*In Plain Sight* Alexandra Socarides,2020-02-06 *In Plain Sight* explores how the poetry of nineteenth century American women that was once so visible within American culture could have with the exception of that by Emily Dickinson so thoroughly disappeared from literary history By investigating erasure not merely as something that was done to these women but as the result of the conventions that once made the circulation of their poetry possible in the first place this volume offers the first book length analysis of the conventions of nineteenth century American women s poetry While each of the chapters focuses on a specific convention taken together they tell the complicated story of nineteenth century American women s poetry tracing the spaces within literary culture where it lived and thrived the spaces from which it was always in the process of vanishing By reclaiming these conventions as a constitutive part of nineteenth century American women s poetry this book asks readers to take seriously the work these women produced and the role their work might play in remapping American literary history

**"A New Activity?"** Frank A. Hotblack,1920 **The Dye is Now Cast** United States. National Potrait Gallery,1975 **The Psychology of Economic Decisions** Isabelle Brocas,Juan D. Carrillo,2003 Psychologists and economists often ask similar questions about human behaviour This volume brings together contributions from leaders in both disciplines The editorial introduction discusses methodological differences between the two which have until now limited the development of mutually beneficial lines of research Psychologists have objected to what they see as an excessive formalism in economic modelling and an unrealistic degree of sophistication in the behaviour of individuals while economists criticize the absence of a general psychological framework into which most results can be fitted and the lack of welfare implications in their theories The editors encourage scholars to exploit the strengths of each discipline the ability of psychologists to understand the feelings and motivation of individuals and the experience of economists to develop normative frameworks The editors then highlight the links between the contributions by grouping them according to central themes in the study of rationality and well being

- 1 The causes and consequences of irrational behaviour
- 2 The role of anticipatory feelings and imperfect self knowledge on decision making
- 3 The way in which memory of past events and cost of thinking affect current decisions
- 4 The interaction between anticipated and remembered utility and its effects on the welfare of individuals
- 5 Experimental practice on how to perform controlled experiments to test hypotheses

This exciting volume provides an excellent point of entry for anyone interested in the interface between economics and psychology
