Longevity and Frailty Fondation IPSEN pour la recherche thérapeutique, 2005-04-26 Understanding the relationship between frailty and longevity becomes increasingly important as the world continues to age and life expectancy in most countries continues to increase The articles contained in this book are the outcome of a colloquium sponsored by Fondation IPSEN in which interdisciplinary perspectives were brought to bear on conceptual empirical and clinical aspects of this relationship The result is a unique innovative and timely blend of papers on topics ranging from frailty concepts in animal models and early Homo sapiens to documentation of progress in morbidity compression on the relationships between frailty and impairments and inflammation and perspectives on long term health care needs in an aging world *The Danish Pension System* Torben M. Andersen, Svend E. Hougaard Jensen, Jesper Rangvid, 2022-07-28 The need for pension reform is widely discussed against the backdrop of falling fertility rates and rising longevity with reference often made to Denmark as a model for pension system reform This book offers an in depth analysis of the Danish pension system its design performance benefit structure investment policies regulation and more *Seasonality in Human Mortality* Roland Rau, 2006-11-24 Seasonal fluctuations in mortality are a persistent phenomenon across populations In Western countries of the Northern hemisphere mortality is typically larger in winter than in summer which is attributed to the detrimental effects of cold to health This does however not explain why in colder countries the differences between winter and summer mortality are smaller than in countries with warm or moderate climate This book therefore investigates whether sociodemographic and socioeconomic factors play a role as important for seasonal mortality as they do for mortality in general Using modern statistical methods the book shows for example for the United States that the fluctuations between winter and summer mortality are smaller the more years someone has spent in school [Visualizing Mortality Dynamics in the Lexis Diagram](#) Roland Rau, Christina Bohk-Ewald, Magdalena M. Muszyńska, James W. Vaupel, 2017-11-14 This book visualizes mortality dynamics in the Lexis diagram While the standard approach of plotting death rates is also covered the focus in this book is on the depiction of rates of mortality improvement over age and time This rather novel approach offers a more intuitive understanding of the underlying dynamics enabling readers to better understand whether period or cohort effects were instrumental for the development of mortality in a particular country Besides maps for single countries the book includes maps on the dynamics of selected causes of death in the United States such as cardiovascular diseases or lung cancer The book also features maps for age specific contributions to the change in life expectancy for cancer survival and for seasonality in mortality for selected causes of death in the United States The book is accompanied by instructions on how to use the freely available R Software to produce these types of surface maps Readers are encouraged to use the presented tools to visualize other demographic data or any event that can be measured by age and calendar time allowing them to adapt the methods to their respective research interests The intended audience is anyone who is interested in visualizing data by age

and calendar time no specialist knowledge is required This book is open access under a CC BY license
