Overview

The Oracle AS Adapter for JMS is part of the Oracle BPEL Process Manager install and is a JCA 1.5 Resource Adapter. The Adapter Framework (AF) is used for the bidirectional integration of the JCA 1.5 resource adapters with BPEL Process Manager. Adapter FW is based on open standards and employs the Web Service Invocation Framework (WSIF) technology for exposing the underlying JCA Interactions as Web Services. This example showcases the following:

- (1) a MQSeries Queue Consumer dequeuing the message from a MQSeries queue and triggering the BPEL process. The message payload is of type "Text" and is defined by a XSD
- (2) A MQSeries Topic Producer enqueueing the message to a MQSeries Topic based on the invoke BPEL message.

Configuring the MQSeries Queue Consumer Service – PartnerLink

The Oracle Adapters have an easy-to-use Adapter Wizard that is supported on both JDeveloper and Eclipse platforms. This example showcases the steps for the JDeveloper IDE and is pretty much the same for the Eclipse IDE as well.

1. Launch JDeveloper. This is bundled with the BPEL Process Manager product.

Velleman, Gale M. Strasburg, 2025-05-15 Over the past several decades the poultry industry has achieved huge improvements in global poultry production including with increased growth performance improved body composition higher market weight increased feed efficiency reduced production costs and increased profitability for growers These gains have resulted from a combination of intensive genetic selection tailored nutritional approaches and novel poultry management strategies However these improvements in broiler chicken and turkey production have also come with costs These costs include increased susceptibility to environmental stress increased mortality in commercial poultry flocks and muscle pathogenesis ultimately leading to deleterious effects on meat quality traits affecting appearance texture and protein functionality For example a subset of fast growing domestic turkeys develops spontaneous cardiomyopathy or round heart disease that leads to a mortality rate up to 15% at 2 to 4 weeks of age Even turkeys that survive the critical first two weeks after hatch already have damaged hearts at a prevalence of 80% to 90% which may lead to growth retardation during the grow out phase This syndrome can also occur in broiler chickens which causes major economic losses and limits the maximum profitability in the poultry industry world wide Another example is wooden breast an abnormal muscle condition resulting in a hardening of the breast muscle affecting meat texture Other examples include green muscle disease also known as deep pectoral muscle myopathy spaghetti meat and white striping All of these pathologies include the development of myopathic changes subsequently affecting meat quality leading to consumer complaints and economic losses by the processing industry There is a paucity of information on the etiologies of broiler and turkey muscle pathogenesis and their consequent effects on muscle physiology This Research Topic will highlight the mechanisms of skeletal and cardiac muscle pathogenesis in poultry that are responsible for premature bird mortality and altered quality of muscle as a food This research topic will cover the recent findings in the area of myopathies in poultry Original Research and Review papers among other article types are welcome to be submitted to this collection *Computer Systems Series* ,1997 *Connecting Your Business Using IBM WebSphere Message Broker V7 as an ESB* Darrell Bleakley, Jenny Chow, Kirstine Clapperton, Sowmya Hebbur Dayananda, Vivek
