Underground Infrastructure of Urban Environments Nataliya Pankratova, Hennadii Haiko, Illia Savchenko, 2024-01-03

The book considers the underground development of cities from a systemic point of view. The authors' scientific methodology for planning a system of alternative design configurations in a metropolis including underground infrastructure on the basis of applied system analysis methods is revealed. The book presents a short guide and a number of practical applications of morphological analysis, cognitive modeling, and other system analysis methods as tools for solving various urban problems including risk assessment in the transport infrastructure of a city, evaluation and justification of constructing different types of underground objects on a selected site according to its structural, functional, and geological factors, construction of scenarios aimed at informed decision making in planning complex underground facilities. The book provides novel and convenient tools for urban development to professionals in urban planning, municipal authorities, and investors and researchers in urban studies.

Design of Deep Braced Excavation in Urban Geotechnical Environments Wengang

Zhang, Yanmei Zhang, Runhong Zhang, Yongqin Li, Li Hong, Yuntao Yuan, 2024-05-21. *Design of Deep Braced Excavation in Urban Geotechnical Environments* presents the design and calculation of deep braced excavation in urban geotechnical environments considering the soil characteristics of spatial variability and anisotropy as well as excavation responses of urban adjacent utilities such as pipelines, tunnels, foundation piles, and buildings. With economic development and further urbanization, excavation goes deeper, longer, and larger in scale. These conditions require advanced analysis and design methods. The text begins with coverage of overall stability, earth pressure, and strut force retaining wall responses and ground movements. Numerical modeling and computer codes are outlined in detail. The authors then take a close look at the design of jet grouting for deformation control, instrumentation, and back analysis for excavation and the characteristics of deep braced excavation in complex geological environment. The final chapters conclude with an examination of the determination of excavation responses of urban adjacent utilities and failure analysis based on several case histories. This book provides the latest knowledge in both theory and practical application for geotechnical design engineers working on deep excavation problems. Presents the latest theory and knowledge surrounding deep braced excavations. Systematically outlines theory, field reports, calculations, and back analysis, making it much easier to master the work relevant with deep braced excavations. Provides detailed visual elements and hyperlinks to additional images and video for case excavations to enhance understanding.
