The background of the cover is a rich, detailed painting. In the foreground, a delicate white teacup with a gold rim sits on a matching saucer, which is decorated with a floral pattern. To the right, a white ceramic vase holds a large, vibrant pink peony. Behind the teacup, a large, ornate mirror with a dark wooden frame reflects a soft, hazy scene. A floral-patterned cushion rests against the base of the mirror. In the upper right, a glass pitcher with a floral design sits on a surface. The overall style is classic and elegant, with a focus on light and texture.

Everything You and Your Teachers Need to Know About the Learning Brain Sabine Peters, Nienke van Atteveldt, Jessica Massonnié, Stephan E. Vogel, 2020-12-08 Children go to school to learn and learning takes place in the brain In the age period of formal schooling a child's brain is still undergoing major developmental changes For these reasons neuroscience the study of the brain and education are closely connected Learning is possible because the brain is plastic plasticity refers to the capacity of the brain to reorganize its structure and thereby change function and behavior But what exactly changes in the brain when we learn something new What are optimal conditions for the brain to learn Why do we also forget things What developmental changes occur in the brain during childhood and adolescence and how are these processes different or similar to the neural mechanisms of learning and memory Neuro imaging research or brain scanning has accelerated our current understanding of brain development learning memory and other school related skills such as reading and math but also creativity metacognition and learning related emotions and anxieties But what do these brain scanning techniques actually measure What kind of questions can we address with neuro imaging and what are the limitations In this Collection we will provide an accessible overview of the current state of the art insights into the mechanisms of brain development learning and memory The collection will help children understand how their brains learn and develop and how these processes are shaped by their environment and their own efforts Moreover we will discuss why it is important that their teachers and other educational practitioners know about the brain and neuroscience methods Finally we will also explain what happens if wrong ideas about the brain circulate or the correct knowledge is misinterpreted Neuromyths such as we only use 10 percent of our brain are persistent but important to counter with explaining why they are false and what is true instead **I'll Learn to**
