Advances in Lipobiology, Volume 1 R.W. Gross,1996-09-24 Lipobiology is an interdisciplinary field which incorporates critical aspects of lipid and lipoprotein chemistry into the disciplines of cell biology and physiology During the last decade advances in our understanding of the structure and function of lipids biological membranes and lipid derived second messengers have underscored the importance of lipids in the regulation of cellular function This series focuses on salient aspects of the role of lipids in metabolic regulation and cellular activation with emphasis on emerging concepts and technologies One goal of this series is to formulate cohesive criteria upon which a foundation for the evaluation of recent work can be based and future directions of research identified

Transduction Mechanisms in Cellular Signaling Edward A. Dennis,Ralph A. Bradshaw,2011-04-12 Cell signaling which is also often referred to as signal transduction or in more specialized cases transmembrane signaling is the process by which cells communicate with their environment and respond temporally to external cues that they sense there All cells have the capacity to achieve this to some degree albeit with a wide variation in purpose mechanism and response At the same time there is a remarkable degree of similarity over quite a range of species particularly in the eukaryotic kingdom and comparative physiology has been a useful tool in the development of this field The central importance of this general phenomenon sensing of external stimuli by cells has been appreciated for a long time but it has truly become a dominant part of cell and molecular biology research in the past three decades in part because a description of the dynamic responses of cells to external stimuli is in essence a description of the life process itself This approach lies at the core of the developing fields of proteomics and metabolomics and its importance to human and animal health is already plainly evident Provided by publisher
