Some Assembly Required Neil Shubin, 2020-03-17 An exciting and accessible new view of the evolution of human and animal life on Earth From the author of national bestseller *Your Inner Fish* this extraordinary journey of discovery spans centuries as explorers and scientists seek to understand the origins of life s immense diversity

Fossils DNA scientists with a penchant for suits of armor what s not to love BBC Wildlife Magazine Over billions of years ancient fish evolved to walk on land reptiles transformed into birds that fly and apelike primates evolved into humans that walk on two legs talk and write For more than a century paleontologists have traveled the globe to find fossils that show how such changes have happened We have now arrived at a remarkable moment prehistoric fossils coupled with new DNA technology have given us the tools to answer some of the basic questions of our existence How do big changes in evolution happen Is our presence on Earth the product of mere chance This new science reveals a multibillion year evolutionary history filled with twists and turns trial and error accident and invention In *Some Assembly Required* Neil Shubin takes readers on a journey of discovery spanning centuries as explorers and scientists seek to understand the origins of life s immense diversity

Emergent Forms Eugene Curtis Goldfield, 1995 While it is often assumed that behavioral development must be based upon both physical law and the biological principles of morphogenesis and selection forging a link between these phenomena has remained an elusive goal Now in *Emergent Forms* psychologist Eugene C Goldfield offers an exciting new theoretical framework based in part on the concept of self organization that promises to aid researchers in their quest to discover the underlying origins and processes of behavioral development Addressing the question of how familiar human functional acts such as eating walking manipulating objects and smiling emerge during infancy Goldfield proposes that during perceptually guided spontaneous activity a variety of biodynamic devices for doing different kinds of work are assembled and adapted to specific tasks Throughout the theory is examined in the context of development and extended to atypical development and other domains such as cognition and language The author also addresses many long standing issues in behavioral development including the apparent disappearance of so called primitive behaviors the emergence of new skills and the role of the caregiver in skill acquisition The author concludes his work by discussing how the implications of this research can be applied to understanding abnormal development in children who are motor impaired Interdisciplinary in scope and accessible to a broad range of readers *Emergent Forms* will fascinate students and researchers of ecological developmental evolutionary and cognitive psychology

Craniofacial Sutures D. P. Rice, P. T. Sharpe, 2008-02-04 Sutures are more than just fibrous joints between the bones in our skull They are active growth sites that influence the development growth and shaping of our face and cranium When suture development is disrupted craniosynostosis can result a condition which is characterized by the premature closure of one or more cranial sutures before brain growth is complete and leads to an abnormally shaped skull In this publication leading experts in the field both researchers and clinicians discuss suture morphogenesis from developmental evolutionary and genetic perspectives In addition an appraisal of the molecular etiology clinical presentation and treatment of craniosynostosis is presented as well as an outlook to future areas of study and to innovative therapeutic philosophies In this volume craniofacial developmental and evolutionary biologists oral and maxillofacial surgeons orthodontists as well as pediatric and plastic surgeons will find a wealth of recent information on the field of craniofacial

development deformity and its treatment *Vertebrates* Kenneth V. Kardong,1998 **Terrestrial Ecosystems Through Time** Anna K. Behrensmeyer,1992-08-15 Breathtaking in scope this is the first survey of the entire ecological history of life on land from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture By providing myriad insights into the unique ecological information contained in the fossil record it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History Smithsonian Institution and twenty six additional researchers this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary paleoecology Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct organisms and the communities in which they lived The remaining three chapters treat the history of terrestrial ecosystems through geological time emphasizing how ecological interactions have changed the rate and tempo of ecosystem change the role of exogenous forcing factors in generating ecological change and the effect of ecological factors on the evolution of biological diversity The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History Smithsonian Institution Vocalize to Localize Christian Abry,Anne Vilain,Jean-Luc Schwartz,2009-05-20 Vocalize to Localize Meerkats do it for specific predators And babies point with their index finger toward targets of interest at about nine months well before using language specific that demonstratives With what interrogatives they are universal and as relativizers and complementizers play an important role in grammar construction Some alarm calls in nonhumans display more than mere localization semantics and even syntax Instead of telling another monomodal story about language origin in this volume advocates of representational gestures semantically transparent but with a problematic route toward speech meet advocates of speech with a problematic route toward the lexicon The present meeting resulted in contributions by 23 specialists in the behaviour and brain of humans including comparative studies in child development and nonhuman primates aphasiology and robotics The near future will tell us if the present crosstalk between researchers in auditory and in visual communication systems will lead to a more integrative framework for understanding the emergence of babbling and pointing two types of neural control whose coordination could pave the way toward the word and syntax The contributions to this volume were previously published as *Interaction Studies* 5 3 2004 and 6 2 2005 **Biological Shape Analysis - Proceedings Of The 3rd International Symposium** Pete E Lestrel,2015-06-11 The proceedings were designed to bring together researchers who share a common interest in the quantitative description of the biological form Participants came from very diverse disciplines such as agricultural genetics botany entomology forensics human anatomy paleontology human evolution primatology dentistry etc The participants applied various methodological approaches that are being increasingly used to describe aspects of the biological form These techniques include neural

networks Fourier descriptors shape mapping genome wide association studies GWAS Riemann curves surface mapping etc A number of the contributions in the proceedings represent state of the art research that reflects advances in that discipline
