record their time. Employees who currently use approved time clock systems, student employees, and Rebel Reserve employees may not use the online timesheet and should continue to utilize [Form UM4/HR12](#).

The ESS Timesheet and Time Approval applications use the reporting/routing relationship that is set up for annual performance appraisals. When an employee enters and submits their time using ESS, an email is sent to their supervisor notifying them that they have time to be approved. If a change is needed in the reporting relationship, please email [Judy Hopper](#) in the Department of Human Resources and include the name and employee number of employee(s) requiring changes. Alternatively, you may provide an updated organization chart.

Navigate to [myOleMiss](#) and log in using your WebID and password.

Click the Employee tab. Then, click the box to maximize the Apps selection box under "My HR Tools."

of balancing the power system      **Survey of English Dialects** Clive Upton, David Parry, John Widdowson, 2013-10-08 First Published in 1994 The Survey of English Dialects SED is the only detailed nation wide dialect survey which has ever been conducted in England The SED is a unique repository of data on the traditional dialects of England in the mid twentieth century This remarkable record is a valuable resource for scholars in the fields of British English dialectology sociolinguistics and English historical linguistics The SED fieldwork was undertaken in predominantly rural communities in England in the middle of the twentieth century at a time when social domestic and working life was undergoing very significant changes The SED is thus a record of speech which reflects a society different in many ways from today and as such affords the possibility of comparison which is instructive to those engaged in all types of study of linguistics today      Advanced Technologies for Modeling, Optimization and Control of the Future Distribution Grid Ningyi Dai, Yi Ding, Jiawei Wang, Dongdong Zhang, 2022-04-20      Control of Standalone Microgrid Anuradha Tomar, Prerna Gaur, Ritu Kandari, Neeraj Gupta, 2021-07-08 Control of Standalone Microgrid looks at a practical and systematic elaboration of the architecture design and control of standalone microgrids It is oriented towards more advanced readers who want to enhance their knowledge in the fields of power engineering sustainable energy microgrids and their control With an enriched collection of topics pertaining to the architecture and control of standalone microgrids this book presents recent research that will bring advancements in the current power system scenario discussing operational and technical issues due to high penetration of distributed generation units Including executable plans for standalone microgrid systems this book enables researchers and energy executives to understand the future of energy delivery systems as well as global case studies and models to apply control techniques for standalone microgrids and protection schemes which provide a deeper level of understanding Includes significant case studies and global case studies of control techniques and protection schemes Provides a working guideline in the design analysis and development of Standalone microgrid and its applications Features detailed description of the types and components of standalone microgrids modeling and simulation and performance analysis      **100 Years of Telephone Switching** Robert J. **Forecasting and Control Methods for Energy Storage Systems in Distribution Networks** William Holderbaum,Feras Alasali,Ayush Sinha,2023-01-07 This book describes the stochastic and predictive control modelling of electrical systems that can meet the challenge of forecasting energy requirements under volatile conditions The global electrical grid is expected to face significant energy and environmental challenges such as greenhouse emissions and rising energy consumption due to the electrification of heating and transport Today the distribution network includes energy sources with volatile demand behaviour and intermittent renewable generation This has made it increasingly important to understand low voltage demand behaviour and requirements for optimal energy management systems to increase energy savings reduce peak loads and reduce gas emissions Electrical load forecasting is a key tool for understanding and anticipating the highly stochastic behaviour of electricity demand and for developing optimal energy management systems Load forecasts especially of the probabilistic variety can support more informed planning and management decisions which will be essential for future low carbon distribution networks For storage devices forecasts can optimise the appropriate state of control for the battery There are limited books on load forecasts for low voltage distribution networks and even fewer demonstrations of how such forecasts can be integrated into the control of storage This book presents material in load forecasting control algorithms and energy saving and provides practical guidance for practitioners using two real life examples residential networks and cranes at a port terminal **Emerging Trends in Electrical, Communications, and Information Technologies** T.
