**Theories and Applications in the Detection of Deception** Gershon Ben-Shakhar, John J. Furedy, 2012-12-06 Polygraphy lie detection and the detection of deception are all terms that refer to an application of the science of psychophysiology which itself employs physiological measures to study and differentiate between psychological processes The issues raised by polygraphy are controversial One such issue is whether the polygraph is a genuinely scientifically based application or merely a purported application of psychophysiology Such concerns are of interest not only to polygraph practitioners and to specialists in psychophysiology but also to such other specialists as those in the legal and forensic professions Moreover there are two sorts of nonspecialists who should also be concerned On the one hand there are the potential users of the polygraph for example a manager who employs a polygrapher to check on subordinates on the other hand there are those used by the polygraph the employee who is subjected to the poly graphic examination To begin with the user of the polygraph this person should know not only about its overall accuracy but also about the rationales of the various detection methods and their validity for different purposes in different sorts of situations This information is important because even for the potential user there are costs as well as benefits Aside from the lack of trust generated by the polygraph there have also been successful suits by employees against employers so there are traps in polygraph usage that employers and managers need to keep in mind
