

## Accounting Theory

The beginning of the 'trade' era marked the birth of one of the most significant concepts of business world known as Accounting. In simplest terms, accounting can be defined as the art of 'systematic recording, reporting and analysis of financial transactions of a business' [WebFinance Inc.].

This practice can be traced from thousands of years back when people relied on primitive accounting methods to record the growth of crops and herds. Today accounting is considered as the 'backbone' of most successful businesses. Since old days, a number of theories have been tested and incorporated that have lead to the evolution of accounting practices over the years.

The growing demand of globalisation in the business world marked the necessity to use accounting with 'specific rules and regulations' in order for it to be 'reliable and comprehensible.' It would be complete chaos if each business follows its own rules, grammar and vocabulary to record transactions.

As stated by Michael Russel in his paper 'The Origin of Accounting Theory', 'The first prerequisite is that accounting should agree with the basic truths according to which our economic system functions. Accounting theory (therefore) creates a framework that ensures that accounting practice complies with the requirements of conformity and uniformity.'

[Russel] Like any other theory, accounting theory is also based on a set of rational ideas which in this case is 'the economic truths'; and these ideas and principles have evolved over time depending on the need of the business. However, the common elements or in other words, the fundamental backbone of accounting is still the same which includes 'bookkeeping' (Gaffikin, 2008, pg. 16).

What has actually changed is the techniques employed in carrying out this task and this is mainly due to the drastic advancement in information technology. 'Many accountants are now involved with the provision of financial advice rather than mechanical recording and reporting procedures. In addition, the form of this advice has also changed.

'It once involved cost reporting and analysis of financial statements; it now involves modern information technology media.' (Gaffikin, 2008, pg. 18)

Despite these developments, the evolution of accounting theories has faced some major challenges. First one deals with reporting of non-financial 'events' such as performance of employees in the firm. 'Should their performance be measured based on educational backgrounds, work experiences or the expenditure that their employers pay on them?'

Contextualizing Entrepreneurship Theory Ted Baker, Friederike Welter, 2020-02-13 As the breadth and empirical diversity of entrepreneurship research have increased rapidly during the last decade the quest to find a one size fits all general theory of entrepreneurship has given way to a growing appreciation for the importance of contexts This promises to improve both the practical relevance and the theoretical rigor of research in this field Entrepreneurship means different things to different people at different times and in different places and both its causes and its consequences likewise vary For example for some people entrepreneurship can be a glorious path to emancipation while for others it can represent the yoke tethering them to the burdens of overwork and drudgery For some communities it can drive renaissance and vibrancy while for others it allows only bare survival In this book we assess and attempt to push forward contemporary conceptualizations of contexts that matter for entrepreneurship pointing in particular to opportunities generating new insights by attending to contexts in novel or underexplored ways This book shows that the ongoing contextualization of entrepreneurship research should not simply generate a proliferation of unique theories one for every context but can instead result in better theory construction testing and understanding of boundary conditions thereby leading us to richer

and more profound understanding of entrepreneurship across its many forms Contextualizing Entrepreneurship Theory will critically review the current debate and existing literature on contexts and entrepreneurship and use this to synthesize new theoretical and methodological frameworks that point to important directions for future research Handbook on the History of Economic Analysis Volume I Gilbert Faccarello, Heinz D. Jongbloed, P.A. Maassen, G. Neave, 2013-03-14 In order to celebrate the fifteenth anniversary the third lustrum of our Center we at CHEPS decided to collectively write a book on the issue of how higher education institutions deal with the demand for change Institutional change is without any doubt one of the burning issues for researchers in higher education and policy studies in general but even more so for administrators at the institutional level institutional leadership deans and planners of higher education in public life government agencies intermediary organisations international organisations Whereas the lustrumbook we wrote for our second lustrum concentrated on comparative policy studies many of them focusing on comparisons between different national higher education systems this time the object of our analyses is the institution itself Today's higher education institutions are faced by demands from a multitude of actors from inside the institution students staff as well as from the institution's environment governments employers research councils sponsors These demands require changes in policy practice systems and culture

The ways in which institutions respond to these demands and how their behaviour may be understood and predicted is the challenge tackled by the authors of this volume each from their own perspective and each looking at different aspects of the educational organisation
