Essays On Production Theory And Planning:

Essays on Production Theory and Planning Günter Fandel, Harald Dyckhoff, Joachim Reese, 2012-12-06 The thirteen essays of this book deal with various aspects of production management which have shown a growing importance in research teaching and practice within the last years and are partly neglected in the literature The contents range from theoretical issues to case studies Significant relations among different essays chapters give rise to group them into four major parts dealing with separate themes of production management fundamental organizational aspects of the production process general problems and modern concepts of materials management joint production with surplus waste and hazardous byproducts production aspects of cutting stock and trim loss problems Moreover there is a strong material connection between the contributions to this volume because they all are based on a common conceptual framework emphasizing the production theoretic foundation The collection of papers in this book is also designed to provide a fairly comprehensive picture of scientific work in the field of production management done during the last years at the Institute of Production Economics of the Fern universiUit in Hagen partly in cooperation with other scientists Since all but two articles have not been published in English before the reader gets quite a new view on the results of this recent research *Essays on*

Production Theory and Planning G. Fandel, Harald Dyckhoff, 1988 **Supply Chain Management and Reverse Logistics**

Harald Dyckhoff, Richard Lackes, Joachim Reese, 2013-06-05 The world of logistics has considerably changed due to globalization modern information technology and especially increasing ecological awareness Large Supply Chain Management SCM systems are developing to global logistic networks This book reflects major trends of the recent decade in SCM and additionally presents ideas and visions for logistic networks of the 21st century Among the various aspects of SCM emphasis is placed on reverse logistics closing the loop of a supply chain by integrating waste materials into logistic management decisions **Theory of Production and Cost** Günter Fandel, 2012-12-06 Production theory and the theory of

cost both belong to the central areas of business administration for all considerations concerning the economic organization of industrial manufacturing processes start from these Two developments in the past 30 years have had a considerable influence on the structure and the concentration on points of emphasis in this book I am referring to findings from KOOPMANS activity analysis and to the formulation by GUTENBERG of a production function concept that focuses on industrial production processes Activity analysis has made it possible to develop from a uniform approach different types of production functions which describe the concrete principles of production in the productive sector of a business enterprise this has created a common basis for all production concepts in business administration The Gutenberg Production Function with its different kinds of adjustment to a changing output has opened up a flexibility to theoretical and practical considerations that gave rise to a large number of additional studies in this area Considerations in cost theory were in particular need of considerable extensions in the direction of cost minimal combined adjustment processes By means of the

organization of its contents this book will take both approaches into due account In that way it is vastly different from other books dealing with the same subject As a matter of course traditional analytical methods and ways of thinking also constitute a large part of the book

New Directions for Operations Research in Manufacturing Günter Fandel, Thomas Gullledge, Albert Jones, 2012-12-06 Basically five problems areas are addressed by operations research specialists in the manufacturing domain theoretical and practical aspects in production planning facility layout inventory control tool management and scheduling Some of these problems can be solved off line while others must be treated as real time problems impacted by the changing state of the system Additionally all of these problems have to be dealt with in an integrated systems framework Several new topics have recently appeared in the scientific literature which now attract the interest of operations researchers These include distributed real time scheduling hierarchical and heterarchical control systems integrated algorithms for design process planning and equipment level programming material handling in a finite capacity resource environment and designing and implementing distributed data management systems The contributions of these proceedings represent new and unique theoretical developments and applications related to these new topics They deal with modelling production structures and applying expert systems or neural networks to production systems Mathematical programming control theory simulation genetic algorithms tabu search and simulated annealing are applied as solution techniques

Modern Production Concepts Günter Fandel, Günther Zäpfel, 2012-12-06 Modern production concepts can be considered as an essential field of economics nowadays They help to give valuable insights and thus provide important competitive advantages There is a broad variety of new approaches to Production Planning and Control PPC Just in Time JIT Flexible Manufacturing Systems FMS Flexible Automation FA Automated Guided Vehicle Systems AGVS Total Quality Control TQC and Computer Integrated Manufacturing CIM all of which are indispensable cornerstones in this context This book presents in a condensed and easy to comprehend form the different contributions of a group of internationally recommended scientists The varied approaches to modern production concepts are not only based on theoretical foundations but also go one step further in that they present the implementation of these concepts and methods in detail This close link with practical aspects will help to illuminate the theoretical material for researchers and students in universities The book will be of major importance for practitioners involved in solving everyday industrial problems The interdisciplinary nature of these contributions will help to create a new and valuable perspective on the field of production concepts

Nonlinear Economic Dynamics Tõnu Puu, 2013-03-14 The present study is a preliminary draft on nonlinear economic dynamics with which the author has been concerned the last years It grew out from the joint work by Professor Martin Beckmann and the present author on nonlinear statics in spatial economics Beckmann and Puu Spatial Economics North Holland 1985 The monograph mentioned contains sections on price waves and business cycles but in a linear format The rest is static theory The author has finally come to the conviction that linear dynamic modelling has very little to yield This is due to the poor set of

alternatives decay or explosion of motion pertinent to linear models Therefore the present work centres on non linearity Another distinction is that only purely causal models are dealt with as those formatted as inter temporal equilibria hardly belong to the more restricted field of dynamics The spatial origin is visible in the choice of models Chapter 2 summarizes the work by the author on the structural stability of continuous spatial market equilibrium models Chapter 3 deals with a reformulation of the ingenious population growth and diffusion model invented by the young Hotelling in 1921 Chapter 4 is a detailed digression on business cycle models in a continuous spatial format with interregional trade

15th International Conference on Soft Computing Models in Industrial and Environmental Applications (SOCO 2020) Álvaro Herrero, Carlos Cambra, Daniel Urda, Javier Sedano, Héctor Quintián, Emilio Corchado, 2020-08-28 This book contains accepted papers presented at SOCO 2020 conference held in the beautiful and historic city of Burgos Spain in September 2020 Soft computing represents a collection or set of computational techniques in machine learning computer science and some engineering disciplines which investigate simulate and analyze very complex issues and phenomena After a thorough peer review process the SOCO 2020 International Program Committee selected 83 papers which are published in these conference proceedings and represents an acceptance rate of 35% Due to the COVID 19 outbreak the SOCO 2020 edition was blended combining on site and on line participation In this relevant edition a special emphasis was put on the organization of special sessions Eleven special session were organized related to relevant topics such as Soft Computing Applications in Precision Agriculture Manufacturing and Management Systems Management of Industrial and Environmental Enterprises Logistics and Transportation Systems Robotics and Autonomous Vehicles Computer Vision Laser Based Sensing and Measurement and other topics such as Forecasting Industrial Time Series IoT Big Data and Cyber Physical Systems Non linear Dynamical Systems and Fluid Dynamics Modeling and Control systems The selection of papers was extremely rigorous in order to maintain the high quality of SOCO conference editions and we would like to thank the members of the Program Committees for their hard work in the reviewing process This is a crucial process to the creation of a high standard conference and the SOCO conference would not exist without their help

Optimal Dynamic Investment Policies of a Value Maximizing Firm Peter M. Kort, 2012-12-06 1 1 Scope of the Book This book is a contribution to the area of dynamic models of the firm The motivation for this kind of research is the following Empirical studies e g Albach 1976 have shown that the development of the firm over time can be divided into different stages such as growth stationarity and contraction In order to understand and evaluate these stages in a proper way it is important to develop a suitable theoretical framework To that end economists have applied dynamic mathematical techniques such as optimal control theory calculus of variations and dynamic programming to design and analyse dynamic models of the firm In this way the economic theory of the firm is extended to a dynamic context Within the field of the dynamics of the firm this book develops a general investment decision rule based on the concept net present value of marginal investment which is applicable in deterministic dynamic models of

the firm studies the influence of adjustment costs of investment on optimal dynamic firm behavior extends the stochastic dynamic theory of the firm by connecting it with a dynamic version of the Capital Asset Pricing Model Before elaborating on the dynamics of the firm we first review the subject of net present value in the classical analysis

Computer-Based Management of Complex Systems Peter M. Milling, Erich O.K. Zahn, 2012-12-06 Especially during the last decade the systems approach gained wide spread attention and increased influence in the world of academics and business The holistic view of how individual elements interact with each other to form an entity not a collection of isolated parts becomes more and more important Whether it is called integration as in Computer Integrated Manufacturing organism in ecological studies or network like the communication network it is the system's idea which opens new dimensions for insights applications and development System Dynamics or Industrial Dynamics as it was called during its early years by its founder and mentor M I T's now Professor Emeritus Jay W Forrester pioneered the use of system concepts and computer simulation for the analysis of complex problems in business and management It was applied to study the dynamics of corporations cities national economies and finally the global problems of man and in his limited and fragile environment The field has reached a stage of self sustained development and momentum A few years ago the System Dynamics Society was founded a high quality academic journal is now published in its fifth volume and the annual International Conferences of the Society were institutionalized and took place in America Europe and Asia The organization of international meetings for this scientific community however is older than the System Dynamics Society itself The first conventions were held as special sections of conferences devoted to simulation or cybernetics

Post-Keynesian Essays from Down Under Volume IV: Essays on Theory G. Harcourt, Peter Kriesler, Joseph Halevi, John Nevile, 2019-03-15 Joseph Halevi G C Harcourt Peter Kriesler and J W Nevile bring together a collection of their most influential papers on post Keynesian thought Their work stresses the importance of the underlying institutional framework of the economy as a historical process and therefore of path determinacy In addition their essays suggest the ultimate goal of economics is as a tool to inform policy and make the world a better place with better being defined by an overriding concern with social justice Volume IV explores theory

Unique Solutions for Strategic Games Werner Güth, Brigitte Kalkofen, 2012-12-06 This book develops a general solution concept for strategic games which resolves strategic uncertainty completely The concept is described by a mathematically formulated solution procedure and illustrated by applying it to many interesting examples A long nontechnical introduction tries to survey and to discuss the more technical parts of the book The book and especially the introduction provide firm and consistent guidance for scholars of game theory There are many open problems which could inspire further research efforts

Performance Evaluation Harald Dyckhoff, Rainer Souren, 2020-01-13 This book examines performance evaluation in the context of assessing the non financial outcomes of human activities The topic is particularly relevant when economic environmental or social performance has to be evaluated e.g. the efficiency of actions and the lifecycles of products The

authors combine multi criteria decision making and production theories to develop a theoretical and methodological foundation for performance evaluation They also demonstrate the typical pitfalls that are hindering the implementation of contemporary methods in practice Special emphasis is placed on efficiency measurement with data envelopment analysis DEA and on data aggregation in life cycle assessment LCA **Production Research** Mark Pridham, Christopher O'Brien, 1991 **Equity, Incentives, and Taxation** Georg Tillmann, 2012-12-06 Redistribution is one of the most fundamental issues in welfare economics In connection with this term the following questions directly arise What is a good redistribution Which governmental instruments should be used to attain it Is there a best instrument if several of them are available Or to express it more generally which allocations are at all attainable if special instruments are at hand All these questions are formulated in an extremely vague way It will be the task of the following work to make these questions precise and to give answers as far as possible It is a matter of course that these answers will not be exhaustive because redistribution is too wide a field I have used the word instrument intentionally In doing so I wanted to indicate that it is not necessary to restrict oneself to income or commodity taxes as is common place in public finance when aiming at redistribution **A Critical Essay on Modern Macroeconomic Theory** Frank Hahn, Robert M. Solow, 1997 In the early 1980s rational expectations and new classical economics dominated macroeconomic theory This essay evolved from the authors profound disagreement with that trend It demonstrates not only how the new classical view got macroeconomics wrong but also how to go about doing macroeconomics the right way The Palgrave Handbook of Political Economy Ivano Cardinale, Roberto Scazzieri, 2018-08-16 This book is a major contribution to the study of political economy With chapters ranging from the origins of political economy to its most exciting research fields this handbook provides a reassessment of political economy as it stands today whilst boldly gesturing to where it might head in the future This handbook transcends the received dichotomy between political economy as an application of rational choice theory or as the study of the causes of societies material welfare outlining a broader field of study that encompasses those traditions This book will be essential reading for academics researchers students and anyone looking for a comprehensive reassessment of political economy

An Essay on Econ Growth and Plan Maurice Dobb, 2011-03-21 This important essay dates from the end of the fifties During this era the dominant theories of economic growth were based on conditions of private ownership of capital and where investment is primarily under the control of private individuals or firms Dobb however considers the alternatives He asks Do such theories have a more universal application Can they be applied to planned economies If they can in what form may such an application be made Half a century later with the global regime of unfettered international capital markets in a state of utter collapse the time has come for a return to the possibility of rational social and economic planning This short clear book is again a necessary theoretical starting point for a post capitalist future **Nonlinear and Multisectoral Macrodynamics** Kumaraswamy Velupillai, 1990-06-18 A collection of essays concerned with nonlinear and multisectoral

macrodynamics written in honour of Richard Goodwin which includes discussion of Goodwin's contribution and ideas in comparison with other theories *Essays in the Theory of Economic Fluctuations* M. Kalecki, 2013-10-08 These essays though formally independent nevertheless constitute a whole each one preparing the way for the succeeding chapter
