

Bibliographical Essays in Medieval Jewish Studies

THE STUDY OF JUDAISM
VOLUME II

An integrated collection of original essays on Jewish history, philosophy and rabbinics from late antiquity through the mid-17th century. Evaluates the sources and the scholarly literature in each field. Care has been taken to include both introductory surveys suitable for those approaching the subject for the first time as well as specialized articles and monographs.

"What does the study of medieval Jewish life and culture have to offer in and of itself?"

"The real question should be addressed, not to the history, but to the historian, not to the subject, but to the student. It concerns his fundamental seriousness. He should decide, once for all, whether his view of the Middle Ages does not remain parochial if it glosses over so ubiquitous a presence as that of the Jews. He must determine whether that which was created on the soil of Europe, Asia, or Africa in the Middle Ages is not part of "history" even when it does not directly affect majority history but develops in its own way and persists on its own terms. And if he affirms that he is indeed obliged to take the Jewish experience into account, he must further answer to himself whether he has fulfilled his function by a few scattered references which merely perpetuate established clichés.

"The rest, and perhaps the gravest aspect, concerns an obligation toward that ultimate illumination of the entire human condition which I assume to be the deepest *raison-d'être* of the common intellectual enterprise.

"The present work is the second volume of a bibliographic series in Judaica sponsored by the Anti-Defamation League of B'nai B'rith (the first, entitled *The Study of Judaism: Bibliographical Essays*, was published in 1972). Like its predecessor, it has been written by specialists who have addressed themselves primarily to the non-specialist. It should be welcomed not only by university teachers of courses in Jewish history and culture, but by those involved in any aspect of medieval studies generally, by students seeking bibliographic guidance, by librarians who would enrich the collections over which they preside, and, not least, by the interested layman eager to pursue his readings independently.

"What ultimately sets this volume apart from the usual bibliographic compendium is its style and scope. These are no mere compilations of books and articles of the type that so frequently repels or frustrates the novice anxious to explore a new domain. They are, in the fullest sense, bibliographic essays, offering critical evaluations of individual items, informed discussions of historical contexts, and a vivid sense of the state of scholarship on major problems. As a result, the reader should emerge not only with an enhanced knowledge of what is available, but with the ability to establish his own priorities on visits to the library or the bookstore."

Gauthier, 2013-03-09 Internal logic is the logic of content The content is here arithmetic and the emphasis is on a constructive logic of arithmetic

arithmetical logic Kronecker's general arithmetic of forms polynomials together with Fermat's infinite descent is put to use in an internal consistency proof The view is developed in the context of a radical arithmetization of mathematics and logic and covers the many faceted heritage of Kronecker's work which includes not only Hilbert but also Frege Cantor Dedekind Husserl and Brouwer The book will be of primary interest to logicians philosophers and mathematicians interested in the foundations of mathematics and the philosophical implications of constructivist mathematics It may also be of interest to historians since it covers a fifty year period from 1880 to 1930 which has been crucial in the foundational debates and their repercussions on the contemporary scene A Collection of Polish Works on Philosophical Problems of Time and Spacetime

Helena Eilstein, 2013-04-17 This is a collection of some works of Polish philosophers and physicists on philosophical problems of time and spacetime Without restricting the thematic scope of the papers the issue concerning objectivity of time flow runs as a uniting thread through most of them Partly it is discussed directly and partly the authors focus on themes which are of paramount importance for one's attitude to that question In the first six papers the authors deal with their topics against the background of contemporary physics its theories its difficulties and discussed conjectures For the paper of S Snihur that background is provided by everyday world outlook and the author discusses the problem of existence and character of the future in the light of basic principles of classical logic The paper of A P61awski about the views of the outstanding Polish philosopher Roman Ingarden enriches the thematic scope of the collection introducing into it some questions from philosophical anthropology and ethics JERZY GOLOSZ MOTION SPACE TIME Abstract The paper discusses the properties of spacetime we study by analyzing the phenomenon of motion Of special interest are the spacetime symmetries the spacetime structures and the ontological status of spacetime These problems are considered on the grounds of the classical theories of motion contained in Newtonian physics special and general theory of relativity The controversy between an absolute and a relational conception of motion and its ontological implications are also analyzed **Reuniting the Antipodes -**

Constructive and Nonstandard Views of the Continuum Peter Schuster, Ulrich Berger, Horst Osswald, 2013-03-14 At first glance Robinson's original form of nonstandard analysis appears nonconstructive in essence because it makes a rather unrestricted use of classical logic and set theory and in particular of the axiom of choice Recent developments however have given rise to the hope that the distance between constructive and nonstandard mathematics is actually much smaller than it appears So the time was ripe for the first meeting dedicated simultaneously to both ways of doing mathematics and to the current and future reunion of these seeming opposites Consisting of peer reviewed research and survey articles written on the occasion of such an event this volume offers views of the continuum from various standpoints Including historical and philosophical issues the topics of the contributions range from the foundations the practice and the applications of constructive and nonstandard mathematics to the interplay of these areas and the development of a unified theory

Dynamic Epistemic Logic Hans van Ditmarsch, Wiebe van der Hoek, Barteld Kooi, 2007-05-06 *Dynamic Epistemic Logic* is

the logic of knowledge change This book provides various logics to support such formal specifications including proof systems Concrete examples and epistemic puzzles enliven the exposition The book also offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice *Refined Verisimilitude* S.D. Zwart,2013-11-11 The subject of the present inquiry is the approach to the truth research which started with the publication of Sir Karl Popper s Conjectures and Refutations In the decade before this publication Popper fiercely attacked the ideas of Rudolf Carnap about confirmation and induction and ten years later in the famous tenth chapter of Conjectures he introduced his own ideas about scientific progress and verisimilitude cf the quotation on page 6 Abhorring inductivism for its appreciation of logical weakness rather than strength Popper tried to show that fallibilism could serve the purpose of approach to the truth To substantiate this idea he formalized the common sense intuition about preferences that is B is to be preferred to A if B has more advantages and fewer drawbacks than A In 1974 however David Miller and Pavel Tichy proved that Popper s formal explication could not be used to compare false theories Subsequently many researchers proposed alternatives or tried to improve Popper s original definition Theoretical Knowledge Vyacheslav S. Stepin,2005-11-13 In Theoretical Knowledge an original conception of a structure and dynamics of scientific knowledge is proposed A detailed analysis of the foundations of science performed by the author allowed him to develop new ideas and approaches to demonstrate how sociocultural factors are incorporated in the process of yielding of new theories He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures The investigation is based on the extensive literature on the history of natural and social sciences The reader will find in the book authentic historical reconstructions of the processes of the development of classical and quantum electrodynamics relativity and conceptions of evolution in biology **Structures in Science** Theo A.F. Kuipers,2012-12-06 Although there is an abundance of highly specialized monographs learned collections and general introductions to the philosophy of science only a few 25 years synthetic monographs and advanced textbooks have appeared in the last The philosophy of science seems to have lost its self confidence The main reason for such a loss is that the traditional analytical logical empiricist approaches to the philosophy of science had to make a number of concessions especially in response to the work of Popper Kuhn and Lakatos With Structures

in Science I intend to present both a synthetic monograph and an advanced textbook that accommodates and integrates the insight of these philosophers in what I like to call a neo classical approach The resulting monograph elaborates several important topics from one or more perspectives by distinguishing various kinds of research programs and various ways of explaining and reducing laws and concepts and by summarizing an integrated explication presented in From Instrumentalism to Constructive Realism ICR of the notions of confirmation empirical progress and truth approximation Philosophical Lectures on Probability Bruno de Finetti, 2008-05-01 Bruno de Finetti 1906 1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains *Reference, Truth and Conceptual Schemes* G. Forrai, 2013-03-14 1

HISTORICAL BACKGROUND The purpose of the book is to develop internal realism the metaphysical epistemological doctrine initiated by Hilary Putnam Reason Truth and History Introduction Many Faces In doing so I shall rely sometimes quite heavily on the notion of conceptual scheme I shall use the notion in a somewhat idiosyncratic way which however has some affinities with the ways the notion has been used during its history So I shall start by sketching the history of the notion This will provide some background and it will also give opportunity to raise some of the most important problems I will have to solve in the later chapters The story starts with Kant Kant thought that the world as we know it the world of tables chairs and hippopotami is constituted in part by the human mind His central argument relied on an analysis of space and time and presupposed his famous doctrine that knowledge cannot extend beyond all possible experience It is a central property of experience he claimed that it is structured spatially and temporally However for various reasons space and time cannot be features of the world as it is independently of our experience So he concluded that they must be the forms of human sensibility i e necessary ingredients of the way things appear to our senses **The Dawn of Cognitive Science** L. Albertazzi, 2013-04-17 Current debate in cognitive science from robotics to analysis of vision deals with problems like the perception of form the structure and formation of mental images and their modelling the ecological development of artificial intelligence and cognitive analysis of natural language It focuses in particular on the presence of a hierarchy of intellectual constructions in different formats of representation These diverse approaches which share a common assumption of the inner nature of representation call for a new epistemology even a new psychophysics based on a theory of reference which is intrinsically cognitive As a contribution to contemporary research the reading presents the core of theories developed in Central Europe between the late nineteenth and early twentieth centuries by philosophers physicists psychologists and semanticists who shared a dynamic approach and a pronounced concern with problems of interaction and dependence These

theories offer innovative solutions to some of the epistemological and philosophical problems currently at the centre of debate like part whole theory of relations and conceptual and linguistic categorization **Explanation** Giora Hon, Sam S. Rakover, 2013-04-17 For some years we have been conducting at the University of Haifa an interdisciplinary seminar on explanation in philosophy and psychology We habitually begin the seminar with some philosophical reflections on explanation an analysis of the concept and its metaphysical underpinnings We discuss the various models and proceed to examine explanation in the setting of psychology Thus from the outset we have focused not only on the concept itself but also on its application The objective that we have set for the seminar attended by students from both departments Philosophy and Psychology has been a critical understanding of the concept of explanation its use and limitations We were keen on deepening our understanding of the concept and on exploring its applications in fields of knowledge other than psychology This was the motivation for convening an international conference on explanation and its application The conference took place in the spring of 1998 under the auspices of the University of Haifa The present book is the fruit of this meeting The reader should note that the second part of the Introduction presents a detailed analytical account of the book We hope that this overview will facilitate efficient use of the book by directing the reader's attention to those issues that might be of interest to him or her **Abductive Reasoning** Atocha Aliseda, 2006-02-16 Abductive Reasoning Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning providing logical foundations and a rich sample of pertinent applications Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision Probability Theory Vincent F. Hendricks, Stig Andur Pedersen, Klaus Frovin Jørgensen, 2001-06-30 A collection of papers presented at the conference on Probability Theory Philosophy Recent History and Relations to Science University of Roskilde Denmark September 16 18 1998 Since the measure theoretical definition of probability was proposed by Kolmogorov probability theory has developed into a mature mathematical theory It is today a fruitful field of mathematics that has important applications in philosophy science engineering and many other areas The measure theoretical definition of probability and its axioms however are not without their problems some of them even puzzled Kolmogorov This book sheds light on some recent discussions of the problems in probability theory and their history analysing their philosophical and mathematical significance and the role of mathematical probability theory in other sciences *Brouwer meets Husserl* Mark van Atten, 2006-11-08 Can the straight line be analysed mathematically such that it does not fall apart into a set of discrete points as is usually done but through which its fundamental continuity is lost And are there objects of pure mathematics that can change through time Mathematician and philosopher L E J Brouwer argued that the two questions are closely related and that the answer to both is yes To this end he

introduced a new kind of object into mathematics the choice sequence But other mathematicians and philosophers have been voicing objections to choice sequences from the start This book aims to provide a sound philosophical basis for Brouwer s choice sequences by subjecting them to a phenomenological critique in the style of the later Husserl

The Limits of Logical Empiricism Alfons Keupink, Sanford Shieh, 2006-03-30 Arthur Pap s work played an important role in the development of the analytic tradition This role goes beyond the merely historical fact that Pap s views of dispositional and modal concepts were influential As a sympathetic critic of logical empiricism Pap like Quine saw a deep tension in logical empiricism at its very best in the work of Carnap But Pap s critique of Carnap is quite different from Quine s and represents the discovery of limits beyond which empiricism cannot go where there lies nothing other than intuitive knowledge of logic itself Pap s arguments for this intuitive knowledge anticipate Etchemendy s recent critique of the model theoretic account of logical consequence Pap s work also anticipates prominent developments in the contemporary neo Fregean philosophy of mathematics championed by Wright and Hale Finally Pap s major philosophical preoccupation the concepts of necessity and possibility provides distinctive solutions and perspectives on issues of contemporary concern in the metaphysics of modality In particular Pap s account of modality allows us to see the significance of Kripke s well known arguments on necessity and apriority in a new light
