## **Evolutionary Theory The Unfinished Synthesis:**

*Evolutionary Theory* Robert G. B. Reid, 1985      **Unfinished Synthesis** Niles Eldredge, 1985 Written by an eminent evolutionary biologist the co founder of the theory of punctuated equilibria this stimulating critique of modern evolutionary thought introduces an insightful theory concerning the ecological and genealogical hierarchies which interact to produce evolution Interesting and provocative A must for those with a genuine interest in the processes of evolution Choice

**Evolutionary Theory** Niles Eldredge, Telmo Pievani, Emanuele Serrelli, Ilya Tëmkin, 2016-09-23 The natural world is infinitely complex and hierarchically structured with smaller units forming the components of progressively larger systems molecules make up cells cells comprise tissues and organs that are in turn parts of individual organisms which are united into populations and integrated into yet more encompassing ecosystems In the face of such awe inspiring complexity there is a need for a comprehensive non reductionist evolutionary theory Having emerged at the crossroads of paleobiology genetics and developmental biology the hierarchical approach to evolution provides a unifying perspective on the natural world and offers an operational framework for scientists seeking to understand the way complex biological systems work and evolve Coedited by one of the founders of hierarchy theory and featuring a diverse and renowned group of contributors this volume provides an integrated comprehensive cutting edge introduction to the hierarchy theory of evolution From sweeping historical reviews to philosophical pieces theoretical essays and strictly empirical chapters it reveals hierarchy theory as a vibrant field of scientific enterprise that holds promise for unification across the life sciences and offers new venues of empirical and theoretical research Stretching from molecules to the biosphere hierarchy theory aims to provide an all encompassing understanding of evolution and with this first collection devoted entirely to the concept will help make transparent the fundamental patterns that propel living systems      **Understanding Evolution in Darwin's "Origin"** Maria

Elice Brzezinski Prestes, 2023-10-10 This book aims to encourage the reading of *On the Origin of Species* and to include it in the teaching of evolution With a comprehensive overview of the development of Darwin's theory the volume provides relevant aspects of Darwin's life and work in connection with the broader context of his time The historical and philosophical analysis mirrored in the socio cultural scope enables the diachronic reading of the text It is built on various sources of historians and philosophers of science and sheds fresh light on them Its uniqueness is the broad structure that covers four parts the pre Darwinian concepts of species changes some key elements of Darwin's pursuit of the causes of evolution from his voyage on Beagle to the publication of his groundbreaking work chapter by chapter analysis of the *Origin* and subsequent developments in evolutionary thought This book is of interest to undergraduate and graduate students scholars in history philosophy and sociology of science and science education as well as the general public      **Theologies and Moral Concern** Paul

Gottfried, 2018-04-24 This is the twenty ninth volume in *This World* a series on religion and public affairs It focuses on theological and moral questions of deep significance for our time The lines of division separating secular and religious

outlooks modernity and postmodernism and romantic and classical styles of thought are some of the topics treated in this volume. Additional features are an exchange of opinions and a position paper intended to generate further discussion. This ongoing series of volumes seeks to provide a wide ranging forum for differing views on religious and ethical considerations. Theologies and Moral Concern include the following major contributions: Distinctions of Power: How Church and State Divide America by Brian Mitchell; Beyond the Impasses: Making Moral Sense of Abortion by Anthony Matteo; Are Religions Ever Traditional by Jacob Neusner; Philosophical Issues in Darwinian Theory by Kenneth T. Gallagher; Monotheism and Skepticism by Aryeh Botwinick; Defining Romantic Theology by Gerhard Spiegler; and The YMCA and Suburban America by Clifford Putney. In addition, the volume features a dialogue between Michael A. Weinstein and Paul Gottfried on what constitutes the proper role for liberal arts education in contemporary American society, as well as a position paper titled The Pitfalls of Political Correctness by Lawrence Nannery. Theologies and Moral Concern is part of an annual survey of religion and public life which aims to provide relevant information and ideas about significant issues of the day. It is directly pertinent to understanding the connection between religion and the state. This particular volume, coming at a time of intense public scrutiny of fundamentalism, evangelicism, and new religious movements, generally should have special appeal for political scientists, American studies specialists, sociologists, and those involved in the creation of public policy.

**The Mystery of Evolutionary Mechanisms** Robert F. Shedinger, 2019-06-28. Is Darwinian evolution really the most successful scientific theory ever proposed, or even the best idea anyone has ever had, as Daniel Dennett once put it? The Mystery of Evolutionary Mechanisms provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins, revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory. The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after Origin of Species, a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life's origin and diversity. The Mystery of Evolutionary Mechanisms calls for an embrace of mystery understood not as an abdication of the scientific quest for truth, but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life.

**Perilous Planet Earth** Trevor Palmer, 2003-06-12. A readable account of the history of natural disasters throughout history.

**The Structure of Evolutionary Theory** Stephen Jay Gould, 2002-03-21. The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time, a landmark publication both for its historical sweep and for its scientific vision. With characteristic attention to detail, Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism: that natural selection works on organisms, not genes or species; that it is almost exclusively the mechanism of adaptive evolutionary change; and that these changes are incremental, not drastic. Next, he examines the three critiques that

currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century **Beyond Mechanism** Brian G. Henning, Adam Scarfe, 2013-02-01 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences

Information Theory And Evolution (Third Edition) John Scales Avery, 2021-11-24 This highly interdisciplinary book discusses the phenomenon of life including its origin and evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides

nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress

**Post-process Theory** Thomas Kent,1999 Breaking with the still dominant process tradition in composition studies post process theory or at least the different incarnations of post process theory discussed by the contributors represented in this collection of original essays endorses the fundamental idea that no codifiable or generalizable writing process exists or could exist Post process theorists hold that the practice of writing cannot be captured by a generalized process or a big theory Most post process theorists hold three assumptions about the act of writing writing is public writing is interpretive and writing is situated The first assumption is the commonsensical claim that writing constitutes a public interchange By interpretive act post process theorists generally mean something as broad as making sense of and not exclusively the ability to move from one code to another To interpret means more than merely to paraphrase it means to enter into a relationship of understanding with other language users And finally because writing is a public act that requires interpretive interaction with others writers always write from some position or some place Writers are never nowhere they are situated Leading theorists and widely published scholars in the field contributors are Nancy Blyler John Clifford Barbara Couture Nancy C DeJoy Sidney I Dobrin Elizabeth Ervin Helen Ewald David Foster Debra Journet Thomas Kent Gary A Olson Joseph Petraglia George Pullman David Russell and John Schilb

**Information Theory And Evolution (2nd Edition)** John Scales Avery,2012-05-21 Information Theory and Evolution discusses the phenomenon of life including its origin and evolution and also human cultural evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems This paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources as the author will show The role of information in human cultural evolution is another focus of the book The first edition of Information Theory and Evolution made a strong impact on thought in the field by bringing together results from many disciplines The new second edition offers updated results based on reports of important new research in several areas including exciting new studies of the human mitochondrial and Y chromosomal DNA Another extensive discussion featured in the second edition is contained in a new appendix devoted to the relationship of entropy and Gibbs free energy to economics This appendix includes a review of the ideas of Alfred Lotka Frederick Soddy Nicholas Georgiescu Roegen and Herman E Daly and discusses the relevance of these ideas to the current economic crisis The new edition discusses current research on the origin of life the distinction between thermodynamic information and cybernetic information new DNA research and human prehistory developments in current information technology and the relationship between entropy and economics

**Climate Change and the Course of Global History**

John L. Brooke,2014-03-17 The first global study by a historian to fully integrate the earth system approach of the new

climate science with the material history of humanity      *Parental Care: Evolution, Mechanisms, And Adaptive Significance*  
,1996-11-18 Advances in the Study of Behavior presents its first thematic volume focusing on the physiological and behavioral mechanisms underlying parental care The book discusses parental care both within and across taxa with coverage of invertebrates and early vertebrates fishes amphibia reptiles mammals birds and nonhuman primates A running theme throughout the chapters shows that parental care is anchored to the ecology reproductive physiology and embryonic development of a species Coverage also includes mechanisms of parental care including analysis of the stimuli that parents respond to and how parental care is initiated maintained and terminated Individual differences within species are also explored examining stable differences in maternal style how they arise and the consequences for both mother and infant

**Hierarchical Evolutionary-Developmental Theory** Carlos Ochoa,2025-06-23 This book introduces a new evolutionary model called Hierarchical Evolutionary Developmental Theory or H Evo Devo Theory This theory proposes that the organism's internal properties reflect entities that are highly integrated in developmental terms that evolve hierarchically In other words it attempts to demonstrate that developmental constraints operate at different scales producing distinct states of morphological stability reflected as subspecies species higher taxa and homologues all representing units of evolution In addition it reintroduces the concept of the organism in evolutionary biology supports a strictly macroevolutionary view and contemplates alternative evolutionary rates processes and mechanisms at different levels microevolution macroevolution megaevolution and modular evolution In short this book establishes a new synthesis between systematics morphology and evolution suggesting a significant shift in evolutionary thought The book comprises 1 A proposal for a new theory of evolution and systematics The H Evo Devo Theory reinterprets the concepts of subspecies species higher taxa and homologues proposing that the phylogenetic tree is built on a hierarchy of types developed from the top down in contrast to the traditional bottom up approach 2 A novel hierarchical perspective that reveals the underlying mechanisms acting on the patterns of divergence stability and extinction of the units of evolution 3 A resolution to the ontological problem regarding units of evolution e g the reality of species and higher taxa 4 A historical narrative that focuses on the development of a hierarchy theory of evolution grounded in the type concept and the significance of an organism centered perspective 5 A challenge to traditional frameworks that have sought to establish hierarchies in an evolutionary context 6 A challenge to classical evolutionary statements such as gradualism punctuated equilibrium the extrapolationist premise and geographical models of speciation This book is written for those who feel that radical change is needed in evolutionary theory offering them a viable alternative      **Evolutionary Biology** Max K. Hecht,Bruce Wallace,2013-11-11 Evolutionary Biology of which this is the twenty second volume continues to offer its readers a wide range of original articles reviews and commentaries on evolution in the broadest sense of that term The topics of the reviews range from anthropology molecular evolution and paleobiology to principles of systematics In recent volumes a broad spectrum of articles have appeared on such subjects as

**Biological Information** Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, John C Sanford, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information

*The Structure and Confirmation of Evolutionary Theory* Elisabeth A. Lloyd, 2021-01-12 Traditionally a scientific theory is viewed as based on universal laws of nature that serve as axioms for logical deduction In analyzing the logical structure of evolutionary biology Elisabeth Lloyd argues that the semantic account is more appropriate and powerful This book will be of interest to biologists and philosophers alike

*Natural Selection* Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation It is common to present the 1930 1960 period as characterized by the rise of the Modern Synthesis an event structured around two main explanatory commitments 1 Gradual evolution is explained by small genetic changes variations oriented by natural selection a process leading to adaptation 2 Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension

of processes and mechanisms occurring at the previous microevolutionary level. On this view, natural selection holds a central explanatory role in evolutionary theory, one that presumably reaches back to Charles Darwin's *Origin of Species*, a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide: theories relying on strong selective factors and those appealing only to weak ones. If one reads the new analyses presented in this volume by biologists, historians, and philosophers, this divide seems to be collapsing at a rapid pace, opening an era dedicated to the search for a new paradigm for the development of evolutionary biology. Contrary to popular belief, scholars' position on natural selection is not in itself a significant discriminatory factor between most evolutionists. In fact, the intellectual space is quite limited, if not non-existent, between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms. The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development. In this book, the labels created under the traditional historiography—Darwinian Revolution, Eclipse of Darwinism, Modern Synthesis, Post-Synthetic Developments—are thus re-evaluated. This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers.

*Biological Emergences* Robert G. B. Reid, 2009-08-21

A critique of selectionism and the proposal of an alternate theory of emergent evolution that is causally sufficient for evolutionary biology. Natural selection is commonly interpreted as the fundamental mechanism of evolution. Questions about how selection theory can claim to be the all-sufficient explanation of evolution often go unanswered by today's neo-Darwinists, perhaps for fear that any criticism of the evolutionary paradigm will encourage creationists and proponents of intelligent design. In *Biological Emergences*, Robert Reid argues that natural selection is not the cause of evolution. He writes that the causes of variations, which he refers to as natural experiments, are independent of natural selection; indeed, he suggests, natural selection may get in the way of evolution. Reid proposes an alternative theory to explain how emergent novelties are generated and under what conditions they can overcome the resistance of natural selection. He suggests that what causes innovative variation causes evolution and that these phenomena are environmental as well as organismal. After an extended critique of selectionism, Reid constructs an emergence theory of evolution, first examining the evidence in three causal arenas of emergent evolution: symbiosis, association, evolutionary physiology, behavior, and developmental evolution. Based on this evidence of causation, he proposes some working hypotheses, examining mechanisms and processes common to all three arenas and arrives at a theoretical framework that accounts for generative mechanisms and emergent qualities. Without selectionism, Reid argues, evolutionary innovation can more easily be integrated into a general thesis. Finally, Reid proposes a biological synthesis of rapid emergent evolutionary phases and the prolonged dynamically stable non-evolutionary phases imposed by natural selection.
