The Enzymes of Biological Membranes Anthony Martonosi,2012-12-06 Much of the information currently available on the transport systems of bacterial and animal cell membranes and their mode of coupling to metabolic supply of energy can be found in this volume Consideration of the participating enzymes dictated the choice of topics Several transport systems where little information is available on the enzymology of the process are not included while separate chapters deal with y glutamyl transpeptidase and intestinal disaccharidases which meet many of the requirements of transport enzymes The volume also includes two chapters on photosynthetic membranes as a general introduction to the topic Other aspects of biological transport and photosynthesis will be developed in detail in a forthcoming volume now in preparation These chapters reveal the excitement and rapid advance of the field the daily reports of new concepts new techniques and new experimental findings which instantly interact to generate further progress Our aim was to provide a starting point for those who are just beginning and an opportunity for others to stop take stock and start in a new direction My warmest thanks to all who contributed to this volume *The Physiology of Polyamines, Volume I* Uriel Bachrach,Yair M. Heimer,2021-05-30 The area of polyamines is presented in this useful two volume publication Basic information describing the role of polyamines in the processes of growth and differentiation is given Also included are data on the regulation of polyamine biosynthesis and metabolism and their interactions with nucleic acids Several chapters are devoted to the role of polyamines in various

aspects of plant biology with a special emphasis on their participation in the response of plants to extreme environments. Special attention is given to the use of inhibitors of polyamine biosynthesis as potential antitumor and antiproliferative agents. Additionally, progress in the molecular biology and genetic engineering of genes coding for polyamine biosynthetic enzymes is described. Cancer researchers, biologists, geneticists, biochemists, physiologists, and clinicians will find this volume indispensable.

Immunochemistry of Proteins M. Zouhair Atassi, 2012-12-06. The structural features responsible for the immunogenicity of certain parts of native protein molecules have been of interest to immunochemists and protein chemists for over three decades. Following the early work of Landsteiner in 1942, which showed that peptide fragments from silk fibroin exhibited an inhibitory activity toward the reaction of the protein with its antibodies, fragments from many other protein systems have been isolated and studied. However, no concerted effort was or could be devoted to the elucidation of the complete antigenic structure of a protein. In order for these endeavors to be successful and meaningful, knowledge of both the amino acid sequence and the detailed three-dimensional structure of the protein is necessary. Such information was not available for a protein until early in the 1960s. This and the fact that protein chemistry was not in fact sufficiently developed early in the 1960s to enable the successful completion of the entire antigenic structure of a protein were major contributing factors for the slow progress in this field. Determination of the antigenic structures of proteins therefore posed a chemical challenge of enormous proportions. For these reasons, many investigators diverted their attention to study of the immunochemistry of homo or mixed amino acid polymers in the hope that the information derived from these systems might prove useful in the understanding of the immunochemistry of proteins.

Contemporary Nephrology Saulo Klahr, Shaul G. Massry, 2012-12-06. This volume is the first of a biannual series entitled Contemporary Nephrology. The series intends to provide the reader with a broad authoritative review of the important developments that have occurred during the previous two years in the major areas of both basic and clinical nephrology. We have been fortunate to enlist a distinguished group of scientists, teachers, and clinicians to serve as members of the Editorial Board of this series. We are grateful to them for the outstanding contributions they have made to this first volume of Contemporary Nephrology. This volume has fifteen chapters. The first four chapters deal with more basic aspects of nephrology: Membrane Transport (Schafer), Renal Physiology (Knox and Spielman), Renal Metabolism (Schwartz and Renal Prostaglandins (Dunn). Chapters 5-10 are more pathophysiologically oriented and each contains an appropriate mix of basic and clinical information. This group of chapters includes Acid-Base Physiology and Pathophysiology (Arruda and Kurtzman), Mineral Metabolism in Health and Disease (Agus, Goldfarb, and Wessert), Hypertension and the Renin-Angiotensin-Aldosterone Axis (Williams and Hollenberg), Immunologically Mediated Renal Disease (Glasscock), Acute Renal Failure and Toxic Nephropathy (Anderson and Gross), and the Kidney in Systemic Disease (Martinez Maldonado). The last five chapters, which are more clinically oriented, include Uremia (Friedman and Lundin), Nutrition in Renal Disease (Mitch), Dialysis (Maher), Renal Transplantation (Strom), and finally, Drugs and the Kidney (Bennett).

Subject

Guide to Children's Books in Print 1997 Bowker Editorial Staff, R R Bowker Publishing, 1996-09 The Biochemistry of the Carotenoids T. Goodwin, 2012-12-06 The carotenoids are not only amongst the most widespread of the naturally occurring groups of pigments but probably also have the most varied functions witness their known roles in photokinetic responses of plants in phototropic responses of fish and as vitamin A precursors in mammals and birds Pigments with such wide distribution and such diverse functions are obviously of great interest to biological scientists with very different specializations especially as it is unlikely that the study of the functions of carotenoids is anywhere near complete The primary aim of the present work is to discuss the distribution bio genesis and function of the carotenoids throughout the plant and animal kingdoms in such a way that because of rather than in spite of its bio chemical bias it will be of value to workers interested in all the biological aspects of these pigments The biochemical approach is considered the most effective because generally speaking most progress in the study of carotenoids in living material has been achieved using biochemical techniques be they applied by zoologists botanists entomologists microbiologists or other specialists what is even more important is that a consideration of the present position makes it certain that further fundamental progress will also be made along biochemical lines *British Book News* ,1972
