Evolution Of Culture In Animals:

The Evolution of Culture in Animals John Tyler Bonner, 2018-06-05 Animals do have culture maintains this delightfully illustrated and provocative book which cites a number of fascinating instances of animal communication and learning John Bonner traces the origins of culture back to the early biological evolution of animals and provides examples of five categories of behavior leading to nonhuman culture physical dexterity relations with other species auditory communication within a species geographic locations and inventions or innovations Defining culture as the transmission of information by behavioral rather than genetical means he demonstrates the continuum between the traits we find in animals and those we often consider uniquely human

A Different Kind of Animal Robert Boyd, 2017-11-07 How our ability to learn from each other has been the essential ingredient to our remarkable success as a species Human beings are a very different kind of animal We have evolved to become the most dominant species on Earth We have a larger geographical range and process more energy than any other creature alive This astonishing transformation is usually explained in terms of cognitive ability people are just smarter than all the rest But in this compelling book Robert Boyd argues that culture our ability to learn from each other has been the essential ingredient of our remarkable success A Different Kind of Animal demonstrates that while people are smart we are not nearly smart enough to have solved the vast array of problems that confronted our species as it spread across the globe Over the past two million years culture has evolved to enable human populations to accumulate superb local adaptations that no individual could ever have invented on their own It has also made possible the evolution of social norms that allow humans to make common cause with large groups of unrelated individuals a kind of society not seen anywhere else in nature This unique combination of cultural adaptation and large scale cooperation has transformed our species and assured our survival making us the different kind of animal we are today Based on the Tanner Lectures delivered at Princeton University A Different Kind of Animal features challenging responses by biologist H Allen Orr philosopher Kim Sterelny economist Paul Seabright and evolutionary anthropologist Ruth Mace as well as an introduction by Stephen Macedo

outside the academy His book will provoke equally potent debates today and is a key component of any course or reading list in anthropological or archaeological theory and cultural ecology The Oxford Handbook of Comparative Evolutionary Psychology Jennifer Vonk, Todd K.
