## **Evolution Of Life Histories Of Mammals:**

**Evolution of Life Histories of Mammals** Mark S. Boyce, 1988 Mammals range in body size from the gigantic blue whale to the tiny Etruscan shrew Elephants and man may live for nearly one hundred years while most shrews die before they are three months old During the past decade mammalogists and evolutionary biologists have begun to unravel the numerous factors that shape the enormous diversity of mammal life histories In this volume the authors provide a variety of perspectives on the newest theories in this active field of study The principle uniting all studies of life history evolution is adaptation by natural selection The first chapters in the book discuss this topic offering evolutionary interpretations of geographic variation in mammal life histories explaining how natural selection operates in fluctuating environments introducing evolutionary predictions of demographic mathematics and integrating life histories with behavioral ecology The next chapters offer functional interpretations of the importance of body size in the life history Next several essays explain how developments in quantitative genetics have enabled us to distinguish between genetic and environmental components of variation within and between species With this as a basis the chapters that follow draw from principles of natural selection allometry and genetics to interpret differences among species of mammals The book concludes with speculations on various areas where research seems most urgent for the development of a comprehensive understanding of mammal life history evolution According to the authors the field is rich with questions and opportunities abound for both theoretical and empirical research

**Primate Life Histories and Socioecology** Peter M. Kappeler, Michael E. Pereira, 2003-02 We know a great deal about roles the environment plays in shaping survival reproductive success and even social systems among primates But how do primate life histories affect social systems and vice versa Do baboons patterns of growth for example help to structure their societies Does fission fusion sociality interact with predator pressure to influence the timing of maturation in chimpanzees Exploring these issues and many others the contributors to Primate Life Histories and Socioecology provide the first systematic attempt to understand relationships among primate life histories ecology and social behavior conjointly Topics covered include how primate life histories interact with rates of evolution predator pressure and diverse social structures how the slow maturation of primates affects the behavior of both young and adult caregivers and reciprocal relationships between large brains and increased social and behavioral complexity The first collection of its kind this book will interest a wide range of researchers from anthropologists and evolutionary biologists to psychologists and ecologists Contributors Paul Michael Agapow Susan C Alberts Jeanne Altmann Robert A Barton Nicholas G Blurton Jones Robert O Deaner Robin I M Dunbar J rg U Ganzhorn Laurie R Godfrey Kristen Hawkes Nick J B Isaac Charles H Janson Kate E Jones William L Jungers Peter M Kappeler Susanne Klaus Phyllis C Lee Steven R Leigh Robert D Martin James F O Connell Sylvia Ortmann Michael E Pereira Andy Purvis Caroline Ross Karen E Samonds Jutta Schmid Stephen C Stearns Michael R Sutherland Carel P van Schaik and Andrea J Webster

**Evolution Of Life Histories** Derek Roff, 1993-05-31 There are

many different types of organisms in the world they differ in size physiology appearance and life history The challenge for evolutionary biology is to explain how such diversity arises The Evolution of Life Histories does this by showing that natural selection is the principal underlying force molding life history variation The book describes in particular the ways in which variation can be analyzed and predicted It covers both the genetic and optimization approaches to life history analysis and gives an overview of the general framework of life history theory and the mathematical tools by which predictions can be made and tested Factors affecting the age schedule of birth and death and the costs of reproduction are discussed The Evolution of Life Histories concentrates on those theoretical developments that have been tested experimentally It will interest both students and professionals in evolution evolutionary ecology mathematical and theoretical biology and zoology and entomology

**Outlines for Studies of Mammalian Life Histories** Walter Penn Taylor, 1930 Life history data of wild mammals are essential to a proper understanding of the structure and classification of the mammal they are a prerequisite to a determination of the factors controlling distribution and they are of practical importance in problems of acclimatization and domestication The improvement of agriculture depends to a large extent on a better and more scientific understanding of the relation of plants and animals to their surroundings Effective conservation of the beneficial and the control of the harmful kinds of mammals depend on adequate knowledge of their habits

Creatures of the Dark L. Alterman, Gerald A. Doyle, M.K. Izard, 2013-03-09 The papers in this volume are representative of those presented at a conference entitled Creatures of the Dark The Nocturnal Prosimians held at Duke University June 9 12 1993 The purpose of the conference attended by more than 100 scientists was to assemble for the first time ever scholars from diverse fields with a common interest in the nocturnal prosimian primates The history of the precursors of this meeting are outlined in the Historical Perspective by Doyle this volume Most of the invited papers are presented here in modified form as are several papers originally presented as posters Two papers are included that were not presented due to scheduling conflicts and health considerations Some papers delivered from the podium are not included in this volume Interactions among conference participants resulted in many revisions to the contributions as did the comments of reviewers and the editors Several papers which contained new data or new interpretations of familiar phenomena met with constructive criticism resulting in modification of the original papers We thank all of the contributors for their patience and cooperation and commend the numerous reviewers who generously donated their time and expertise We greatly appreciate funding from the National Institutes of Health the Wenner Gren Foundation for Anthropological Research the Duke University Center for International Studies the Duke University Primate Center and Drs Charles Putman of Duke University and Malcolm Gillis currently of Rice University

**Alternative Life-History Styles of Animals** Michael N. Bruton, 2012-12-06 *Advanced Ecological Theory*

J. McGlade,2009-04-01 Advanced Ecological Theory is intended for both postgraduate students and professional researchers in ecology It provides an overview of current advances in the field as well as closely related areas in evolution ecological economics and natural resource management familiarizing the reader with the mathematical computational and statistical approaches used in these different areas The book has an exciting set of diverse contributions written by leading authorities

Encyclopedia of Evolutionary Biology ,2016-04-14 Encyclopedia of Evolutionary Biology Four Volume Set is the definitive go to reference in the field of evolutionary biology It provides a fully comprehensive review of the field in an easy to search structure Under the collective leadership of fifteen distinguished section editors it is comprised of articles written by leading experts in the field providing a full review of the current status of each topic The articles are up to date and fully illustrated with in text references that allow readers to easily access primary literature While all entries are authoritative and valuable to those with advanced understanding of evolutionary biology they are also intended to be accessible to both advanced undergraduate and graduate students Broad topics include the history of evolutionary biology population genetics quantitative genetics speciation life history evolution evolution of sex and mating systems evolutionary biogeography evolutionary developmental biology molecular and genome evolution coevolution phylogenetic methods microbial evolution diversification of plants and fungi diversification of animals and applied evolution Presents fully comprehensive content allowing easy access to fundamental information and links to primary research Contains concise articles by leading experts in the field that ensures current coverage of each topic Provides ancillary learning tools like tables illustrations and multimedia features to assist with the comprehension process

#### **Outlines for Study of Mammalian Ecology and Life Histories**

Walter Penn Taylor,1948 **Encyclopedia of Biomedical Gerontology** ,2019-11-20 Encyclopedia of Biomedical Gerontology Three Volume Set presents a wide range of topics ranging from what happens in the body during aging the reasons and mechanisms relating to those age related changes and their clinical psychological and social modulators and determinants The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age biological mechanisms of aging age related changes in biological systems human age related diseases the biomedical practicality and impracticality of interventions and finally the ethics of intervention Provides a one stop resource to information written by world leading scholars in the field of biomedical gerontology Fills a critical gap of information in a field that has seen significant progress in the last 10 years

**Human Success** Hugh Desmond,Grant Ramsey,2023 What does it mean for our species or for any species to be successful Human Success Evolutionary Origins and Ethical Implications examines the concept of human success from a variety of disciplinary perspectives with contributions from leading paleobiologists anthropologists geologists philosophers of science and ethicists It tells the tale of how the human species grew in success linked metrics such as population size and geographical range and how it came to dominate ecological systems across the globe It explores how culture technology and creativity have contributed to human success

However there is a darker side of human success as has become apparent in a world affected by climate change and the destruction of biodiversity This leads us to ask whether the human species can really be called successful and what our future success will look like in terms of our bodies minds morals and our place in the universe The essays in this book probe us to reflect on what has led to our apparent evolutionary success and most importantly what this success implies for the future of our species

Marsupial and Placental Mammal Species in Environmental Risk Assessment Strategies Marcelo L Larramendy,Guillermo Eli Liwszyc,2022-06-24 With the expansion of human settlements and the environmental changes brought on by human activity and pollutants toxicology and risk assessment of mammal species is becoming increasingly of interest to toxicologists involved in environmental research This book focuses specifically on environmental risk assessment in marsupial and placental mammals Marsupial ecotoxicology is poorly understood in scientific research and as such environmental risk assessment in marsupials is an area of rapidly growing interest This book will be an ideal companion to toxicologists and ecologists interested in risk assessment in the environments of mammals Particularly those with an interest in the impact introduced by human activity The book will also be of interest to those working in conservation biology biological invasion biocontrol and habitat management

**Mammal Societies** Tim Clutton-Brock,2016-04-20 The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists ecologists and anthropologists It adopts a coherent structure that deals initially with the characteristics and strategies of females before covering those of males cooperative societies and hominid societies It reviews our current understanding both of the structure of societies and of the strategies of individuals it combines coverage of relevant areas of theory with coverage of interspecific comparisons intraspecific comparisons and experiments it explores both evolutionary causes of different traits and their ecological consequences and it integrates research on different groups of mammals with research on primates and humans and attempts to put research on human societies into a broader perspective

*Bat Ecology* Thomas H. Kunz,M. Brock Fenton,2005 In recent years researchers have discovered that bats play key roles in many ecosystems as insect predators seed dispersers and pollinators Bats also display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics including food webs biogeography and emerging diseases In *Bat Ecology* world renowned bat scholars present an up to date comprehensive and authoritative review of this ongoing research The first part of the book covers the life history and behavioral ecology of bats from migration to sperm competition and natural selection The next section focuses on functional ecology including ecomorphology feeding and physiology In the third section contributors explore macroecological issues such as the evolution of ecological diversity range size and infectious diseases including rabies in bats A final chapter discusses conservation challenges facing these fascinating flying mammals *Bat Ecology* is the most comprehensive state of the field collection for scientists and researchers Contributors John D Altringham Robert M R Barclay Tenley M Conway Elizabeth R Dumont Peggy
