Excerpt from *Readings in Evolution Genetics and Eugenics*

This book has been prepared to meet a specific demand long felt here and elsewhere for an account of the various phases of evolutionary biology condensed within the scope of one volume of moderate size. The present writer has now for sixteen successive years presented in lecture form to large classes of students the subjects of evolution, genetics, and eugenics. Never have we been able to find a single book that would cover the required ground. In fact it has been necessary to require or at least to recommend as many as three books. It is believed that the present book will furnish adequate reading material for a major or a semester course in evolutionary biology. Some supplementary reading may be necessary in case an instructor wishes to emphasize one or more phases of the subject, but for a first course in the subject we believe that all of the essential reading material will be found within the text itself. An effort has been made to present the subject in the best pedagogical order. After a general introduction, a rather long chapter appears in which the whole history of the development of evolutionary science is outlined together with the names and contributions of the leading evolutionists. Part II is a presentation of the evidences of organic evolution, beginning with the bodies of evidence most definite and direct and ending with the less definite and more controversial. Part III deals with causal mechanical theories of evolution, with Darwinism as the central topic. Part IV concerns itself with genetics or modern experimental evolution, and Part V with eugenics or genetics as applied to human improvement. The book consists largely of excerpts, some long and some short, from both the older classical evolutionary writers and the modern writers. Our aim has been to select the most significant or characteristic passages from each author. In most cases this ideal has been attained, but it has sometimes happened that we have had to make our selection of material to meet a real need in the book and accordingly have selected from an author a passage he himself might not consider particularly characteristic of his work. We have succeeded nevertheless in welding together out of a collection of isolated chapters and passages what seems to us to be a close approach to a coherent unit. Unification has been accomplished by the aid of editorial connecting passages, introductory statements, criticisms, and summaries.

Sarkar, 2012-12-06 genetics It is simply the appropriation of that term very likely with insufficient knowledge and respect for its past usage For that the Editor alone is responsible and requests tolerance He has as far as he can tell no intention or desire to use it for any historiographical purposes other than that just mentioned Even more important the decision to consider Muller together with

Fisher Haldane and Wright is also not original Crow 1984 has already done so arguing persuasively that Muller was keenly interested in evolution and made substantial contributions to the development of the neo Darwinian view Crow's reasons for considering these four figures together and the reasons discussed above are complementary This book continues a historiographical choice he initiated others will have to judge whether it is appropriate The foregoing considerations were intended to show why Fisher Haldane Muller and Wright should be considered together in the history of theoretical evolutionary genetics I By a welcome stroke of luck from the point of view of the Editor all four of these figures were born almost together between 1889 and 1892 and almost exactly a century ago It therefore seemed appropriate to use their birth centenaries to consider their work together A conference was held at Boston University on March 6 1990 under the auspices of the Boston Center for the Philosophy and History of Science to discuss their work This book has emerged mainly from that conference

Evolution and Ethics of Eugenics Nicolae Sfetcu, 2019-04-01 As eugenics is defined it is very difficult to make a clear distinction between science medicine genetic engineering and eugenics as a included field And to set a line over which genetic engineering should not go further according to moral legal and religious norms If we accept the help of genetics in finding ways to fight cancer diabetes or HIV we also accept positive eugenics as they are defined now And if we accept genetic screening and interventions on the unborn baby or abortion we also implicitly accept negative eugenics In addition at government level although eugenics are officially denied it has been legalized in many countries until recently and is still accepted and legalized albeit in subtle forms even these days The section Introduction defines the term and classification modes The section History of Eugenics follows eugenics from the ancient period the introduction of eugenics by Francis Galton the practice of eugenics as a state policy in various countries and the present eugenics liberal eugenics I then analyze various issues raised by the Ethics of Liberal Eugenics and I have developed a special section for the Future of Eugenics focusing on the human genome project Finally in the Conclusions I express my personal views on the current practice of eugenics CONTENTS Abstract Introduction New Eugenics The Future of Eugenics Conclusions Bibliography DOI 10.13140/RG.2.2.28662.45120
