Evolving Cosmos:

Evolving Cosmos Govert Schilling, 2004-11-18 Mankind is a child of the cosmos The atoms in our bodies originate in the interiors of other stars and we cannot regard our existence separately from the evolution of the universe Without the Big Bang and the formation of galaxies planets and organic molecules we simply would not have happened In this fascinating book science journalist Govert Schilling takes the reader on a whirlwind journey through time He describes the evolution of the cosmos from the beginning of space and time fourteen billion years ago to the creation of the Earth and mankind The book ends with a glance into the distant future of the universe because the here and now are only fleeting moments in its biography A combination of compelling text and breathtaking photographs provide an impressive vision of the place of man in the cosmos

The Self-evolving Cosmos Steven M. Rosen, 2008 This unique book offers an original way of thinking about two of the most significant problems confronting modern theoretical physics the unification of the forces of nature and the evolution of the universe In bringing out the inadequacies of the prevailing approach to these questions the author demonstrates the need for more than just a new theory The meanings of space and time themselves must be radically rethought which requires a whole new philosophical foundation To this end the book turns to the phenomenological writings of Maurice Merleau Ponty and Martin Heidegger Their insights into space and time bring the natural world to life in a manner well suited to the dynamic phenomena of contemporary physics In aligning continental thought with problems in physics and cosmology the book makes use of topology Phenomenological intuitions about space and time are systematically fleshed out via an unconventional and innovative approach to this qualitative branch of mathematics The author's pioneering work in topological phenomenology is applied to such topics as quantum gravity cosmogony symmetry spin vorticity dimension theory Kaluza Klein and string theories fermion boson interrelatedness hypernumbers and the mind matter interface
