preoccupied with the immediate problems of the Great Depression the generation of economists that came to the forefront in the 1930s also looked ahead to the long term consequences of the crisis and proposed various solutions to prevent its recurrence Theodore Rosenof examines the long run theories and legacies of four of the leading members of this generation John Maynard Keynes of Great Britain who influenced the New Deal from afar Alvin Hansen and Gardiner Means who fought over the direction of New Deal policy and Joseph Schumpeter an opponent of the New Deal Rosenof explores the conflicts that arose among long run theorists arguing that such disputes served eventually to set the stage for the emergence and domination of a short run Keynesian approach to economic policy that collapsed under the impact of 1970s stagflation Tracing the subsequent revival of long run theories Rosenof demonstrates their relevance to an understanding of the economy's problems over the past quarter century and to the current debate over public policy Originally published in 1997 A UNC Press Enduring Edition UNC Press Enduring Editions use the latest in digital technology to make available again books from our distinguished backlist that were previously out of print These editions are published unaltered from the original and are presented in affordable paperback formats bringing readers both historical and cultural value **Incentive**

Smith, 2017-09-29 Explanations for inflation had for a long time been ceded to the purview of economists The acceleration in rates of inflation within advanced economies during the 1960s and 1970s however prompted sociologists and political scientists to attempt their own accounts for this phenomenon There are two major competing explanations of the postwar inflation One most commonly held by economists is that inflation has been produced by governments through a combination of policy errors and cynical manipulation of policy for electoral purposes The other often advanced by sociologists and political scientists as an alternative is that inflation has been an outcome of class conflict In his study that ranges widely over the literature in the relevant disciplines Smith examines the strengths and weaknesses of each account with particular attention to the evidence presented in support of class conflict explanations He concludes that on balance the policy error cynical manipulation explanation is better supported than its class conflict rival The clarity with which Smith presents these rival accounts and the critical rigor of his scrutiny make this a work of interest to advanced students in macroeconomic theory and to policy makers

King, 2012-12-06 LE King Michael Kalecki 1899 1970 was one of the most important and also one of the most underrated economists of the twentieth century In the 1930s he made a series of fundamental contributions to macroeconomic theory which anticipated complemented and in some ways surpassed those of Keynes Almost entirely self educated in economics and influenced much more by Marxism than by mainstream theory Kalecki very largely escaped the fatal embrace of pre Keynesian orthodoxy which blunted the thrust of the General Theory Many Post Keynesians in particular have found in his work the elements of a convincing alternative to what Joan Robinson Kalecki's greatest advocate in the English speaking world was scathingly to describe as bastard Keynesianism But Kalecki was never interested in theory for its own sake He approached economics from a practical perspective wrote extensively on applied and policy questions and in the final decades of his life turned his attention increasingly to problems of economic development and the management of state socialist economies Elgar Encyclopedia of Post-Keynesian Economics Louis-Philippe Rochon, Sergio Rossi, 2023-01-13 This Encyclopedia is an invaluable reference book for post Keynesian and heterodox economics It consists of 300 entries written by 180 different authors The volume includes entries on key concepts of interest to post Keynesians as well as descriptions of some of the seminal books in the post Keynesian tradition It will interest both students and scholars of heterodox economics as well as policy makers around the world looking for a better alternative to mainstream economic policies at national and international levels in the aftermath of the global financial crisis that burst in 2008 and the COVID 19 pandemic crisis that began in 2020 **Advances in Endogenous Money Analysis** Louis-Philippe Rochon, Sergio Rossi, 2017-10-27 The endogenous nature of money is a fact that has been recognized rather late in monetary economics Today it is explained most comprehensively by the theory of money in post Keynesian monetary theory The expert contributors to this enlightening book revisit long standing debates on the endogeneity of money from the position of both horizontalists and structuralists and prescribe new areas of research and debate for post Keynesian scholars to explore **Distributional Conflict and Inflation** R. sector distributional conflicts as well as government budgetary pressures on the money supply and the price level Attention is drawn to the costs of non accommodative policies in a conflict setting and to the additional difficulties of non accommodation likely associated with the use of exchange rate pegging as a disinflation device *Encyclopedia of Political Economy* Phillip O'Hara,1999-02-04 Content Description Includes bibliographical references and index [Business Cycles and Depressions](#) David Glasner,2013-12-16 Experts define review and evaluate economic fluctuations Economic and business uncertainty dominate today s economic analyses This new Encyclopedia illuminates the subject by offering 323 original articles on every major aspect of business cycles fluctuations financial crises recessions and depressions The work of more than 200 experts including many of the leading researchers in the field the articles cover a broad range of subjects including capsule biographies of leading economists born before 1920 Individual entries explore banking panics the cobweb cycle consumer durables the depression of 1937 1938 Otto Eckstein Friedrich Engels experimental price bubbles forced savings lass Steagall Act Friedrich hagen qualitative indicators use of macro econometric models monetary neutrality Phillips Curve Paul Samuelson Say s law supply side recessions James Tokin trend and random wages Thorstein Veblen worker job turnover and more
