Evolving Property Rights In Marine Fisheries:

Evolving Property Rights in Marine Fisheries Donald Leal, 2005 This book examines the development of property rights in marine fisheries and asks whether the obstacles to their continued development cannot be more easily overcome. The contributed chapters generally focus on the consequences of a lack of property rights of commercial and small time fishers globally. National governments have recognized that the absence of such rights coupled with the technological advances in commercial fishing have resulted in widespread economic and environmental problems e.g. overfishing, bycatching, highgrading, increased physical dangers and lower profits. The most significant solution to these problems and the predominate concern of this book is the institution of Individual Transferable Quotas (ITQs) also known as Individual Fishing Quotas (IFQs). These are national and global policies, public and private sector managed allocations of the amount of various species of fish at certain qualities can be harvested at particular times by fishers. [Handbook of Marine Fisheries Conservation and Management](#) R. Quentin Grafton, 2010-01-21 This handbook is the most comprehensive and interdisciplinary work on marine conservation and fisheries management ever compiled. Its many valuable contributions offer a way forward to both understanding and resolving the multifaceted problems facing the world's oceans. **Evolving Approaches to Managing Marine**

Recreational Fisheries Donald Leal, Vishwanie Maharaj, 2009-01-01 Each year thirteen million anglers enjoy the sport of saltwater angling in the United States, generating an estimated 30 billion in sales and supporting nearly 350,000 jobs. Recreational saltwater fishing, however, can significantly impact species of concern, species overfished or experiencing overfishing. Traditional angling controls, bag and size limits and restricted seasons, have fallen short in controlling fishing impacts and reducing conflicts among fishing and non-fishing interests. **Evolving Approaches to Managing Marine Recreational Fisheries** offers ways of overcoming such problems while providing anglers and the recreational service industry greater regulatory flexibility to enjoy the fruits of sportfishing. It features fourteen internationally recognized fishery experts presenting the pros and cons of using individual fishing quotas (IFQs), game tags and angler management organizations (AMOs) in managing marine recreational fisheries, presenting both theoretical and practical solutions to help move recreational fisheries management to a new and improved level. **Encyclopedia of Energy, Natural Resource,**

and Environmental Economics, 2013-03-29 Every decision about energy involves its price and cost. The price of gasoline and the cost of buying from foreign producers, the price of nuclear and hydroelectricity and the costs to our ecosystems, the price of electricity from coal-fired plants and the cost to the atmosphere. Giving life to inventions, lifestyle changes, geopolitical shifts and things in between, energy economics is of high interest to Academia, Corporations and Governments. For economists, energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources, energy economics which focuses on energy related subjects such as

renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government
