The Evolution of Religion Bernard Joseph Verkamp, 1995 In the classical meaning of an essay this book is an attempt to try to unify material on religion from a variety of fields into one coherent frame of reference The author obviously does not claim deep expertise in this luxuriance of disciplinary approaches to the field of religion but hopes that his efforts at the very least will inform some and stimulate others to renewed theorizing about their specialties The principal objective of this book then is to show that religion has evolved just like any other cultural entity At the same time the author parts company from the at times premature conclusions of earlier evolutionists of religion and therefore has subtitled the work a re examination The main diversion from such earlier analyses of the evolution of religion as those of Freud and Comte is in the denial that religion can be explained fully in empirical terms as a product of nature or culture The author assumes that for religion to have begun it must have sprung from some ontologically prior event that Christians would refer to as creation and Buddhists as transcendence where ultimate Reality empties itself into the temporal In other words the evolution of religion needs to be understood from a theological perspective At the same time the author is convinced that there is a great deal of empirical evolutionary information available from the natural and social sciences that sheds helpful light on even theologically oriented religious understanding Religion will always be around concludes the author not merely because of the way that it springs up out of human nature but also because of its adaptability It thus may be mankind's one best hope of survival

The Landscapes of Science and Religion Nick Spencer,Hannah Waite,2025-01-24 The relationship between science and religion has long been a heated debate and is becoming an ever more popular topic The scientific capacity to manipulate and change humans and their environment through genetic engineering life extension and AI is going to take a huge leap forward in the twenty first century provoking endless debates around humans playing God But what do we mean by this Asking this question is surprisingly hard work Attempts to essentialise science let alone religion quickly run into trouble Where are the boundaries Whose definition of science is definitive Which concept of religious is the authoritative one Ultimately neither science nor religion can be pinned down to one single meaning or definition Rather they encompass a family of definitions that relate to one another in a complex web of shifting ways Drawing on extensive research with over a hundred leading thinkers in the UK including Martin Rees Brian Cox Susan Greenfield A C Grayling Ray Tallis Linda Woodhead Steve Bruce Adam Rutherford Robin Dunbar Francesca Stavrakopoulou and Iain McGilchrist The Landscapes of Science and Religion takes the much needed step of asking what science and religion actually are before turning to the familiar question of how they relate to one another Building on this by paying particular attention to those who sense some form of conflict here Spencer and Waite explore where the perceived conflict really lies What exactly are people disagreeing about when they disagree about science and religion and what if anything can we do to improve that disagreement and bring about a fruitful dialogue between these two important human endeavours
