The Theosophical Quarterly, 1906 The Scientific Monthly, 1919 **Intellectual History in America** Cushing Strout, 1968 **A New Light of Mysticism. Azoth, Or The Star in the East ...** Arthur Edward Waite, 1893 The Athenaeum, 1898 New-Church Messenger, 1921 The Evolution of the Connecticut State School System Orwin Bradford Griffin, 1928 Unifying Biology Vassiliki Betty Smocovitis, 1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close

attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history *The Evolving Brain* R. Grant Steen, 2010-06-28 The human brain is arguably the most complex object in the universe With about 100 billion neurons each of which makes perhaps 10 000 synapses our incredible central processing unit is capable of roughly 1 000 trillion interconnections What do scientists know about how this amazingly complex organ functions Is it even possible to unravel all of its mysteries In this comprehensive book on the science of the brain distinguished neurophysiologist R Grant Steen provides us with a crash course on how the brain works As a researcher on the forefront of brain studies Dr Steen explores the latest findings on a host of topics Consciousness unconsciousness and brain death Learning memory and role of genes Motivation aggression and the range of emotions The plasticity of the growing brain Mental illness and treatment He also delves into such stimulating questions as Where does creativity come from What is personality Can we distinguish between the brain and the mind Impressive in breadth and depth yet written with clarity in an engaging nontechnical style this fascinating tour of the brain provides the general reader with the latest information on one of the most intriguing and burgeoning areas of scientific research No topic has more meaning or relevance than using our brains to understand the working of our own minds R Grant Steen Ph D Chapel Hill NC is a neurophysiologist and associate professor of psychiatry at the University of North Carolina School of Medicine Chapel Hill He has authored or edited four books including the highly acclaimed *DNA Destiny Nature and Nurture in Human Behavior* in addition to nearly seventy research papers
