Evolution Of Agency And Other Essays:

The Evolution of Agency and Other Essays Kim Sterelny, 2001 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection Sterelny argues that genes are not the only replicators non genetic inheritance is also extremely important and is no mere epiphenomenon of gene selection The second half of the book applies some of these ideas in considering cognitive evolution Concentrating on the mental capacities of simpler animals rather than those of humans Sterelny argues for a general distinction between detection and representation and that the evolution of belief like that of representation can be decoupled from the evolution of preference These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution *Bevckelaer tegens de scherpe pijlen geschoten op de Vrede-soeckende predicanten*

,1611 **The Evolution of Agency and Other Essays** Kim Sterelny, 2000-11-13 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection while the second half applies some of these ideas in considering cognitive evolution These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution *The Cambridge*

Companion to Darwin Michael Jonathan Sessions Hodge, 2009-03-05 This volume provides the reader with clear lively and balanced introductions to the most recent scholarship on Darwin and his intellectual legacies **Information and**

Meaning in Evolutionary Processes William F. Harms, 2004-04-26 This book is intended to help transform epistemology the traditional study of knowledge into a rigorous discipline by removing conceptual roadblocks and developing formal tools required for a fully naturalized epistemology The evolutionary approach which Harms favours begins with the common observation that if our senses and reasoning were not reliable then natural selection would have eliminated them long ago The challenge for some time has been how to transform these informal musings about evolutionary epistemology into a rigorous theoretical discipline capable of complementing current scientific studies of the evolution of cognition with a philosophically defensible account of meaning and justification **Adaptationism and Optimality** Steven Hecht

Orzack, Elliott Sober, 2001-06-04 The debate over the relative importance of natural selection as compared to other forces affecting the evolution of organisms is a long standing and central controversy in evolutionary biology The theory of adaptationism argues that natural selection contains sufficient explanatory power in itself to account for all evolution However there are differing views about the efficiency of the adaptation model of explanation If the adaptationism theory is applied are energy and resources being used to their optimum This book presents an up to date view of this controversy and reflects the dramatic changes in our understanding of evolution that have occurred in the last twenty years The volume

combines contributions from biologists and philosophers and offers a systematic treatment of foundational conceptual and methodological issues surrounding the theory of adaptationism The essays examine recent developments in topics such as phylogenetic analysis the theory of optimality and essential models and methods of testing models Philosophy and Biodiversity Markku Oksanen, Juhani Pietarinen, 2004-09-06 This important collection focuses on the nature and importance of biodiversity The concept is clarified and its intrinsic and instrumental value are discussed Even though the term biodiversity was invented in the 1980s to promote the cause of species conservation discussions on biological diversity go back to Plato There are many controversies surrounding biodiversity and a few of them are examined here What is worthy of protection or restoration and what is the acceptable level of costs Is it permissible to kill sentient animals to promote native populations Can species be reintroduced if they have disappeared a long time ago How should the responsibilities for biodiversity be shared This book will be of interest to philosophers of science and biologists but also to anyone interested in conservation and the environment

The Routledge Handbook of Philosophy of Agency Luca Ferrero, 2022-01-26 One of the most basic and important distinctions we draw is between those entities with the capacity of agency and those without As humans we enjoy agency in its full blooded form and therefore a proper understanding of the nature of agency is of great importance to appreciate who we are and what we should expect and demand of our existence The Routledge Handbook of Philosophy of Agency is an outstanding reference source to the key issues problems and debates in this exciting subject and is the first collection of its kind Comprising 42 chapters by an international team of contributors the Handbook is divided into eight clear parts The Metaphysics of Agency Kinds of Agency Agency and Ability Agency Mind Body and World Agency and Knowledge Agency and Moral Psychology Agency and Time Agency Reasoning and Normativity A broad range of topics are covered including the relation of agency to causation teleology animal agency intentionality planning skills disability practical knowledge self knowledge the will responsibility autonomy identification emotions personal identity reasons morality the law aesthetics and games The Routledge Handbook of Philosophy of Agency is essential reading for students and researchers within philosophy of action philosophy of mind metaphysics philosophy of psychology and ethics Naturalized Epistemology and Philosophy of Science Chienkuo Mi, Ruey-lin Chen, 2007 Much has happened in the field of contemporary epistemology since Quine's Epistemology Naturalized was published in 1969 Even before Ronald Giere published his article Philosophy of Science Naturalized naturalized philosophy of science had been influenced by the so called historical approach Kuhn Lakatos Feyerabend and Laudan all contributed importantly to this trend In this light it has emerged without a doubt that philosophy of science is closely related to epistemology This volume explores some of the relevant relations and will be of interest to epistemologist and philosophers of science *The Order of Public Reason* Gerald Gaus, 2010-12-13 In this innovative and important work Gerald Gaus advances a revised and more realistic account of public reason liberalism showing how in the midst of fundamental disagreement about values and moral beliefs we can achieve a moral and political order that treats all

as free and equal moral persons The first part of this work analyzes social morality as a system of authoritative moral rules Drawing on an earlier generation of moral philosophers such as Kurt Baier and Peter Strawson as well as current work in the social sciences Gaus argues that our social morality is an evolved social fact which is the necessary foundation of a mutually beneficial social order The second part considers how this system of social moral authority can be justified to all moral persons Drawing on the tools of game theory social choice theory experimental psychology and evolutionary theory Gaus shows how a free society can secure a moral equilibrium that is endorsed by all and how a just state respects and develops such an equilibrium

Philosophy of Experimental Biology Marcel Weber, 2004-08-30 Philosophy of Experimental Biology explores some central philosophical issues concerning scientific research in experimental biology including genetics biochemistry molecular biology developmental biology neurobiology and microbiology It seeks to make sense of the explanatory strategies concepts ways of reasoning approaches to discovery and problem solving tools models and experimental systems deployed by scientific life science researchers and also integrates developments in historical scholarship in particular the New Experimentalism It concludes that historical explanations of scientific change that are based on local laboratory practice need to be supplemented with an account of the epistemic norms and standards that are operative in science This book should be of interest to philosophers and historians of science as well as to scientists

Minds and Persons Anthony O'Hear, 2003-08-25 The nature of the mind and of consciousness the reality of freedom the concept of agency and the relation of language to the mental are all basic perennial philosophical issues They are some of the topics pursued in these original essays by leading thinkers in the field of the contemporary philosophy of mind and action The essays are based on the lectures given in The Royal Institute of Philosophy's annual lecture series for 2001 2002

What Functions Explain Peter McLaughlin, 2000-12-18 This 2001 book offers an examination of functional explanation as it is used in biology and the social sciences and focuses on the kinds of philosophical presuppositions that such explanations carry with them It tackles such questions as why are some things explained functionally while others are not What do the functional explanations tell us about how these objects are conceptualized What do we commit ourselves to when we give and take functional explanations in the life sciences and the social sciences McLaughlin gives a critical review of the debate on functional explanation in the philosophy of science He discusses the history of the philosophical question of teleology and provides a comprehensive review of the post war literature on functional explanation What Functions Explain provides a sophisticated and detailed Aristotelian analysis of our concept of natural functions and offers a positive contribution to the ongoing debate on the topic

Global Overshoot Doug Cocks, 2013-03-13 Global Overshoot is a multidisciplinary analysis including history and pre history from an ecological and evolutionary perspective of the contemporary world system This book compares and critiques attitudes held by people with different world views to the hypothetical prospect of large widespread falls in quality of life It also draws insights from these two analyses to develop and suggest a philosophy of

Ecohumanism to people of good will who want to think constructively about the world's converging problems i.e. think altruistically and think like an evolving ecosystem

Natural Born Monads Andrea Altobrando, Pierfrancesco Biasetti, 2020-10-12 We are still looking for a satisfactory definition of what makes an individual being a human individual. The understanding of human beings in terms of organism does not seem to be satisfactory because of its reductionistic flavor. It satisfies our need for autonomy and benefits our lives thanks to its medical applications but it disappoints our needs for conscious and free self-determination. For similar reasons i.e. because of its anti-libertarian tone an organicistic understanding of the relationship between individual and society has also been rejected although no truly satisfactory alternative for harmonizing individual and social wellness has been put forth. Thus a reassessment of the very concepts of individual and organism is needed. In this book the authors present a specific line of thought which started with Leibniz's concept of monad in 17th century, continued through Kant and Hegel and as a result reached the first Eastern country to attempt to assimilate as well as confront with Western philosophy and sciences i.e. Japan. The line of thought we are tracing has gone on to become one of the main voices in current debates in the philosophy of biology as well as philosophical anthropology and social philosophy. As a whole the volume offers a both historical and systematic account of one specific understanding of individuals and their environment which tries to put together its natural embedding as well as its dialectical nature. Such a historical systematic map will also allow to better evaluate how life sciences impact our view of our individual lives, of human activities, of institutions, politics and finally of humankind in general.

Discovering Cell Mechanisms William Bechtel, 2006 Between 1940 and 1970 pioneers in the new field of cell biology discovered the operative parts of cells and their contributions to cell life. They offered mechanistic accounts that explained cellular phenomena by identifying the relevant parts of cells, the biochemical operations they performed and the way in which these parts and operations were organised to accomplish important functions. Cell biology was a revolutionary science but in this book it also provides fuel for yet another revolution, one that focuses on the very conception of science itself. Laws have traditionally been regarded as the primary vehicle of explanation but in the emerging philosophy of science it is mechanisms that do the explanatory work. Bechtel emphasises how mechanisms were discovered, focusing especially on the way in which new instruments made these inquiries possible. He also describes how new journals and societies provided institutional structure to this new enterprise.

The Science of the Struggle for Existence Gregory J. Cooper, 2003-10-27 This book is a sustained examination of issues in the philosophy of ecology that have been a source of controversy since the emergence of ecology as an explicit scientific discipline. The controversies revolve around the idea of a balance of nature, the possibility of general ecological knowledge and the role of model building in ecology. *The Science of the Struggle for Existence* is also a detailed treatment of these issues that incorporates both a comprehensive investigation of the relevant ecological literature and the development of an explicit theoretical framework in the philosophy of science. It addresses issues in the philosophy of ecology that are of

particular importance for the deployment of ecology in the solution of environmental problems It will have a cross disciplinary appeal and will interest students and professionals in science the philosophy of science and environmental studies as well as policy makers

The Changing Role of the Embryo in Evolutionary Thought Ron

Amundson,2005-03-14 In this book Ron Amundson examines two hundred years of scientific views on the evolution development relationship from the perspective of evolutionary developmental biology evo devo This perspective challenges several popular views about the history of evolutionary thought by claiming that many earlier authors had made history come out right for the Evolutionary Synthesis The book starts with a revised history of nineteenth century evolutionary thought It then investigates how development became irrelevant with the Evolutionary Synthesis It concludes with an examination of the contrasts that persist between mainstream evolutionary theory and evo devo This book will appeal to students and professionals in the philosophy and history of science and biology

NEITHER MIND NOR BRAIN CJ ROY,2020-12-12 This book is an interdisciplinary theoretical effort to explain the mind body problem Conscious mind is the hard problem to be explained and is the utmost existential question for any scientific mind Neither a reductionist identity theory nor a commonsense religious dualism can answer the problem Human cognitive system can have a natural explanation rather than a religious description To reduce the mind as what the brain does is too premature and to separate the mind and brain as two independent realities is too trivial The hypothesis of the book identifies the conscious mind with the emergent functionality of the human brain And this is definitely an approximate guess This informed guess is a challenge to many previously established theories and is an invitation for further research It demystifies the age old homunculus mind and does not explain it away To elaborate the theme the author has incorporated themes such as complex system dynamics evolution cosmology thermodynamics information and emergence The philosophical discussion on the first three chapters govern as an intuitive background for the theoretical development in further chapters It affirms that the mind and brain are neither two dichotomized substances nor are they one and same substance Chapters from four to eight deal with various themes from natural science with respect to the theme of mind brain they involve system dynamics cosmology thermodynamics evolutionary theory and information model Last chapter assimilates the discussions of previous chapters to propose the key hypothesis of the book viz mind brain is the emergent functionality of the human brain which is the matter energy information complex system The universe which itself is a matter energy information system at least in one occasion becomes conscious of itself through humans

The Philosophy of Biology Marjorie Grene,David Depew,2004-08-02

Is life different from the non living If so how And how in that case does biology as the study of living things differ from other sciences These questions are traced through an exploration of episodes in the history of biology and philosophy The book begins with Aristotle then moves on to Descartes comparing his position with that of Harvey In the eighteenth century the authors consider Buffon and Kant In the nineteenth century the authors examine the Cuvier Geoffroy debate pre Darwinian geology

and natural theology Darwin and the transition from Darwin to the revival of Mendelism Two chapters deal with the evolutionary synthesis and such questions as the species problem the reducibility or otherwise of biology to physics and chemistry and the problem of biological explanation in terms of function and teleology The final chapters reflect on the implications of the philosophy of biology for philosophy of science in general
