Piper: A Model Genus for Studies of Phytochemistry, Ecology, and Evolution Lee A. Dyer, Aparna Palmer, 2012-12-06 Piper is an economically and ecologically important genus of plant that includes a fascinating array of species for studying natural history natural products chemistry community ecology and evolutionary biology The diversification of this taxon is unique and of great importance in understanding the evolution of plants The diversity and ecological relevance of this genus makes it an obvious candidate for ecological and evolutionary studies but surprisingly most research on Piper spp to date has focused on the more economically important plants P nigrum black pepper P methysticum kava and P betle betel leaf While this book does address the applied techniques of studying Piper its focus is more on Piper in its natural setting Piper A Model Genus for Studies of Phytochemistry Ecology and Evolution synthesizes existing data and provides an outline for future investigations of the chemistry ecology and evolution of this taxon while examining its key themes of Piper as a model genus for ecological and evolutionary studies the important ecological roles of Piper species in lowland wet forests and the evolution of distinctive Piper attributes This volume has a place in the libraries of those studying or working in the fields of ecology evolutionary biology natural products chemistry invasive species biology pharmaceuticals and ethnobotany

Documenting Domestication Melinda A. Zeder, Daniel Bradley, Eve Emshwiller, Bruce D. Smith, 2006-06-20 Agriculture is the lever with which humans transformed the earth over the last 10 000 years and created new forms of plant and animal species that have forever altered the face of the planet In the last decade significant technological and methodological advances in both molecular biology and archaeology have revolutionized the study of plant and animal domestication and are reshaping our understanding of the transition from foraging to farming one of the major turning points in human history This groundbreaking volume for the first time brings together leading archaeologists and biologists working on the domestication of both plants and animals to consider a wide variety of archaeological and genetic approaches to tracing the origin and dispersal of domesticates It provides a comprehensive overview of the state of the art in this quickly changing field as well as reviews of recent findings on specific crop and livestock species in the Americas Eurasia and Africa Offering a unique global perspective it explores common challenges and potential avenues for future progress in documenting domestication The Architectural Index Ervin J. Plants, People, and Culture Michael J Balick, Paul Alan Cox, 2020-08-19 Is it possible that plants have shaped the very trajectory of human cultures Using riveting stories of fieldwork in remote villages two of the world's leading ethnobotanists argue that our past and our future are deeply intertwined with plants Creating massive sea craft from plants indigenous shipwrights spurred the navigation of the world's oceans Today indigenous agricultural innovations continue to feed clothe and heal the world's population One out of four prescription drugs for example were discovered from plants used by traditional healers Objects as common as baskets for winnowing or wooden boxes to store feathers were ornamented with traditional designs demonstrating the human ability to understand our environment and to perceive the cosmos Throughout the world the human body has been used as the ultimate canvas for plant based adornment as well as indelible design using tattoo inks Plants also garnered religious significance both as offerings to the gods and as a doorway into the other world Indigenous claims that plants themselves are sacred is leading to a startling reformulation of conservation The authors argue that conservation goals can best be achieved by learning from rather than opposing indigenous peoples and their beliefs **KEY FEATURES** An engrossing narrative that invites the reader to personally engage with the relationship between plants people and culture Full color illustrations throughout including many original photographs captured by the authors during fieldwork New to this edition Plants That Harm a chapter that examines the dangers of poisonous plants and the promise that their study holds for novel treatments for some of our most serious diseases including Alzheimer's and substance addiction Additional readings at the end of each chapter to encourage further exploration Boxed features on selected topics that offer further insight Provocative questions to facilitate group discussion Designed for the college classroom as well as for lay readers this update of *Plants People and Culture* entices the reader with firsthand stories of fieldwork spectacular illustrations and a deep respect for both indigenous peoples and the earth's natural heritage
