

Philosophy of Biology

Philosophy of biology is the branch of philosophy of science that deals with biological knowledge. It can be practiced not only by philosophers, but also by scientists who reflect on their own work. The distinctive mark of philosophy of biology is the effort to achieve generalizations about biology, up to various degrees. For instance, philosophy of biology makes biology relevant to classic issues in philosophy of science such as causation and explanation, chance, progress, history, and reductionism. It also works to characterize how knowledge is acquired and modified in different areas of biology, and sometimes to clarify the criteria that demarcate science from non-science.

Philosophy also performs constructive criticism of biology. For example, it has an important role in analyzing cases of “naturalization”—when science becomes able to study issues that traditionally were the exclusive domain of philosophy. The life sciences and their objects are changing and growing exponentially. A challenge for philosophy of biology is thus to keep the pace, not only with new knowledge modifying long-standing ideas (for example, the “Tree of Life”), but also with new scientific practices and unprecedented kinds of data. Accordingly, philosophy of biology is constantly provoked in shifting its own methods and attention. In some cases, philosophy of biology can aid the life sciences to reach their goals, by means of conceptual analysis, linguistic analysis, and epistemological analysis.

Hybridizations and intersections between scientific fields are particularly conducive to philosophical considerations. Contemporary examples are ‘EvoDevo’ (the recent integration between development and evolution) and ‘cultural evolution’ (an approach to cultural change inspired by evolutionary biology). Theses and analyses of philosophy of biology are often entwined with history of biology and with the history of evolution. Finally, philosophy of biology can elaborate messages and general views out of biology, and has a crucial role in caring for how science is publicly interrogated and communicated.

Essays in Philosophical Biology William Morton Wheeler, 1967 **Essays in philosophical biology** William Morton Wheeler, 1939 **Essays in Philosophical Biology** William Morton Wheeler, 1967 Processes of Life John Dupré, 2012-01-26 John Dupré explores recent revolutionary developments in biology and considers their relevance for our understanding of human nature and human society Epigenetics and related areas of molecular biology have eroded the exceptional status of the gene and presented the genome as fully interactive with the rest of the cell Developmental systems theory provides a space for a vision of evolution that takes full account of the fundamental importance of developmental processes Dupré shows the importance of microbiology for a proper understanding of the living world and reveals how it subverts such basic biological assumptions as the organisation of biological kinds on a branching tree of life and the simple traditional conception of the biological organism These topics are considered in the context of a view of science as realistically grounded in the natural order but at the same time as pluralistic and inextricably integrated within a social and normative context The volume includes a section that recapitulates and expands some of the author's general views on science a section addressing a range of topics in biology including the significance of genomics the nature of the organism and the current status of evolutionary theory and a section exploring some implications of contemporary biology for humans for example on the reality or unreality of human races and the plasticity of human nature **The Understanding of Nature** Marjorie Grene, 2012-12-06 No student or colleague of Marjorie Grene will miss her incisive presence in these papers on the study and nature of living nature and we believe the new reader will quickly join the stimulating discussion and critique which Professor Grene steadily provokes For years she has worked with equally sure knowledge in the classical domain of philosophy and in modern epistemological inquiry equally philosopher of science and metaphysician Moreover she has the deeply sensible notion that she should be a critically intelligent learner as much as an imaginatively original thinker and as a result she has brought insightful expository readings of other philosophers and scientists to her own work We were most fortunate that Marjorie Grene was willing to spend a full semester of a recent leave here in Boston and we have on other occasions sought her participation in our colloquia and elsewhere Now we have the pleasure of including among the Boston Studies in the Philosophy of Science this generous selection from Grene's philosophical inquiries into the understanding of the natural world and of the men and women in it Boston University Center for the R S COHEN Philosophy and History of Science M W W ARTOFISKY April 1974 PREFACE This collection spans spottily years from 1946 On Some Distinctions between Men and Brutes to 1974 On the Nature of Natural Necessity **Contemporary Debates in Philosophy of Biology** Francisco J. defines the issues and paves the way for further discussion. Life and Evolution Lorenzo Baravalle, Luciana Zaterka, 2020-04-10 This book offers to the international reader a collection of original articles of some of the most skillful historians and philosophers of biology currently working in Latin American universities. During the last decades increasing attention has been paid in Latin America to the history and philosophy of biology but since many local authors prefer to write in Spanish or in Portuguese their ideas have barely crossed the boundaries of the continent. This volume aims to remedy this state of things providing a good sample of this production to the English speaking readers bringing together contributions from researchers working in Brazilian, Argentinean, Chilean, Colombian and Mexican universities. The stress on the regional provenance of the authors is not intended to suggest the existence of something like a Latin American history and philosophy of biology supposedly endowed with distinctive features. On the contrary the editors firmly believe that advances in this field can be achieved only by stimulating the integration in the international debate. Based on this assumption the book focuses on two topics: life and evolution and presents a selection of contributions addressing issues such as the history of the concept of life, the philosophical reflection on life, manipulation and life extension, the structure and development of evolutionary theory as well as human evolution. *Life and Evolution: Latin American Essays on the History and Philosophy of Biology* will provide the international reader with a rather complete picture of the ongoing research in the history and philosophy of biology in Latin America offering a snapshot of this dynamic community. It will also contribute to contextualize and develop the debate concerning life and evolution and the relation between the two phenomena.

From a Biological Point of View Elliott Sober, 1994-09-30 Elliott Sober is one of the leading philosophers of science and is a former winner of the Lakatos Prize, the major award in the field. This new collection of essays will appeal to a readership that extends well beyond the frontiers of the philosophy of science. Sober shows how ideas in evolutionary biology bear in significant ways on traditional problems in philosophy of mind and language, epistemology and metaphysics. Amongst the topics addressed are psychological egoism, solipsism and the interpretation of belief and utterance, empiricism, Ockham's razor, causality, essentialism and scientific laws. The collection will prove invaluable to a wide range of philosophers, primarily those working in the philosophy of science, the philosophy of mind and epistemology.

What the Philosophy of Biology Is M. Ruse, 2012-12-06 Philosophers of science frequently bemoan or cheer the fact that today, with the supposed collapse of logical empiricism, there are now 10 grand systems. However, although this may or may not be true and if true may or may not be a cause for delight, no one should conclude that the philosophy of science has ground to a halt, its problems exhausted and its practitioners dispirited. In fact, in

Theoretical Biology and Complexity Robert J. Rosen, 2013-09-03 Theoretical Biology and Complexity Three Essays on the Natural Philosophy of Complex Systems is made up of three short essays each separately conceived and written each with distinct thrusts and emphases but nevertheless closely related in substance and spirit All three spring from a common concern to grasp and comprehend the material basis of living systems The first essay is about the interaction between particles and the consequent observable manifestations It casts the analysis of the measurement process into an elegant dualism relating modes of description and explores the consequences of this dualism for what may be called classical physics The second essay explores the deeper consequences of representing the properties of natural systems through states built up out of observable quantities and the dynamics that such systems impose on each other through interactions The final essay argues that traditional modes of system representation involving fixed sets of states together with imposed dynamical laws strictly pertains only to an extremely limited class of systems called simple systems or mechanisms Systems not in this class are called complex and these can only be in some sense approximated locally and temporally by simple ones Such a radical alteration of viewpoint leads to a large number of concrete practical consequences some of which are described in the essay
