

ZOOPLANKTON ECOLOGY

Evolution and Ecology of Zooplankton Communities, edited by W. Charles Kerfoot. University Press of New England, Hanover, NH, 1980, 793 p., illus., \$45.00 (\$20-50491).

This volume represents the Proceedings of the Third Special Symposium of the American Society of Limnology and Oceanography held at Dartmouth College, 20-25 August 1978. The purpose of the symposium was to provide an atmosphere conducive to reflection and thought on zooplankton interactions with fish and phytoplankton. The symposium also provided a stimulus for synthesis for a field that has shown considerable progress and controversy over the past 10 to 15 years. In reality, the scope is much broader, including, for example, papers on genetics of zooplankton populations and orientation of crustaceans in time and space. The contributors (many from Europe) and themes were apparently chosen and organized to emphasize the diversity of interest and opinion in the developing area of zooplankton ecology and to provide a broad

international coverage with different points of view. Although this work is biased toward freshwater environments, it should be of considerable use to marine workers.

The 66 papers are arranged around 10 general themes from the level of individual behavior through population dynamics to community structure. This allows topics to build on one another and to allow some continuity in a lengthy volume. The introductory paper of chapter 1 by Zaret takes a unique point of view in attempting to describe the effects of physical properties of water (e.g., Reynolds's number) on individual zooplankton behavior. Ringelberg's discussion on "Causal and Teleological Aspects of Diurnal Vertical Migration" provides interesting reading in an area of many conflicting hypotheses. Boran's method for long-term continuous culture of rotifers in the "Rotifer Feeding and Population Dynamics" section will be of use to many of us. Lehman's paper in the "Plant-Herbivore Interaction" section reemphasizes the importance of nutrient regeneration by zooplankton grazing. Among the other exciting

contributions are the demonstration that filter feeding in copepods is not filtering at all but a high speed discrimination manipulation of particles, the recognition that the seasonal populations of rotifers and cladocerans involve seasonal events, and the suggestion that tropical freshwater zooplankton communities are impoverished. Many other interesting papers are to be found in the sections on "Genetics, Demographics and Life Histories of Zooplankton," "Cyclo-morphosis," "Predation, Prey Vulnerability," "Zooplankton Composition," "Spatial and Temporal Aspects of Community Structure," and "Community Structure: Experiment and Theoretic Approach."

In general, the field of zooplankton ecology is well covered with the notable exception of production ecology. The relatively new and continued productive use of scanning electron microscopy and high speed motion pictures for examining morphology and individual behavior is well represented. The scanning electron micrographs (SEM) of the Blades-Youngbluth and Friedman papers provide an exceptional visual review of both male and female morphological structures in the former paper and copepod receptors and oral structures in relation to filterfeeding in the later.

An unfortunate aspect of this volume is the lack of inclusion of the discussion that ensued after each presentation. One stated purpose of the symposium was to organize it in such a manner as to allow "creative ferment, synthesis, and lively debate." Much lively debate did, in fact, take place. In some instances, the discussion was indeed stimulating and provided an opportunity to do some creative thinking with many of the foremost researchers in the field of zooplankton ecology. Unfortunately, this discussion was not preserved in this volume. By at least attempting to include the discussion, as was done in the First Special Symposium of the American Society of Limnology and Oceanography "Nutrients and Eutrophication," some of this creative thought and reflection could have been preserved for nonparticipants in the symposium.

The general appearance of this volume is excellent, and it is remarkably free of typographical errors. Graphs, drawings and photographs are generally of high quality. The organizers of this symposium are to be congratulated for a well conceived and well executed cooperative effort.

This book should be required reading for graduate students as an adjunct to courses or as base material for seminar discussion. It presents new information, both descriptive and experimental. In presenting many new advances in zooplankton research, it often reviews much of the older literature. Zooplankton ecologists, as well as aquatic ecologists in general, will refer to it for years to come.

AGING PLANTS

Senescence in Plants, edited by Kenneth V. Thimann. CRC Press, Inc., Boca Raton, Florida, 1980, 276p., illus., \$59.95.

The first book devoted to senescence in plants was Molisch (1937); the present work is only the second attempt on the subject. Molisch's book pre-dated modern hormone physiology which limited the scope of his analysis, but it provided a thoroughly researched, unified treatment of the subject. The present work encompasses material up to three years ago (early 1978) and is an amalgam of contributions from 13 authors which vary greatly in style (even to the arrangement of references) and quality.

In the opening article on senescence in plant development, Leopold provides a review of his pioneering work in this area but, disappointingly, eschews any attempt to point up relationships with recent work in the molecular biology of development.

In chapters 2 and 3, Osborne deals with biochemical aspects of senescence in seeds and Villiers concentrates on ultrastructural aspects. There is much of interest here although neither author does justice to recent work on membranes in this context, and the photographs of grids and some of the electron micrographs add little.

Chapter 4 is entitled "Senescence in Fungi" and has no apparent relevance in this volume. The phenomena described appear to result from the activities of viruses and plasmids, and it is of interest to note that the 78 references cited do not contain any which relate to senescence processes in green plants.

In chapter 5, Thimann deals with leaf senescence; the unwary reader should be alerted by

the introductory proposition that "with leaves, one can rapidly induce senescence in a number of ways, and there is as yet no reason to think that such induced senescence differs in any way from the natural process." As an antidote to this unwarranted assertion, the reader might consult Thomas and Stoddart (1979); Thimann's "Cellular" and "Organismic" explanations of the mechanisms of senescence, involving stomatal interrelationships and effects on photophosphorylation, though suggestive, require a much more rigorous treatment.

In chapter 6, Frith and Dalling provide a thoughtful assessment of the role of peptide hydrolases in leaf senescence, and it is presumably not their fault that the long period that has obviously elapsed between the completion of their manuscript and the appearance of this volume has weakened the value of their contribution.

Flower senescence is discussed by Mayak and Hadery in a nicely rounded article (chapter 7), and fruit senescence by Rhodes (chapter 8). An odd little contribution on pigment changes in fruits comprises chapter 9; there can surely be no justification for the according of chapter status to a topic such as this when important major aspects of senescence in cytodifferentiation are inexplicably omitted.

In the concluding chapter, Noodin provides a scholarly and well-researched discussion of senescence in the whole plant, which is rendered unnecessarily imposing by the lack of any illustrations. The particular value of this book will be as a work of reference for the specialist.

Evolution and Ecology of Zooplankton Communities W. Charles Kerfoot, American Society of Limnology and Oceanography, 1980 *Evolution and ecology of zooplankton communities*, 1980 **Evolution and Ecology of Zooplankton Communities** American Society Limnological Oceanography Symposium, 1980 Zooplankton Community Analysis W.M. Jr. Lewis, 2012-12-06 This book is based on the premise that the study of ecological communities should be a composite analysis of system properties community structure community energetics and population properties life history patterns adaptive strategies backed by a thorough understanding of the physical chemical environment Too frequently community ecology takes a much narrower focus This may partly be the result of perceived antagonisms between schools of thought in ecology Despite their rather separate origins the multiple theoretical and methodological tools that now exist must be applied synthetically to real communities if the progress of the past two decades is to continue into the next two This book has a case history format which increases the opportunity for detailed analysis although I have attempted to maintain the general perspective of a community ecologist and to draw extensively from the literature whenever it seems profitable to do so The case history data are for Lake Lanao a large tropical lake The main zooplankton data base used in the analysis is entirely original and unpublished although the detailed supporting data on the physical chemical environment and the phytoplankton community have been presented in numerous journal articles and are thus abstracted or used selectively to meet the needs of zooplankton community analysis Evolution and Ecology of Zooplankton Communities W. Lively, 2013-03-11 Evolutionary ecology includes aspects of community structure trophic interactions life history tactics and reproductive modes analyzed from an evolutionary perspective Freshwater environments often impose spatial structure on populations e.g. within large lakes or among habitat patches facilitating genetic and phenotypic divergence Traditionally freshwater systems have featured prominently in ecological research and population biology This book brings together information on diverse freshwater taxa with a mix of critical review synthesis and case studies Using examples from bryozoans rotifers cladocerans molluscs teleosts and others the authors cover current conceptual issues of evolutionary ecology in considerable depth The book can serve as a source of critically evaluated ideas detailed case studies and open problems in the field of evolutionary ecology It is recommended for students and researchers in ecology limnology population biology and evolutionary biology

Zooplankton Petra. H. Lenz, 2021-09-10 Zooplankton is a major work of reference for researchers in plankton biology physiology and behavior which combines behavioral and psychological approaches to the study of plankton on present and interdisciplinary investigation of sensory processes in pelagic environments The breadth of perspective thus achieved provides valuable insights into the larger scale ecological processes of biological productivity community structure and population dynamics Technological advances in almost all aspects of biological research have opened up opportunities for a

re examination of the sensory ecology of planktonic organisms In this wide ranging collection leading researchers in planktonic behavior and physiology address the rapidly developing interface between these two major areas The studies presented range from the laboratory to the field and from the cell to the whole organism but share the common goal of understanding the special sensory world of organisms that live in pelagic environments and how their behavior and physiology relate to it

The Dynamics and Use of Lacustrine Ecosystems V. Ilmavirta, R.I. Jones, 2012-12-06 Limnology is increasingly concerned with water supply and the relation of man to aquatic environments Without the continued availability of pure water all progress in technology and other fields of human life will be to no avail The global problems concerning clear water are already extremely pressing More limnology knowledge is needed to solve these problems The responsibility of man to save water and to take more intensive care of the environment is raised in many of the papers in this book This emphasizes the necessary and unquestionable relevance of limnology to human society Too often the abuse of water usage reflects the neglect of scientific results Limnologists have a responsibility to ensure that administrators understand what is going on The coverage of the book is wide including papers on microbiology to engineering sciences The biology of waters is handled at both species and ecosystem levels The geographical distribution of topics ranges from the tropics to northern temperate areas In fact limnology is increasingly becoming a science which is rightly relevant to everyday life not just an academic subject

FAQs About Evolution And Ecology Of Zooplankton Communities Books

What is a Evolution And Ecology Of Zooplankton Communities PDF? A PDF (Portable Document Format) is a file format developed by Adobe that preserves the layout and formatting of a document, regardless of the software, hardware, or operating system used to view or print it. **How do I create a Evolution And Ecology Of Zooplankton Communities PDF?** There are several ways to create a PDF: Use software like Adobe Acrobat, Microsoft Word, or Google Docs, which often have built-in PDF creation tools. Print to PDF: Many applications and operating systems have a "Print to PDF" option that allows you to save a document as a PDF file instead of printing it on paper. Online converters: There are various online tools that can convert different file types to PDF. **How do I edit a Evolution And Ecology Of Zooplankton Communities PDF?** Editing a PDF can be done with software like Adobe Acrobat, which allows direct editing of text, images, and other elements within the PDF. Some free tools, like PDFescape or Smallpdf, also offer basic editing capabilities. **How do I convert a Evolution And Ecology Of Zooplankton Communities PDF to another file format?** There are multiple ways to convert a PDF to another format: Use online converters like Smallpdf, Zamzar, or Adobe Acrobats export feature to convert PDFs to formats like Word, Excel, JPEG, etc. Software like Adobe Acrobat, Microsoft Word, or other PDF editors may have options to export or save PDFs in different formats. **How do I password-protect a Evolution And Ecology Of Zooplankton Communities PDF?** Most PDF editing software allows you to add password protection. In Adobe Acrobat, for instance, you can go to "File" -> "Properties" -> "Security" to set a password to restrict access or editing capabilities. Are there any free alternatives to Adobe Acrobat for working with PDFs? Yes, there are many free alternatives for working with PDFs, such as: LibreOffice: Offers PDF editing features. PDFsam: Allows splitting, merging, and editing PDFs. Foxit Reader: Provides basic PDF viewing and editing capabilities. How do I compress a PDF file? You can use online tools like Smallpdf, ILovePDF, or desktop software like Adobe Acrobat to compress PDF files without significant quality loss. Compression reduces the file size, making it easier to share and download. Can I fill out forms in a PDF file? Yes, most PDF viewers/editors like Adobe Acrobat, Preview (on Mac), or various online tools allow you to fill out forms in PDF files by selecting text fields and entering information. Are there any restrictions when working with PDFs? Some PDFs might have restrictions set by their creator, such as password protection, editing restrictions, or print restrictions. Breaking these restrictions might require specific

software or tools, which may or may not be legal depending on the circumstances and local laws.
