**Analysis, Optimization and Control of Grid-Interfaced Matrix-Based Isolated AC-DC Converters** Jaydeep Saha, 2022-11-05. This book presents novel contributions in the development of solid state transformer (SST) technology both for medium voltage (MV) and low voltage (LV) utility grid interfaces which can potentially augment the grid modernization process in the evolving power system paradigm. For the MV interface, a single stage AC/DC SST submodule topology has been proposed and its modulation and soft switching possibilities are analysed, experimentally validated and adequately benchmarked. A control scheme with power balance capability among submodules is developed for MV grid connected single stage AC/DC SST for smooth operation under inevitable parameter drift scenario and experimental validation shows excellent performance under drastic load change conditions. A novel machine learning aided multi objective design optimization framework for grid connected SST is developed and experimentally validated which equips a power electronics design engineer with meagre computational resources to find out the most optimal SST design in a convenient time frame. This book has also contributed towards the development of dual active bridge (DAB) type and non DAB type LV grid interfaced isolated AC/DC converters by providing solutions to specific topology and modulation related shortcomings in these two types of topologies. A comprehensive comparison of the DAB and non DAB type LVAC/LVDC converters reveals the superiority of DAB type conversion strategy.
