Logic, Meaning and Computation C. Anthony Anderson,Michael Zelény,2012-12-06

This volume began as a remembrance of Alonzo Church while he was still with us and is now finally complete It contains papers by many well known scholars most of whom have been directly influenced by Church s own work Often the emphasis is on foundational issues in logic mathematics computation and philosophy as was the case with Church s contributions now universally recognized as having been of profound fundamental significance in those areas The volume will be of interest to logicians computer scientists philosophers and linguists The contributions concern classical first order logic higher order logic non classical theories of implication set theories with universal sets the logical and semantical paradoxes the lambda calculus especially as it is used in computation philosophical issues about meaning and ontology in the abstract sciences and in natural language and much else The material will be accessible to specialists in these areas and to advanced graduate students in the respective fields

Reuniting the Antipodes - Constructive and Nonstandard Views of the Continuum Peter Schuster,Ulrich Berger,Horst Osswald,2013-03-14 At first glance Robinson s original form of nonstandard analysis appears nonconstructive in essence because it makes a rather unrestricted use of classical logic and set theory and in particular of the axiom of choice Recent developments however have given rise to the hope that the distance between constructive and nonstandard mathematics is actually much smaller than it appears So the time was ripe for the first meeting dedicated simultaneously to both ways of doing mathematics and to the current and future reunion of these seeming opposites Consisting of peer reviewed research and survey articles written on the occasion of such an event this volume offers views of the continuum from various standpoints Including historical and philosophical issues the topics of the contributions range from the foundations the practice and the applications of constructive and nonstandard mathematics to the interplay of these areas and the development of a unified theory

Formal Ontology and Conceptual Realism Nino B. Cocchiarella,2007-09-05

Theories about the ontological structure of the world have generally been described in informal intuitive terms This book offers an account of the general features and methodology of formal ontology The book defends conceptual realism as the best system to adopt based on a logic of natural kinds By formally reconstructing an intuitive informal ontological scheme as a formal ontology we can better determine the consistency and adequacy of that scheme

(Over)Interpreting Wittgenstein

A. Biletzki,2012-09-14 Over Interpreting Wittgenstein will be read by philosophers investigating Wittgenstein and by scholars interpreters students and specialists in both analytic and continental philosophy It will intrigue readers interested in issues of interpretation and cultural studies This book tells the story as yet untold of Wittgenstein interpretation during the past eighty years It provides different interpretations chronologies developments and controversies It aims to discover the socio cultural rather than psychological motives and motivations behind the philosophical community s project of interpreting Wittgenstein

As a cultural history of ideas it traces the parallelism between Wittgenstein interpretation and the move from metaphysics to language to postmodernism effected in the twentieth century *Reference, Truth and Conceptual Schemes* G.

Forrai,2013-03-14 1 HISTORICAL BACKGROUND The purpose of the book is to develop internal realism the metaphysical epistemological doctrine initiated by Hilary Putnam Reason Truth and History Introduction Many Faces In doing so I shall rely sometimes quite heavily on the notion of conceptual scheme I shall use the notion in a somewhat idiosyncratic way which however has some affinities with the ways the notion has been used during its history So I shall start by sketching the history of the notion This will provide some background and it will also give opportunity to raise some of the most important problems I will have to solve in the later chapters The story starts with Kant Kant thought that the world as we know it the world of tables chairs and hippopotami is constituted in part by the human mind His central argument relied on an analysis of space and time and presupposed his famous doctrine that knowledge cannot extend beyond all possible experience It is a central property of experience he claimed that it is structured spatially and temporally However for various reasons space and time cannot be features of the world as it is independently of our experience So he concluded that they must be the forms of human sensibility i.e necessary ingredients of the way things appear to our senses **Theoretical Knowledge**

Viacheslav Semenovitch Stepin,2005-07-12 He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non classical and post non classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures **Brouwer meets Husserl** Mark van

Atten,2006-11-08 Can the straight line be analysed mathematically such that it does not fall apart into a set of discrete points as is usually done but through which its fundamental continuity is lost And are there objects of pure mathematics that can change through time Mathematician and philosopher L E J Brouwer argued that the two questions are closely related and that the answer to both is yes To this end he introduced a new kind of object into mathematics the choice sequence But other mathematicians and philosophers have been voicing objections to choice sequences from the start This book aims to provide a sound philosophical basis for Brouwer's choice sequences by subjecting them to a phenomenological critique in the style of the later Husserl **The Withdrawal of Rights** O. Ezra,2013-06-29 Like most discussions within the tradition of rights talk this study is motivated by the desire to promote the idea that rights are moral assets that people should acquire in the course of their membership within social and political frameworks However while most participants in rights talk concentrate on the

safety and protection constraints required for a successful exercising of rights the present study inquires into the circumstances under which people's rights lose their validity The author believes that if we want to prevent the erosion of the role of rights within society and to encourage their obligatory status we should prevent their misuse or their unjustified or excessive use Those who have interests in rights and are concerned about their withdrawal or denial will find a unique and inventive way of dealing both with the use as well as the abuse of rights **Explanation** Giora Hon, Sam S.

Rakover, 2013-04-17 For some years we have been conducting at the University of Haifa an interdisciplinary seminar on explanation in philosophy and psychology We habitually begin the seminar with some philosophical reflections on explanation an analysis of the concept and its metaphysical underpinnings We discuss the various models and proceed to examine explanation in the setting of psychology Thus from the outset we have focused not only on the concept itself but also on its application The objective that we have set for the seminar attended by students from both departments Philosophy and Psychology has been a critical understanding of the concept of explanation its use and limitations We were keen on deepening our understanding of the concept and on exploring its applications in fields of knowledge other than psychology This was the motivation for convening an international conference on explanation and its application The conference took place in the spring of 1998 under the auspices of the University of Haifa The present book is the fruit of this meeting The reader should note that the second part of the Introduction presents a detailed analytical account of the book We hope that this overview will facilitate efficient use of the book by directing the reader's attention to those issues that might be of interest to him or her Essays in Memory of Imre Lakatos Robert S. Cohen, P.K. Feyerabend, Marx W.

Wartofsky, 2012-12-06 The death of Imre Lakatos on February 2 1974 was a personal and philosophical loss to the worldwide circle of his friends colleagues and students This volume reflects the range of his interests in mathematics logic politics and especially in the history and methodology of the sciences Indeed Lakatos was a man in search of rationality in all of its forms He thought he had found it in the historical development of scientific knowledge yet he also saw rationality endangered everywhere To honor Lakatos is to honor his sharp and aggressive criticism as well as his humane warmth and his quick wit He was a person to love and to struggle with PAUL K FEYERABEND ROBERT S COHEN MARX W WARTOFSKY TABLE OF CONTENTS Preface VII JOHN WORRALL Imre Lakatos 1922 1974 Philosopher of Mathematics and Philosopher of Science JOSEPH AGASSI The Lakatosian Revolution 9 23 D M ARMSTRONG Immediate Perception w W BAR TLEY III On Imre Lakatos 37 WILLIAM BERKSON Lakatos One and Lakatos Two An Appreciation 39 I B COHEN William Whewell and the Concept of Scientific Revolution 55 L JONATHAN COHEN How Can One Testimony Corroborate Another 65 R S COHEN Constraints on Science 79 GENE D AMOUR Research Programs Rationality and Ethics 87 YEHUDA ELKANA Introduction Culture Cultural System and Science 99 PA UL K *Philosophical Foundations of Science* Raymond J. Seeger, Robert S. Cohen, 2012-12-06 At the 1969 annual meeting of the American Association for the Advancement of Science held in Boston on

December 27-29 a sequence of symposia on the philosophical foundations of science was organized jointly by Section L of the Association and the Boston Colloquium for the Philosophy of Science. Section L is devoted to the history of philosophy, logic and sociology of science with broad connotations extended both to science and to philosophy. With collaboration generously extended by other and more specialized Sections of the AAAS the Section L program took an unusually rich range of topics and indeed the audiences were large and the discussions lively. This book, regrettably delayed in publication, contains the major papers from those symposia of 1969. In addition it contains the distinguished George Sarton Memorial Lecture of that meeting, Boltzmann, Monocycles and Mechanical Explanation by Martin J. Klein. Some additions and omissions should be noted. In Part I, dedicated to the 450th anniversary of the birth of Leonardo da Vinci, we have been unable to include a contribution by Elmer Belt who was prevented by storms from participating. In Part II on physics and the explanation of life we were unable to persuade Isaac Asimov to overcome his modesty about the historical remarks he made under the title Arrhenius Revisited. *Rudolf Carnap, Logical Empiricist* Jaakko Hintikka, 2014-11-14. [Philosophical Lectures on Probability](#) Bruno de Finetti, 2008-05-20. Bruno de Finetti (1906-1985) is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey. His related notion of exchangeability revolutionized the statistical methodology. This book, based on a course held in 1979, explains in a language accessible also to non-mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains. [A Boole Anthology](#) James Gasser, 2013-11-11. Modern mathematical logic would not exist without the analytical tools first developed by George Boole in *The Mathematical Analysis of Logic* and *The Laws of Thought*. The influence of the Boolean school on the development of logic always recognised but long underestimated has recently become a major research topic. This collection is the first anthology of works on Boole. It contains two works published in 1865, the year of Boole's death but never reprinted as well as several classic studies of recent decades and ten original contributions appearing here for the first time. From the programme of the English Algebraic School to Boole's use of operator methods from the problem of interpretability to that of psychologism a full range of issues is covered. The Boole Anthology is indispensable to Boole studies and will remain so for years to come. **Collected Papers of Stig Kanger with Essays on his Life and Work** Ghita Holmström-Hintikka, Sten Lindström, R. Sliwinski, 2012-12-06. Stig Kanger (1924-1988) made important contributions to logic and formal philosophy. Kanger's dissertation *Provability in Logic* (1957) contained significant results in proof theory as well as the first fully worked out model-theoretic interpretation of quantified modal logic. It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic. Kanger's most original achievements were in the areas of general proof theory, the semantics of modal and deontic logic and the logical analysis of the concept of rights. He also contributed to action theory, preference logic and the theory of measurement.

This is the first of two volumes dedicated to the work of Stig Kanger. The present volume is a complete collection of Kanger's philosophical papers. The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends.

Visualization, Explanation and Reasoning Styles in Mathematics P. Mancosu, Klaus Frovin Jørgensen, S.A. Pedersen, 2006-03-30

In the 20th century philosophy of mathematics has to a great extent been dominated by views developed during the so called foundational crisis in the beginning of that century. These views have primarily focused on questions pertaining to the logical structure of mathematics and questions regarding the justification and consistency of mathematics. Paradigmatic in this respect is Hilbert's program which inherits from Frege and Russell the project to formalize all areas of ordinary mathematics and then adds the requirement of a proof by epistemically privileged means. The consistency of such formalized theories. While interest in modified versions of the original foundational programs is still thriving in the second part of the twentieth century several philosophers and historians of mathematics have questioned whether such foundational programs could exhaust the realm of important philosophical problems to be raised about the nature of mathematics. Some have done so in open confrontation and hostility to the logically based analysis of mathematics which characterized the classical foundational programs while others and many of the contributors to this book belong to this tradition have only called for an extension of the range of questions and problems that should be raised in connection with an understanding of mathematics. The focus has turned thus to a consideration of what mathematicians are actually doing when they produce mathematics. Questions concerning concept formation understanding heuristics changes in style of reasoning the role of analogies and diagrams etc.
