Experimental Techniques in Human Neuropsychology H. Julia Hannay,1986 This unique sourcebook describes the research methods used to study human brain function and brain behavior relationships These range from relatively simple approaches such as dichotic listening and tachistoscopic presentation to computerized techniques such as cerebral blood flow measurements The description of each method covers the underlying theory variations on the basic paradigm dependent measures reliability and validity and the equipment required The authors also critically review research with normal and clinical populations Because of the rapid expansion of the field of human neuropsychology and accompanying technological advances this volume will be valued as much by experienced researchers as by newcomers seeking an introduction to the variety of available procedures

Neuropsychology of Attention Ronald A. Cohen, 2013-12-11 It has been 15 years since the original publication of Neuropsychology of Attention At the time of its publication attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists Yet attention was typically viewed as a nuisance variable a factor that needed to be accounted for when assessing brain function but of limited importance in its own right There is a need for a new edition of this book within Neuropsychology to present an updated and

integrated review of what is known about attention disorders that affect it and approaches to its clinical assessment and treatment. Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain. Current Catalog National Library of Medicine (U.S.), Human Auditory Evoked Potentials Terence W. Picton, 2011. This book reviews how we can record the human brain's response to sounds and how we can use these recordings to assess hearing. These recordings are used in many different clinical situations: the identification of hearing impairment in newborn infants, the detection of tumors on the auditory nerve, the diagnosis of multiple sclerosis. As well, they are used to investigate how the brain is able to hear, how we can attend to particular conversations at a cocktail party and ignore others, how we learn to understand the language we are exposed to, why we have difficulty hearing when we grow old. This book is written by a single author with wide experience in all aspects of these recordings. The content is complete in terms of the essentials. The style is clear, equations are absent, and figures are multiple. The intent of the book is to entertain as much as to teach; allusions are made to fields beyond the ear, and the chapters discuss the importance of the phenomena as well as describing their nature. *Unconscious Memory Representations in Perception* István Czigler, István Winkler, 2010-05-06. Perceptual experience emerges from neural computations. *Unconscious Memory Representations in Perception* focuses on the role of implicit non-conscious memories in processing sensory information. Making sense of the wealth of information arriving at our senses requires implicit memories which represent environmental regularities, contingencies of the sensory input, as well as general contextual knowledge. Recent findings and theories in cognitive and computational neuroscience provided new insights into the structure and contents of implicit memory representations. The chapters of this book examine implicit memories both in relatively simple situations such as perceiving auditory and visual objects as well as in high-level cognitive functions such as speech and music perception and aesthetic experience. By nature, implicit memories cannot be directly studied with behavioral methods. Therefore, a large part of the evidence reviewed was obtained in neuroscientific studies. Readers with limited experience in neuroscience will find information about the most commonly used techniques in the appendix of this volume. Series B
