Evolution And Escalation An Ecological History Of Life:

Evolution and Escalation Geerat J. Vermeij, 1987 Here is one biologist's interpretation of the chronology of life during the last six hundred million years of earth history an extended essay that draws on the author's own data and a wide ranging literature survey to discuss the nature and dynamics of evolutionary change in organisms and their biological surroundings Geerat Vermeij demonstrates that escalation the process by which species adapt to or are limited by their enemies as the latter increase in ability to acquire and retain resources has been a dominant theme in the history of life despite frequent episodes of extinction

Biology's First Law Daniel W. McShea, Robert N. Brandon, 2010-07-15 Life on earth is characterized by three striking phenomena that demand explanation adaptation the marvelous fit between organism and environment diversity the great variety of organisms and complexity the enormous intricacy of their internal structure Natural selection explains adaptation But what explains diversity and complexity Daniel W McShea and Robert N Brandon argue that there exists in evolution a spontaneous tendency toward increased diversity and complexity one that acts whether natural selection is present or not They call this tendency a biological law the Zero Force Evolutionary Law or ZFEL This law unifies the principles and data of biology under a single framework and invites a reconceptualization of the field of the same sort that Newton's First Law brought to physics Biology's First Law shows how the ZFEL can be applied to the study of diversity and complexity and examines its wider implications for biology Intended for evolutionary biologists paleontologists and other scientists studying complex systems and written in a concise and engaging format that speaks to students and interdisciplinary practitioners alike this book will also find an appreciative audience in the philosophy of science

Evolutionary Theory and Processes: Modern Horizons Solomon P. Wasser, 2013-03-09 Evolution is the most profound of human ideas integrating all natural phenomena cosmic biological and cultural into a continuous universal change This volume deals with evolutionary observations experiments and theories contributing to a deeper understanding of the evolutionary process th honoring the 75 birthday of Eviatar Eibi Nevo I first met Eibi in 1966 when he was a Fellow in the Museum of Comparative Zoology at Harvard University and working mostly on cricket frog vocalization and speciation in the United States His unique discovery

of pipid fossil frogs in the Israeli Early Cretaceous central Negev is possibly the largest world collection of ancient fossil frogs Our acquaintance developed into mutual friendship and admiration Since then our long lasting friendship has included a visit to Israel enabling me to follow Eibi s major scientific achievements in particular his founding of the Institute of Evolution in the University of Haifa and now the pending establishment of the International Graduate School of Evolution The research program of Eibi Nevo in collaboration with numerous colleagues and students in Israel and across the world encompasses diverse perspectives of evolutionary biology and biodiversity of genes populations species and ecosystems integrating modern and classical evolutionary approaches molecular and organismal They deal with model organisms in all forms from bacteria through plants fungi animals and humans conducted over local regional and global scales *Ammonoid Paleobiology: From macroevolution to paleogeography* Christian Klug,Dieter Korn,Kenneth De Baets,Isabelle Kruta,Royal H. Mapes,2015-07-22 This two volume work is a testament to the abiding interest and human fascination with ammonites We offer a new model to explain the morphogenesis of septa and the shell we explore their habitats by the content of stable isotopes in their shells we discuss the origin and later evolution of this important clade and we deliver hypotheses on its demise The Ammonoidea produced a great number of species that can be used in biostratigraphy and possibly this is the macrofossil group which has been used the most for that purpose Nevertheless many aspects of their anatomy mode of life development or paleobiogeographic distribution are still poorly known Themes treated are biostratigraphy paleoecology paleoenvironment paleobiogeography evolution phylogeny and ontogeny Advances such as an explosion of new information about ammonites new technologies such as isotopic analysis tomography and virtual paleontology in general as well as continuous discovery of new fossil finds have given us the opportunity to present a comprehensive and timely state of the art compilation Moreover it also points the way for future studies to further enhance our understanding of this endlessly fascinating group of organisms

Predator-Prey Interactions in the Fossil Record Patricia H. Kelley,Michal Kowalewski,Thor A. Hansen,2012-12-06 From the Foreword Predator prey interactions are among the most significant of all organism organism interactions It will only be by compiling and evaluating data on predator prey relations as they are recorded in the fossil record that we can hope to tease apart their role in the tangled web of evolutionary interaction over time This volume compiled by a group of expert specialists on the evidence of predator prey interactions in the fossil record is a pioneering effort to collate the information now accumulating in this important field It will be a standard reference on which future study of one of the central dynamics of ecology as seen in the fossil record will be built Richard K Bambach Professor Emeritus Virginia Tech Associate of the Botanical Museum Harvard University **Encyclopedia of Paleontology** Ronald Singer,2019-06-04 The Encyclopedia of Paleontology is designed to address the shortage of general reference works on both vertebrate and invertebrate paleontology and to serve the needs of students and lay persons interested in the field As the encyclopedia aims to provide basic information the majority of the 350 entries are devoted to explanations of paleontological concepts and

techniques examinations of the evolutionary development of particular organisms and biological features profiles of major discoveries and biographies of leading scientists Each entry includes an essay and a further reading list An international team of 200 leading experts in the field has prepared the illustrations and the essays which range from concise descriptions to comprehensive discussions

The Trace-Fossil Record of Major Evolutionary Events M. Gabriela Mángano, Luis A. Buatois, 2016-11-17 This volume addresses major evolutionary changes that took place during the Mesozoic and the Cenozoic These include discussions on major evolutionary radiations and ecological innovations on land and at sea such as the Mesozoic marine revolution the Mesozoic radiation of vertebrates the Mesozoic lacustrine revolution the Cenozoic radiation of mammals the evolution of paleosol biotas and the evolution of hominins The roles of mass extinctions at the end of the Triassic and at the end of the Cretaceous are assessed This volume set provides innovative reviews of the major evolutionary events in the history of life from an ichnologic perspective Because the long temporal range of trace fossils has been commonly emphasized biogenic structures have been traditionally overlooked in macroevolution However comparisons of ichnofaunas through geologic time do reveal the changing ecology of organism substrate interactions The use of trace fossils in evolutionary paleoecology represents a new trend that is opening a window for our understanding of major evolutionary radiations and mass extinctions Trace fossils provide crucial evidence for the recognition of spatial and temporal patterns and processes associated with paleoecologic breakthroughs

Macroevolution Emanuele Serrelli, Nathalie Gontier, 2015-02-13 This book is divided in two parts the first of which shows how beyond paleontology and systematics macroevolutionary theories apply key insights from ecology and biogeography developmental biology biophysics molecular phylogenetics and even the sociocultural sciences to explain evolution in deep time In the second part the phenomenon of macroevolution is examined with the help of real life history case studies on the evolution of eukaryotic sex the formation of anatomical form and body plans extinction and speciation events of marine invertebrates hominin evolution and species conservation ethics The book brings together leading experts who explain pivotal concepts such as Punctuated Equilibria Stasis Developmental Constraints Adaptive Radiations Habitat Tracking Turnovers Mass Extinctions Species Sorting Major Transitions Trends and Hierarchies key premises that allow macroevolutionary epistemic frameworks to transcend microevolutionary theories that focus on genetic variation selection migration and fitness Along the way the contributing authors review ongoing debates and current scientific challenges detail new and fascinating scientific tools and techniques that allow us to cross the classic borders between disciplines demonstrate how their theories make it possible to extend the Modern Synthesis present guidelines on how the macroevolutionary field could be further developed and provide a rich view of just how it was that life evolved across time and space In short this book is a must read for active scholars and because the technical aspects are fully explained it is also accessible for non specialists Understanding evolution requires a solid grasp of above population phenomena Species are real biological individuals and abiotic factors impact the future course of evolution

Beyond observation when the explanation of macroevolution is the goal we need both evidence and theory that enable us to explain and interpret how life evolves at the grand scale *Oxford Surveys in Evolutionary Biology* Douglas Futuyma, Janis Antonovics, 1992-10-08 This new volume in the OSEB series presents reviews of key theoretical ideas and frameworks and outlines progress in evolutionary studies Microevolution Rate, Pattern, Process Andrew P. Hendry, Michael T. Kinnison, 2012-12-06 From guppies to Galapagos finches and from adaptive landscapes to haldanes this compilation of contributed works provides reviews perspectives theoretical models statistical developments and empirical demonstrations exploring the tempo and mode of microevolution on contemporary to geological time scales New developments and reviews of classic and novel empirical systems demonstrate the strength and diversity of evolutionary processes producing biodiversity within species Perspectives and theoretical insights expand these empirical observations to explore patterns and mechanisms of microevolution methods for its quantification and implications for the evolution of biodiversity on other scales This diverse assemblage of manuscripts is aimed at professionals graduate students and advanced undergraduates who desire a timely synthesis of current knowledge an illustration of exciting new directions and a springboard for future investigations in the study of microevolution in the wild **Trophic Cascades** John Terborgh, James A Estes, 2013-06-25 Trophic cascades the top down regulation of ecosystems by predators are an essential aspect of ecosystem function and well being Trophic cascades are often drastically disrupted by human interventions for example when wolves and cougars are removed allowing deer and beaver to become destructive yet have only recently begun to be considered in the development of conservation and management strategies Trophic Cascades is the first comprehensive presentation of the science on this subject It brings together some of the world s leading scientists and researchers to explain the importance of large animals in regulating ecosystems and to relate that scientific knowledge to practical conservation Chapters examine trophic cascades across the world s major biomes including intertidal habitats coastal oceans lakes nearshore ecosystems open oceans tropical forests boreal and temperate ecosystems low arctic scrubland savannas and islands Additional chapters consider aboveground belowground linkages predation and ecosystem processes consumer control by megafauna and fire and alternative states in ecosystems An introductory chapter offers a concise overview of trophic cascades while concluding chapters consider theoretical perspectives and comparative issues Trophic Cascades provides a scientific basis and justification for the idea that large predators and top down forcing must be considered in conservation strategies alongside factors such as habitat preservation and invasive species It is a groundbreaking work for scientists and managers involved with biodiversity conservation and protection Macroecology James H. Brown, 1995-06 In Macroecology James H Brown proposes a radical new research agenda designed to broaden the scope of ecology to encompass vast geographical areas and very long time spans While much ecological research is narrowly focused and experimental providing detailed information that cannot be used to generalize from one ecological community or time period to another macroecology draws on data from

many disciplines to create a less detailed but much broader picture with greater potential for generalization Integrating data from ecology systematics evolutionary biology paleobiology and biogeography to investigate problems that could only be addressed on a much smaller scale by traditional approaches macroecology provides a richer more complete understanding of how patterns of life have moved across the earth over time Brown also demonstrates the advantages of macroecology for conservation showing how it allows scientists to look beyond endangered species and ecological communities to consider the long history and large geographic scale of human impacts An important reassessment of the direction of ecology by one of the most influential thinkers in the field this work will shape future research in ecology and other disciplines This approach may well mark a major new turn in the road in the history of ecology and I find it extremely exciting The scope of Macroecology is tremendous and the book makes use of its author s exceptionally broad experience and knowledge An excellent and important book Lawrence R Heaney Center for Environmental and Evolutionary Biology the Field Museum

Rekindling Life Baptiste Morizot,2022-06-15 As the environmental crisis accelerates we can easily feel overwhelmed but our feeling of powerlessness is partly due to a misunderstanding of the natural world We tend to think of nature as a cathedral on fire like Notre Dame engulfed in flames But the living world is not a cathedral on fire if it were the battle would already be lost The living world is itself a fire that reconstitutes itself continuously and creates countless forms of life as soon as we leave it the space and time to do so So the problem we face today is not to stop the fire rather it is how to defend and rekindle the embers of life that are all around us Drawing lessons from conservationist initiatives aimed at allowing the natural forces of forests to take over again through a process of free evolution and from agro ecological farming initiatives which make lands hospitable for wildlife Baptiste Morizot shows how specific actions can release the prodigality of life its jungle like power to regenerate itself Actions like these are possible because the power of the living world lies in its abundance and creativity the biosphere is a living fire that covers the earth and it can always start up again if we know how to defend and kindle its embers

Darwinism and Evolutionary Economics John Laurent,John Nightingale,2001-01-01 This outstanding collection of essays by leading scholars helps explain how evolutionary economics has come of age They show how evolutionary economics offers a progressive and diverse research agenda built on strong foundations These are essays of lasting value J Stanley Metcalfe University of Manchester UK Darwinism is fast becoming an orthodoxy of modern thought a framework within which a wide range of knowledge communities conduct their discourse Ever since its formation Darwinian theory has experienced a close though not always comfortable association with economics Evolutionary economists now appear to show little concern for the consistency of knowledge in their embrace of Darwinism Darwinism and Evolutionary Economics brings together contributions from eminent authors who building on Darwin s own insights and on developments in evolutionary theory offer challenging views on how economics can use evolutionary ideas effectively This collection of critical essays provides a thorough examination of the application of Darwinian theory to economic thought and

will appeal to evolutionary economists and all those with an interest in Darwin innovation and evolutionary science

Soils of the Past Gregory J. Retallack, 2019-09-10 A student friendly textbook that describes ancient soils how they may be identified and their use in paleoenvironmental reconstruction Ancient soils contain vital mineralogical geochemical textural and paleontological information about the continental environments in which they formed Advances in isotope geochemistry and sequence stratigraphic models allow evermore detailed reconstructions of environmental change from paleosols and new insights into such diverse topics as atmospheric chemistry global change paleoecology geobiology and mass extinction This book educates readers about the field of paleopedology and how it remains a key area of investigation for geologists and environmental scientists seeking to learn about and reconstruct the condition and evolution of paleoenvironments Presented in three sections Soils and Paleosols Factors in Soil Formation and Fossil Record of Soils Soils of the Past An Introduction to Paleopedology describes the main types of ancient soil procedures for identifying and studying them their classification and most significantly a wide array of examples of how paleosols have been used for paleoenvironmental reconstruction The book is an excellent reflection of the current state of knowledge and can be widely adopted over many disciplines All chapters have been revised and updated to reflect advances in soil science in the last two decades New tables display a wealth of new data added since the 2nd edition published in 2001 New figures have been added and line art has been redrawn to improve clarity and promote understanding References have been updated throughout Soils of the Past 3rd Edition is written for advanced undergraduates studying paleopedology as part of a degree in geology environmental science or physical geography and for interested professional earth scientists

Biotic Recovery from Mass Extinction Events M. B. Hart, 1996 Engl *Perfect Planet, Clever Species* William C. Burger, 2011-04-29 A masterful survey Times Literary Supplement A concise extremely well written journey about this planet s history Highly recommended Choice In a feat that may rival time travel Burger has condensed 4.5 billion years into 294 eminently readable pages as he builds a case for solitude in our Milky Way galaxy Burger writes with the clarity and humor of one who has had experience communicating complicated ideas to the lay public Boston Globe For many years the federal government funded the Search for Extraterrestrial Intelligence SETI later popularized by Carl Sagan s novel Contact and the movie starring Jodie Foster Though in actuality SETI never did make contact with signals from an alien civilization the search continues to this day through privately funded endeavors How likely is it that intelligent life exists elsewhere in the universe This is the intriguing question that has prompted William Burger s illuminating and absorbing exploration of the unusual circumstances surrounding life on earth Examining the critical episodes in our planet s early history and the peculiar trajectory of life on our world Burger shows that the long odyssey of planet Earth may be utterly unique in our galaxy For example he describes features of the sun that are far from average By some estimates 95 percent of the other stars in the Milky Way galaxy are smaller and it is unlikely that any of them could supply the energy requirements for a life sustaining planet such as our own Earth as the third planet from the sun sits within

the Goldilocks orbit it is in the perfect position to receive not too much heat like Mercury and Venus and not too little like more distant planets of the solar system but just the right amount to foster the development of life Turning to the evolution of life itself Burger points out a host of amazing accidents for example the extinction of dinosaurs and the proliferation of flowering plants that make the steps along the way to Homo sapiens seem like very rare events indeed He also calls attention to the curious fact that the early hominid brain tripled in size over the relatively short time period leading to the appearance of modern human beings Finally he notes aspects of humanity's cultural evolution that seem unlikely to have been duplicated anywhere else Burger's enlightening evaluation of evolutionary and cosmic history full of fascinating details shows that the human achievement may be unique in our galaxy More Praise for Perfect Planet Clever Species This is by far the best existing treatment of the SETI problem Based on the most recent findings of science it analyzes in full detail all the unique factors that would have to be right for success Particularly fascinating is Burger's critical study of the ten thousands of unpredictable steps in the evolution of Homo sapiens after the origin of life A splendid history of mankind Ernst Mayr Harvard University I believe that this brilliant richly documented and well written book on par in historical influence or importance with classics such as Rachel Carson's Silent Spring Paul Ehrlich's The Population Bomb E O Wilson's On Human Nature or Sarah Blaffer's Mother Nature will go down as one of the most significant philosophical guides for us to follow as we stumble blindly into the 21st Century Hugh H Iltis Emeritus Botany Professor University of Wisconsin Madison With a lively narrative and at a headlong pace Bill Burger leads us expertly from the origin of our planet through to the evolutionary history of humankind Along the way he repeatedly highlights the part played by chance occurrence of favourable conditions Such contingency means that we can reconstruct our past but not predict our future But we can address Burger's central question Are we alone Soberingly he builds up step by step to his conclusion The history of evolution on Earth is a compelling story in its own right and one that

The Ecology of the Cambrian Radiation Robert Riding, 2001 The Cambrian radiation was the explosive evolution of marine life that started 550 000 000 years ago It ranks as one of the most important episodes in Earth history This key event in the history of life on our planet changed the marine biosphere and its sedimentary environment forever requiring a complex interplay of wide ranging biologic and nonbiologic processes The Ecology of the Cambrian Radiation offers a comprehensive and surprising picture of the Earth at that ancient time The book contains contributions from thirty three authors hailing from ten countries and will be of interest to paleontologists geologists biologists and other researchers interested in the global Earth life system
