Bäck,2014-07-02 This book investigates Aristotle's views on abstraction and explores how he uses it In this work the author follows Aristotle in focusing on the scientific detail first and then approaches the metaphysical claims and so creates a reconstructed theory that explains many puzzles of Aristotle's thought Understanding the details of his theory of relations and abstraction further illuminates his theory of universals Some of the features of Aristotle's theory of abstraction developed in this book include abstraction is a relation perception and knowledge are types of abstraction the objects generated by abstractions are *relata* which can serve as subjects in their own right whereupon they can appear as items in other categories The author goes on to look at how Aristotle distinguishes the concrete from the abstract paronym how induction is a type of abstraction which typically moves from the perceived individuals to universals and how Aristotle's metaphysical vocabulary is relational Beyond those features this work also looks at how of universals accidents forms causes and potentialities have being only as abstract aspects of individual substances An individual substance is identical to its essence the essence has universal features but is the singularity making the individual substance what it is These theories are expounded within this book One main attraction in working out the details of Aristotle's views on abstraction lies in understanding his metaphysics of universals as abstract objects This work reclaims past ground as the main philosophical tradition of abstraction has been ignored in recent times It gives a modern version of the medieval doctrine of the threefold distinction of essence made famous by the Islamic philosopher Avicenna Aristotle on Earlier Greek Psychology Jason W.

Carter,2019-03-21 Argues that Aristotle's psychology is shaped by his critical reception of earlier theories of soul including the Presocratic and Platonic **Philoponus: On Aristotle Posterior Analytics 1.19-34** ,2014-04-22 Aristotle described the scientific explanation of universal or general facts as deducing them through scientific demonstrations that is through syllogisms that met requirements of logical validity and explanatoriness which he first formulated In Chapters 19-23 he adds arguments for the further logical restrictions that scientific demonstrations can neither be indefinitely long nor infinitely

extendible through the interposition of new middle terms Chapters 24-26 argue for the superiority of universal over particular demonstration of affirmative over negative demonstration and of direct negative demonstration over demonstration to the impossible Chapters 27-34 discuss different aspects of sciences and scientific understanding allowing us to distinguish between sciences and between scientific understanding and other kinds of cognition especially opinion Philoponus comments on these chapters are interesting especially because of his metaphysical analysis of universal predication and his understanding of the notion of subordinate sciences We learn from his commentary that Philoponus believed in Platonic Forms as inherent in and posterior to the Divine Intellect but ascribed to Aristotle an interpretation of Plato's Forms as independent substances prior to the Demiurgic Intellect A very important notion from Aristotle's Posterior Analytics is that of the subordination of sciences i.e. the idea that some sciences depend on higher ones for some of their principles Philoponus goes beyond Aristotle in suggesting a taxonomy of sciences in which the subordinate science concerns the same scientific genus as the superordinate but a different species This volume contains the first English translation of Philoponus commentary as well as a detailed introduction extensive explanatory notes and a bibliography

Heidegger and the Destruction of Aristotle Sean D. Kirkland, 2023-07-15 A bold new conception of Heidegger's project of *Destruktion* as a method of interpreting history For Martin Heidegger our inherited traditions provide the concepts through which we make our world intelligible Concepts we can also oppose disrupt and even exceed First however if Western philosophy is our inheritance we must submit it to *Destruktion* starting with Aristotle Heidegger and the Destruction of Aristotle On How to Read the Tradition presents a new conception of Heidegger's destruction as a way of reading Situated between Nietzschean genealogy and Derridean deconstruction this method uncovers in Aristotle the most vital originating articulations of the Western tradition and gives us the means to confront it Sean D Kirkland argues this is not a rejection of the past but a sophisticated and indeed timely hermeneutic tool a complex illuminating and powerful method for interpreting historical texts at our present moment Acknowledging the historical Heidegger as a politically compromised and still divisive figure Kirkland demonstrates that Heideggerian destruction is a method of interpreting history that enables us to reorient and indeed transform its own most troubling legacies

Aristotle and the Science of Nature Andrea Falcon, 2005-09-08 Andrea Falcon's work is guided by the exegetical ideal of recreating the mind of Aristotle and his distinctive conception of the theoretical enterprise In this concise exploration of the significance of the celestial world for Aristotle's science of nature Falcon investigates the source of discontinuity between celestial and sublunary natures and argues that the conviction that the natural world exhibits unity without uniformity is the ultimate reason for Aristotle's claim that the heavens are made of a special body unique to them This book presents Aristotle as a totally engaged systematic investigator whose ultimate concern was to integrate his distinct
