we do not fully understand at what stage of the evolution of living matter the first traces of defense reactions occurred We even do not fully understand how and why immune systems reached their contemporary state in advanced vertebrates and man It may be expected that in the near future these questions will be answered by comparative and developmental biology Together with an extraordinary explosion of our knowledge about immunity of mammals including man an increase in the interests concerning origin and development of immune mechanisms at lower stages of the phylogeny can be observed The search for simple types of immune mechanisms in less complex but still evolutionary successful animals is promising and may contribute to better understanding of highly complex immune adaptive responses in mammals It is important to note that comparative and evolutionary immunology differs greatly from other branches of biomedical science Apart from immunology and molecular biology a specialist in this discipline has to be familiar with every detail of taxonomy comparative anatomy physiology embryology and even with the phyletic relationships of animals Probably no monography could deal with the entire animal kingdom because in many cases the insights into questions about immune mechanisms of many animal groupings or phyla and their possible evolutionary implications are unknown or just now beginning to take shape For the moment our knowledge on such matters relies upon reconstructions of ideas that we have deduced from studies on members of relative taxa

**The Ecology and Evolution of Inducible Defenses** Ralph Tollrian, C. Drew Harvell, 2021-04-13 Inducible defenses those often dramatic phenotypic shifts in prey activated by biological agents ranging from predators to pathogens are widespread in the natural world Yet research on

the inducible defenses used by vertebrates invertebrates and plants in terrestrial marine and freshwater habitats has largely developed along independent lines Ralph Tollrian and Drew Harvell seek to change that here By bringing together leading researchers from all fields to review common themes and explore emerging ideas this book represents the most current and comprehensive survey of knowledge about the ecology and evolution of inducible defenses Contributors examine organisms as different as unicellular algae and higher vertebrates and consider defenses ranging from immune systems to protective changes in morphology behavior chemistry and life history The authors of the review chapters case studies and theoretical studies pinpoint unifying factors favoring the evolution of inducible defenses Throughout the volume emphasizes a multidisciplinary approach integrating applied and theoretical ecology evolution genetics and chemistry In addition Harvell and Tollrian provide an introduction and a conclusion that review the current state of knowledge in the field and identify areas for future research The contributors in addition to the editors are May Berenbaum Arthur Zangerl Johannes J. Remo Juha Tuomi Patric Nilsson Anurag Agrawal Richard Karban Marcel Dicke Ellen Van Donk Miquel L. **Evolution of Immune Reactions** Petr Sima, Vaclav Vetvicka, 1990-08-27 This book on phylogeny and immunity reconstructs the history and evolutionary pathways of immunity among the various forms of life The authors argue that the immunity could have evolved different adequately successful patterns in the animal sub regnum which are strictly determined by the morpho physiological possibilities of the animals They state that the vertebrate type of immunity evolved only in the chordate branch The publication devotes special attention to the arthropods and molluscs as they have attracted more investigative efforts than any other invertebrate taxa The authors selected Agnatha Chondrichthyes and Osteichthyes from the vertebrate taxa in order to show where and how the morphofunctional basis of the truly adaptive immunity of the endothermic tetrapods gradually evolved Each chapter gives the description of the origin and interrelationships of the representatives of the taxon in question Also given are the main biological morphological non morphological and immune attributes Emphasized throughout the book is the central idea that immunological reactions are a part of the overall biological phenomena and should be studied only from this aspect The authors express that the fields of comparative and evolutionary immunology will provide inspiration for further investigations in biomedicine in the near future

Molecular Approaches to Ecology and Evolution R. deSalle, B. Schierwater, 2012-12-06 Four years ago we edited a volume of 36 papers entitled Molecular Approaches to Ecology and Evolution Schierwater et al 1994 in which we attempted to put together a diverse array of papers that demonstrated the impact that the technological revolution of molecular biology has had on the field of evolutionary biology and ecology The present volume borrows from that theme but attempts to focus more sharply on the impact that molecular biology has had on our understanding of different

hierarchical levels important in evolutionary and ecological studies Because DNA sequence variation is at the heart of every paper in the present volume we feel it necessary to examine how DNA has affected study at various levels of biological organization The majority of the chapters in the present volume follow themes established in the earlier volume all chapters by authors in the previous volume are either fully updated or entirely new and expand into areas that we felt were important for a more complete understanding of the impact of DNA technology on ecology and evolution The collection of papers in this volume cover a diverse array of ecological and evolutionary questions and demonstrates the breadth of coverage molecular technology has imparted on modern evolutionary biology There are also a broad range of hierarchical questions approached by the 17 papers in this volume

**Ancestral Landscapes in Human Evolution: Culture, Childrearing and Social Wellbeing** Darcia Narvaez, Kristin Valentino, Agustín Fuentes, James J. McKenna, Peter Gray, 2014-02-21 The social contexts in which children develop have transformed over recent decades but also over millennia Modern parenting practices have diverged greatly from ancestral practices which included natural childbirth extensive and on demand breastfeeding constant touch responsiveness to the needs of the child free play in nature with multiple aged playmates and multiple adult caregivers Only recently have scientists begun to document the outcomes for the presence or absence of such parenting practices but early results indicate that psychological wellbeing is impacted by these factors Ancestral Landscapes in Human Evolution addresses how a shift in the way we parent can influence child outcomes It examines evolved contexts for mammalian development optimal and suboptimal contexts for human evolved needs and the effects on children's development and human wellbeing Bringing together an interdisciplinary set of renowned contributors this volume examines how different parenting styles and cultural personality influence one another Chapters discuss the nature of childrearing social relationships the range of personalities people exhibit the social and moral skills expected of adults and what wellbeing looks like As a solid knowledge base regarding normal development is considered integral to understanding psychopathology this volume also focuses on the effects of early childhood maltreatment By increasing our understanding of basic mammalian emotional and motivational needs in contexts representative of our ancestral conditions we may be in a better position to facilitate changes in social structures and systems that better support optimal human development This book will be a unique resource for researchers and students in psychology anthropology and psychiatry as well as professionals in public health social work clinical psychology and early care and education

**Somatoform Dissociation** Ellert R. S. Nijenhuis, 2004 The first comprehensive theory of somatoform dissociation Expanding the definition of dissociation in psychiatry Nijenhuis presents a summary of the somatoform components of dissociation how sensory and motor functions are affected by dissociative disorders Founded in the current view of mind body integration this book is essential reading for all mental health professionals engaged in the diagnosis treatment and study of dissociative disorders PTSD and other trauma related psychiatric disorders

**Immunology of Annelids** Martin Bilej, Edwin L. Cooper, P.

Roch,1993-12-16 Immunology of Annelids provides a state of the art review of the biological and biochemical processes involved in defense reactions of annelids The book covers phylogeny taxonomy and fundamental body structure to provide basic information essential to developing a full understanding of the defense system of an organism Physiological aspects of the relationship between the immune systems and cells and their limitations are discussed in detail and the role of cells in cellular defense transplantation and humoral defenses is explained The importance of annelids and their defense reaction from the phylogenetic standpoint is examined in a chapter comparing vertebrate and invertebrate defense strategies Immunology of Annelids is a practical reference for cell biologists immunologists evolutionary and developmental biologists and other researchers who need insight into the development and hierarchy of immune reactions A.M.A. Archives of Neurology and Psychiatry ,1920 **Archives of Neurology and Psychiatry** ,1919 **Advances in Motivation Science** ,2025-06-16 Advances in Motivation Science Volume Twelve the latest release in the Motivation Science series contains interesting articles that cover topics such as Advances and Challenges in Work Motivation A Whole Person Perspective Integrating Two Separate Research Traditions The Conscientiousness Interest Compensation CONIC Model The Drive to Escape Uncovering the Motivational Dynamics of Suicide Related Cognitive Accessibility in Everyday Life and Cue Based Behavior A Pavlovian Instrumental Transfer Approach to Automatic Goal Pursuit Presents new research in the field of motivation science and research Provides a timely overview of important research programs conducted by the most respected scholars in psychology Gives special attention to directions for future research **Transposable Elements and Genome Evolution** J. F. McDonald,2012-12-06 Once considered merely selfish or parasitic DNA transposable elements are today recognized as being of major biological significance Not only are these elements a major source of mutation they have contributed both directly and indirectly to the evolution of genome structure and function On October 8 10 1999 100 molecular biologists and evolutionists representing 11 countries met on the campus of The University of Georgia in Athens for the inaugural Georgia Genetics Symposium The topics of presentations ranged from how the elements themselves have evolved to the impact transposable elements have had on the evolution of their host genomes The papers in this volume therefore represent state of the art thinking by leading world experts in the field on the evolutionary significance of transposable elements *The origin and evolution of life on the theory of action, reaction* Henry Fairfield Osborn,1917

**Ageing and COVID-19** Maria Łuszczńska,Marvin Formosa,2021-11-29 The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license This volume presents a range of research approaches to the exploration of ageing during a pandemic situation One of the first collections of its kind it offers an array of studies employing research methodologies that lend themselves to replication in similar contexts by those seeking to understand the effects of epidemics on older people Thematically organised it shows how to reconcile qualitative and quantitative approaches thus rendering them complementary bringing

together studies from around the world to offer an international perspective on ageing as it relates to an unprecedented epidemiological phenomenon As such it will appeal to researchers in the field of gerontology as well as sociologists of medicine and clinicians seeking to understand the disruptive effects of the recent coronavirus outbreak on later life

*Biology and Chemistry of Beta Glucan* Vaclav Vetvicka, Miroslav Novak, 2013-05-24 Despite of the efforts of pharmaceutical researchers to find new medicaments nature offers many substances with healing properties beta glucans belong to this group of compounds The second volume of the e book series Biology and Chemistry of Beta Glucan provides new knowledge about these important polysaccharides In order to understand the role of beta glucans it is necessary to control the purity and to determine their composition and structure This volume presents modern chemical and separation methods which are applied in structural analysis of glucans As a result of structural analyses it can be concluded that beta glucans of different origin vary in chain length number and types of branching The book further discusses the biological effects of tailored oligomers and synthetic beta glucans including innovative use of enzymatic processes in the synthesis of these compounds This volume also discusses a hypothesis of beta glucans increasing impact on the photodynamic therapy In spite of many scientific papers describing the positive role of beta glucans in protection against diseases certain epidemiological data suggest that specific illnesses can be related to beta glucan exposure The fact of whether or not beta glucan is an accompanying substance of these biologically active agents is also questioned Biology and Chemistry of Beta Glucan Volume 2 focuses on the strictly scientific basis on the effects of beta glucan on human health as well as other possibilities of beta glucan application such as protection of aquaculture against diseases
