Di Caro, René Doursat, Andries P. Engelbrecht, Dario Floreano, Luca Maria Gambardella, Roderich Groß, Erol Sahin, Thomas Stützle, Hiroki Sayama, 2010-09-02 These proceedings contain the papers

presented at ANTS 2010 the 7th International Conference on Swarm Intelligence organized by IRIDIA CoDE Université Libre de Bruxelles Brussels Belgium during September 8-10 2010 The ANTS series started in 1998 with the First International Workshop on Ant Colony Optimization ANTS 1998 which attracted more than 50 participants Since then ANTS which is held bi-annually has gradually become an international forum for researchers in the wider field of swarm intelligence In the past since 2004 this development has been acknowledged by the inclusion of the term Swarm Intelligence next to Ant Colony Optimization in the conference title This year's ANTS conference was officially devoted to the field of swarm intelligence as a whole without any bias towards specific research directions As a result the title of the conference was changed to The International Conference on Swarm Intelligence This name change is already in place this year and future ANTS conferences will continue to use the new title This volume contains the best papers selected out of 99 submissions Of these 28 were accepted as full length papers while 27 were accepted as short papers This corresponds to an overall acceptance rate of 56% Also included in this volume are 14 extended abstracts Of the full length papers 15 were selected for oral presentation at the conference All other contributions including short papers and extended abstracts were presented in the form of poster presentations Following the conference the journal Swarm Intelligence will publish extended versions of some of the best papers presented at the conference

Simpson, 2000-09-29 Treating the market economy as a complex adaptive system offers a better explanation of how it works than does the mechanical analogy of neoclassical equilibrium theory The nonlinear interactions of millions of individual human beings coupled with the influence of chance result in the emergence of markets Other regularities emerge in the patterns of economic growth business cycles and in the spatial locations of economic activity Rethinking Economic Behaviour demonstrates the implication of complexity theory for business and government decision making and concludes with an assessment of the future evolution of the market economy Progress in Artificial Intelligence Fernando Moura Pires, 2003-11-24 This book constitutes the refereed proceedings of the 11th Portuguese Conference on Artificial Intelligence EPIA 2003 held in Beja Portugal in December 2003 The 29 revised full papers and 20 revised short papers presented were carefully reviewed and selected from a total of 119 submissions In accordance with the five constituting workshops the papers are organized in topical sections on artificial life and evolutionary algorithms constraint and logic programming systems extraction of knowledge from databases multi agent systems and AI for the Internet and natural language processing and text retrieval Machine Learning and Its Applications Georgios Paliouras, Vangelis Karkaletsis, Constantine D. Spyropoulos, 2003-06-29 In recent years machine learning has made its way from artificial intelligence into areas of administration commerce and industry Data mining is perhaps the most widely known demonstration of this migration complemented by less publicized applications of machine learning like adaptive systems in industry financial prediction medical diagnosis and the construction of user profiles for Web browsers This book presents the capabilities of machine learning methods and ideas on how these methods could be used to solve real world problems The first ten chapters assess the current state of the art of machine learning from symbolic concept learning and conceptual clustering to case based reasoning neural networks and genetic algorithms The second part introduces the reader to innovative applications of ML techniques in fields such as data mining knowledge discovery human language technology user modeling data analysis discovery science agent technology finance etc **Artificial Intelligence and Creativity** T. Dartnall, 2013-04-17 Creativity is one of the least understood aspects of intelligence and is often seen as intuitive and not susceptible to rational enquiry Recently however there has been a resurgence of interest in the area principally in artificial intelligence and cognitive science but also in psychology philosophy computer science logic mathematics sociology and architecture and design This volume brings this work together and provides an overview of this rapidly developing field It addresses a range of issues Can computers be creative Can they help us to understand human creativity How can artificial intelligence AI enhance human creativity How in particular can it contribute to the sciences of the artificial such as design Does the new wave of AI

connectionism geneticism and artificial life offer more promise in these areas than classical symbol handling AI What would the implications be for AI and cognitive science if computers could not be creative These issues are explored in five interrelated parts each of which is introduced and explained by a leading figure in the field Prologue Margaret Boden Part I Foundational Issues Terry Dartnall Part II Creativity and Cognition Graeme S Halford and Robert Levinson Part III Creativity and Connectionism Chris Thornton Part IV Creativity and Design John Gero Part V Human Creativity Enhancement Ernest Edmonds Epilogue Douglas Hofstadter For researchers in AI cognitive science computer science philosophy psychology mathematics logic sociology and architecture and design and anyone interested in the rapidly growing field of artificial intelligence and creativity
