Race, Monogamy, and Other Lies They Told You, Second Edition Agustín Fuentes,2022-05-10 A compelling takedown of prevailing myths about human behavior updated and expanded to meet the current moment There are three major myths of human nature humans are divided into biological races humans are naturally aggressive and men and women are wholly different in behavior desires and wiring Race Monogamy and Other Lies They Told You counters these pervasive and pernicious myths about human behavior Agust n Fuentes tackles misconceptions about what race aggression and sex really mean for humans and incorporates an accessible understanding of culture genetics and evolution that requires us to dispose of notions of nature or nurture Presenting scientific evidence from diverse fields including anthropology biology and

psychology Fuentes devises a myth busting toolkit to dismantle persistent fallacies about the validity of biological races the innateness of aggression and violence and the nature of monogamy sex and gender This revised and expanded edition provides up to date references data and analyses and addresses new topics including the popularity of home DNA testing kits and the lies behind incel culture the resurgence of racist nativist thinking and the internet s influence in promoting bad science and a broader understanding of the diversity of sex and gender

Sexual Selection and the Descent of Man Bernard Campbell, 2017-07-12 Just over one hundred and thirty years ago Charles Darwin in *The Descent of Man and Selection in Relation to Sex* 1871 developed remarkably accurate conclusions about man s ancestry based on a review of general comparative anatomy and psychology in which he regarded sexual selection as a necessary part of the evolutionary process But the attention of biologists turned to the more general concept of natural selection in which sexual selection plays a complex role that has been little understood This volume significantly broadens the scope of modern evolutionary biology by looking at this important and long neglected concept of great importance In this book which is the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on the subject The distinguished authors consider many aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research The result is a remarkably original and well rounded view of the whole concept that will be invaluable especially to students of evolution and human sexual behavior The lucid authority of the contributors and the importance of the topic will interest all who share in man s perennial fascination with his own history The book will be of central importance to a wide variety of professionals including biologists anthropologists and geneticists It will be an invaluable supplementary text for courses in vertebrate biology theory of evolution genetics and physical anthropology It is especially important with the emergence of alternative explanations of human development under the rubric of creationism and doctrines of intelligent design

Debating Humankind's Place in Nature, 1860-2000 Richard G. Delisle, 2015-07-14 This text the only one of its kind on the market surveys the development of the field of human evolution from its inception through today It provides students with a broad contrast enabling them to fully understand the value and role of current paleoanthropological research Features An historical approach Establishes for students the nature of paleoanthropology through the historical development of the field from 1860 through 2000 and shows students that paleoanthropology is a remarkably progressive field A focus on the debates in the field of human evolution especially the phylogenetic or genealogical debates Analyzes four distinct debates presented separately from their inception to the present

- 1 Humankind s place among the primates
- 2 The place of the australopithecines relative to the human line
- 3 Debates on human phylogeny proper
- 4 Proposed scenarios of hominization

Presentation and analysis of the viewpoints of over 150 scholars Gives students a valuable reference work for the future includes over 1200 references in the bibliography as well as a comprehensive text for today For junior senior courses in Human Evolution and Paleoanthropology in Anthropology

departments *A Subject Index of Modern Works Added to the Library of the British Museum in the Years 1880-[95]: Works added to the library ... 1880-1885* British Museum. Department of Printed Books,1886 Evolutionary and Neurocognitive Approaches to Aesthetics, Creativity and the Arts Colin Martindale,Paul Locher,Vladimir M Petrov,Arnold

Berleant,2019-06-04 In this book well known scholars describe new and exciting approaches to aesthetics creativity and psychology of the arts approaching these topics from a point of view that is biological or related to biology and answering new questions with new methods and theories All known societies produce and enjoy arts such as literature music and visual decoration or depiction Judging from prehistoric archaeological evidence this arose very early in human development Furthermore Darwin was explicit in attributing aesthetic sensitivity to lower animals These considerations lead us to wonder whether the arts might not be evolutionarily based Although such an evolutionary basis is not obvious on the face of it the idea has recently elicited considerable attention The book begins with a consideration of ten theories on the evolutionary function of specific arts such as music and literature The theory of evolution was first drawn up in biology but evolution is not confined to biology genuinely evolutionary theories of sociocultural change can be formulated That they need to be formulated is shown in several chapters that discuss regular trends in literature and scientific writings Psychologists have recently rediscovered the obvious fact that thought and perception occur in the brain so cognitive science moves ever closer to neuroscience Several chapters give overviews of neurocognitive and neural network approaches to creativity and aesthetic appreciation The book concludes with two exciting describing brain scan research on what happens in the brain during creativity and presenting a close examination of the relationship between genetically transmitted mental disorder and creativity **Anthropology** Raymond Scupin,Christopher R. DeCorse,2019-12-20 Integrating historical biological archaeological and applied approaches with ethnographic data from around the world Anthropology A Global Perspective is founded on four essential themes the diversity of human societies the similarities that tie all humans together the interconnections between the sciences and humanities and a new theme addressing psychological essentialism

Catalogue of the Reference Library Birmingham Free Libraries. Reference Department,John Davis Mullins,1890

The New York Times Index ,1925 **Studying Human Origins** Raymond Corbey,Wil Roebroeks,2001 This history of human origin studies covers a wide range of disciplines This important new study analyses a number of key episodes from palaeolithic archaeology palaeoanthropology primatology and evolutionary theory in terms of various ideas on how one should go about such reconstructions and what if any the uses of such historiographical exercises can be for current research in these disciplines Their carefully argued point is that studying the history of palaeoanthropological thinking about the past can enhance the quality of current research on human origins The main issues in the present volume are the uses of disciplinary history in terms of present day research concerns the relative weight of cultural and other external contexts and continuity and change in theoretical perspectives The book s overall approach is an epistemological one It does not in other

words primarily address anthropological data as such but our ways of handling such data in terms of our most fundamental but usually quite implicit theoretical presuppositions *Looking for a Few Good Males* Erika L. Milam, 2010-03-15 2010

Outstanding Academic Title Choice Magazine Why do female animals select certain mates and how do scientists determine the answer In considering these questions Erika Lorraine Milam explores the fascinating patterns of experiment and interpretation that emerged as twentieth century researchers studied sexual selection and female choice Approaching the topic from both biological and animal studies perspectives Milam not only presents a broad history of sexual selection from Darwin to sociobiology but also analyzes the animal human continuum from the perspectives of sex evolution and behavior She asks how social and cultural assumptions influence human animal research and wonders about the implications of gender on scientific outcomes Although female choice appears to be a straightforward theoretical concept the study of sexual selection has been anything but simple Scientists in the early twentieth century investigated female choice in animals but did so with human social and sexual behavior as their ultimate objective By the 1940s evolutionary biologists and population geneticists shifted their focus studying instead how evolution affected natural animal populations Two decades later organismal biologists once again redefined the investigation of sexual selection as sociobiology came to dominate the discipline Outlining the ever changing history of this field of study Milam uncovers lost mid century research programs and finds that the discipline did not languish in the decades between Darwin s theory of sexual selection and sociobiology as observers commonly believed Rather population geneticists ethologists and organismal biologists alike continued to investigate this important theory throughout the twentieth century *Reading Human Nature* Joseph Carroll, 2011-03-01

As the founder and leading practitioner of literary Darwinism Joseph Carroll remains at the forefront of a major movement in literary studies Signaling key new developments in this approach *Reading Human Nature* contains trenchant theoretical essays innovative empirical research sweeping surveys of intellectual history and sophisticated interpretations of specific literary works including *The Picture of Dorian Gray* *Wuthering Heights* *The Mayor of Casterbridge* and *Hamlet* Evolutionists in the social sciences have succeeded in delineating basic motives but have given far too little attention to the imagination Carroll makes a compelling case that literary Darwinism is not just another school or movement in literary theory It is the moving force in a fundamental paradigm change in the humanities a revolution Psychologists and anthropologists have provided massive evidence that human motives and emotions are rooted in human biology Since motives and emotions enter into all the products of a human imagination humanists now urgently need to assimilate a modern scientific understanding of human nature Integrating evolutionary social science with literary humanism Carroll offers a more complete and adequate understanding of human nature *Annals of Eugenics* ,1925 **Cincinnati Public Library** ,1884
