

7. Approaches To Public Utility Pricing

1. Introduction

This chapter is an attempt to review some important problems in the theory of public utility pricing with particular emphasis on postal services. Some of these problems have their genesis in a distinguishing characteristic of many public utilities : joint production of several items with increasing returns to scale. This poses the difficult problem of allocation of joint costs among these items.

There are two interrelated but analytically separable issues here:

- (i) The fact that there are increasing returns to scale may lead to the development of the 'natural' monopoly.
- (ii) Because several items are being jointly supplied, each such item must have adequate incentive to stay with the 'monopoly' or, alternatively, be able to face the competition from another agency that may be supplying just this item or a subset of such items. Any regulation of this 'monopoly' must pay heed to these issues.

One method of regulation that is able to give due emphasis to both these issues and which has been the subject of intense scrutiny in the literature is the so-called cross-subsidy-free prices which are Pareto optimal. Another such regulatory mechanism
