Gill,2012-12-06 Human centredness A Challenge to Post industrial Europe The key power in industrial society has been linked to the possession of capital and factory In the information society it could be rather different If one accepts that that the key power in the information society will be linked not so much to the ownership of information but to human creativity nourished by that information the productive force of today and tomorrow could be more and more the human brain Making use of one s intelligence is always accompanied by positive emotion which in turn further activates the intelligence But unfortunately under present conditions workers of all levels live in fear anxiety and stress rather than desire and motivation The question of basic human ecology quality of life is therefore a major strategic factor It is precisely the opposite to the mechanisms of exclusion that currently dominate our society exclusion of young people through joblessness but also exclusion through technology as with the helplessness of older people or the poorly educated confronted with ticket dispensing machines or other automats This is not idle theorizing it corresponds to concrete facts It is for example how some observers interpret the crisis at IBM Because its programs were less human friendly it was shaken to its foundations by Apple and Microsof though it seems since to have learnt its lesson **Leading Complex Projects** Kaye

Remington,2016-04-22 Leadership in projects has been under represented in many of the most influential project methodologies where the focus has been on management and process The importance to project success of key roles such as project board member executive sponsor project manager client representative or team leader increases exponentially with the scale and complexity of the project Kaye Remington s **Leading Complex Projects** draws on original empirical research into successful leadership of complex projects including 70 in depth interviews with people across a broad range of industries selected for their roles in guiding complex projects towards successful outcomes The book structured around the major themes from the interviews explains and applies emerging best practice in a coherent and focused way A potent combination of wisdom from leaders in practice and the latest knowledge from many fields of research will engage experienced practitioners as well as those who are teaching and researching projects complexity and leadership **Forks, Phonographs, and Hot Air Balloons** Robert John Weber,1993 How do inventions take shape How did the inventors of the sewing needle the hammer or the wheel find their ideas Are these creations the result of random events or are hidden principles at work Using everyday objects most of us take for granted from forks and Velcro to safety pins and doorknobs noted cognitive psychologist Robert Weber takes a fascinating look at how our world of inventions came into being and how the mind s problem solving abilities gave them the forms they have As an archeologist studies shards of pottery for clues about an ancient culture Weber examines the many forms of inventions from stone knives to genetically engineered mice and finds a rich record of the work of many minds over time a record of human creativity and problem solving handed down through the centuries He offers

various methods for analyzing what mental paths might have been taken by these inventive minds In the test for design for example he ponders how an item would work if various components were shuffled or constructed differently revealing how the optimal shape of the invention was discovered He challenges the reader to engage in thought experiments to explore how the horse drawn cart the waterscrew or the fork might have taken shape over many years through the efforts of successive inventors and adaptors In stripping these simple artifacts to the bone Weber finds a hidden intelligence at work in everyday objects as well as recurrent heuristics basic principles or rules of thumb that are common among many of our most successful inventions heuristics powerful enough to generate endless new ideas Weber ranges across the work of Archimedes Leonardo da Vinci the Wright brothers as well as grade school children who have won national awards for their inventions revealing that the same principles are at work in the discoveries of all of them Basic principles of invention he writes govern how we think solve and manipulate ideas whether mechanical or mental real or mythological Weber's playful original and insightful look at the inventions around us reveals a hidden intelligence in everything from screws to tea bags to synthesizers an intelligence based on principles of creativity and problem solving His fascinating account sheds light on how the mind hones its most original thoughts and products and provides a field guide for how we can tap into our own creativity
